Let me read from the report of the Board of State Charities some facts as to the present condition of the poor-houses of this State. I will not say the jails of this State, for they are, as a whole, bad beyond contemplation or statement; and yet, as bad as they are, they also are capable of immense improvements in their administration. In regard to the poor-houses of the State and the jails of the State where women are sent, let me present to this House, not to arouse its sympathy but to excite its attention, with a view of securing the reform contemplated in the proposed law, what are some of the facts in some of the counties of this State as presented by the Board of State Charities. I will begin with the county where we are sitting as a legislative body. In the Albany County poor-house is, or was, a single woman, forty years old, of foreign birth, and nine years in the United States, who is the mother of seven illegitimate children; the woman most degraded and debased, and soon again to become a mother. And this county is no worse than the rest, with perhaps here and there an exception. These women are sentenced to jail for a short time or sent for a short period to the poor-house. They are soon discharged, commit the same crimes over and over again, and are sentenced again to the poor-house or jail and discharged, to become again and again a charge upon the county or State. So that this mother, and not the mother alone, but all her illegitimate children, become a tax upon the county. Then there is Chautauque County. In the poor-house is a woman, as I read, fifty-five years old, admitted at the age of twenty-two as a vagrant, said to have been married, but the whereabouts of her husband is unknown. She too has been discharged from the poor-house and returned immediately for the past thirty-three years, during which time she has had six illegitimate children, all becoming a charge upon the county. Then there is

Cortland County, with an unmarried woman twenty-seven years old, with an infant child, who has been the mother of four illegitimate children; and four of her sisters are also in the same dependent condition and with the same number of illegitimate children, all becoming a charge upon the county. My friends, I see some of you looking at this and that county, to this member and that member, as if their own constituents were not here. They need not make any exceptions; for if they will examine their own poor-house records, they will find about each and every one of them very much in the same condition. Here is the Essex County poor-house, with a black woman, a widow, aged forty-five years, with a daughter, single, aged twenty-four years, and her grandson four years old, illegitimate and born in the house. The first has been the mother of ten children, seven of them illegitimate; the second has had three illegitimate children; and both mother and daughter are unmarried, and both year after year are returned to this poor-house to be supported, over and over again, by the county. In Greene County a vagrant unmarried woman, forty years old, became an inmate when twenty-one years of age; that is, this woman has been for nineteen years off and on returned to this poor-house, and without any hope of reform, and, perhaps, because there was no place for reform; she goes out like the rest from time to time, but soon returns, and will doubtless continue a public burden for life; and this woman, too, is the mother of five illegitimate children. In the Herkimer County poor-house a single woman, aged sixty-four years, twenty of which have been spent in the poor-house, has six of these same unfortunate children. In the Montgomery County poor-house a woman twenty years old, illegitimate, uneducated, and vagrant, has two illegitimate children; and she, to make wretchedness more intolerable, recently married an intemperate, dissolute man, formerly a pauper, and husband, wife, and child have all become a charge upon the county. In the Rockland County poor-house is an unmarried woman, forty-two years of age; for eleven years she has been an inmate, and she has four illegitimate children, and the mother is unmarried and a vagrant. These, Mr. Chairman, are specimens of the respective county poor-houses of the State relating to females alone.

The bill passed the Assembly by 80 yeas to 7 nays, but failed to become a law.

The first two years of prison management under the reformed system terminated on March 1, 1879. The results of that period, as compared with the results of the last two years under the inspector system, were as follows:

MARCH 1, 1876, TO MARCH 1, 1877, LAST TWO YEARS UNDER INSPECTOR SYSTEM.

PRISONS.	Expenses.	Earnings.
Sing Sing.....	\$650,908 47	\$257,568 71
Auburn.....	383,713 11	152,770 61
Clinton.....	518,895 88	193,241 29
Total.....	\$1,553,517 26	\$603,580 61
Deficiency in two years under the old system..	\$957,321 85

MARCH 1, 1877, TO MARCH 1, 1879, FIRST TWO YEARS UNDER SUPERINTENDENT SYSTEM.

PRISONS.	Expenses.	Earnings.
Sing Sing.....	\$400,302 91	\$418,908 79
Auburn.....	393,109 60	224,948 18
Clinton.....	231,446 88	97,681 90
Total.....	\$934,858 83	\$741,488 57
Deficiency in two years under the reform system.....	\$193,370 26

This shows a decrease in expenditures of \$626,558.13 in two years, and an increase in earnings of \$137,892.96, or a total gain to the State Treasury of \$764,451.09. The average number of convicts during the two years ending March 1, 1877, was 3,455, and during the two years ending March 1, 1879, 3,572.

The first year of the management of the State canals by a Superintendent instead of Canal Commissioners terminated on February 1, 1879. The results were as follows:

1878—BY SUPERINTENDENT.	
Extraordinary repairs.....	\$2,317 00
General expenditures.....	10,470 49
Salaries and travel.....	16,632 04
Eastern Division.....	176,436 15
Middle Division.....	140,818 17
Western Division.....	121,894 16
	\$468,068 01
Days of navigation, 1878.....	237
Tolls received, 1878.....	\$993,348 00
1877—BY CANAL COMMISSIONERS.	
Extraordinary repairs.....	\$77,132 25
Salaries and travel.....	9,933 41
Eastern Division.....	424,978 36
Middle Division.....	167,040 72
Western Division.....	213,962 87
	\$993,007 51
Days of navigation, 1877.....	214
Tolls received, 1877.....	\$850,596 00
RESULTS.	
Reduction in expenses for year ending February 1, 1879, over year ending February 1, 1878.....	\$425,029 50
Increase in tolls (1878).....	112,452 00

These returns include the Erie, Champlain, Oswego, Cayuga and Seneca, Black River, Genesee Valley, Chenango, and Chemung Canals. The success of the new system, which consisted in placing them under one responsible head, was admitted by all parties. The Superintendent in his report makes the following suggestions to the cities of Buffalo and New York for the improvement of the commerce of the Erie Canal. To Buffalo he says: "Provide a low fixed rate of harbor and commission charges on all incoming and outgoing canal freight." And to New York: "Increase your terminal facilities to a capacity whereby the cargoes of canal-boats can be unloaded more quickly and cheaply in your harbor, and ocean-going vessels receive their grain cargoes with greater convenience and dispatch."

A bill was before the Assembly to provide for the tunneling of the Hudson River from Jersey City to New York, and for a grand central underground depot in New York to which all the railroads entering the city would be compelled to run.

Another bill which passed the Legislature defined tramps to be "all transient persons who rove about from place to place, and all vagrants living without labor or visible means of support, who stroll over the country without lawful occasion." The law further says that any act of vagrancy, by any person not a resident of the State, shall be evidence that the person committing the same is a tramp within the meaning of the act, and any person who shall be deemed to be a tramp shall be liable to punishment of not more than one

year's confinement at hard labor in a county jail or a penitentiary.

Charges were transmitted to the Senate by the Governor against John F. Smyth, Superintendent of Insurance. They related to maladministration in reference to the Atlantic Mutual Life and Globe Mutual Life Insurance Companies. When the subject came before the Senate, the charges were not sustained.

A bill to amend the charter of Brooklyn, which the Governor designated as pluralism, and defined as "a plan by which a man can draw the salaries of two offices and neglect the duties of one," was vetoed by him. Daniel O'Reilly, an Alderman of Brooklyn, was elected a member of Congress. His friends desired that he should hold both offices; a general act was presented and passed both Houses without a dissentient vote to change the organic law of the city, having half a million population, for the convenience of one of them. Such was the bill.

A bill was passed appropriating \$8,000, being the award made by the Board of Audit to Terence O'Neil Donnelly for damages sustained by false imprisonment. The case is too peculiar to be passed. Mr. Donnelly was a builder of houses in South Brooklyn. He purchased lots, built houses upon them, and sold them. He was regarded as an honest and industrious man, a public-spirited citizen, and a kind husband and father. His occupation required some outlay and more credit, with diligence and foresight. He owned one of the houses in a block he built. It was worth \$9,000, and had a \$4,500 mortgage on it. He maintained his family in plain comfort, in a house of that quality. As inmates of his house were two persons considerably his junior in years. Their relations with him were casual and on a slight business understanding only. The perpetration of a forgery was traced home to them. On being apprehended, it was schemed out for them to exhibit themselves as tools rather than principals. They were instructed to swear that Mr. Donnelly was the instigator and procurer of their crime, and the one who profited by it. They did so. Mr. Donnelly was arraigned, was very hurriedly tried, lost several advantages which defendants generally have, and, against his own protestations of innocence and the proof of his theretofore exemplary character, he was convicted and sentenced to a term of imprisonment. The men who swore the crime on him received the minor degree of punishment they sought. What happened to Mr. Donnelly is summed up in the fact that he went to prison. To his family this happened: They had to move from their homestead into a tenement, and were there in want. They had to withdraw the children from school, as their fellow pupils taunted them with their father's degradation. The man who had the mortgage on the house foreclosed it, and bought the house in for \$200 under the face of the mortgage, and the mortgage was only one half

the cost of the property. After this had befallen him, the persistent effort of Mr. Donnelly to prove the innocence he had always declared had this result: The two offenders were, unknown to each other, carefully examined. Their object having been accomplished, each, unknown to the other, told the same story. They said they had lied on the stand, on legal advice, being told if they would swear they were merely accessories their punishment would be lightened and their victim would get the main punishment. They swore the offense on Mr. Donnelly, though he was wholly innocent. The further evidence of handwriting confirmed this confession, outside of their statements. They also showed where the money that remained could be had. It was found there. On this state of facts, Governor Robinson pardoned Mr. Donnelly. The moral, social, and business injury done him gave much interest to his case. After consideration, the Legislature, on April 18, 1879, passed an act authorizing Mr. Donnelly to present a claim to the State Board of Audit for the damages sustained by him by reason of his improper conviction and imprisonment on false testimony, for the alleged crime of forgery. By the same act, the Board of Audit was authorized to hear and pass on said claim, and to award such compensation for the damages sustained by Mr. Donnelly, in consequence of such conviction and imprisonment, as should appear to be just and reasonable. The Governor signed the bill. The Board of Audit, by ample testimony, established the facts above stated. Mr. Donnelly proved by twenty witnesses his good character, after having shown the injustice done him and his. He then proved completely a direct loss of \$8,000 in property and loss of time, etc., as if the case had been a technical one between him and another man, before a jury, and a consequential loss of \$22,000 more. The Board of Audit allowed only the direct legal loss of \$8,000. The Legislature voted the money. The allowance was opposed by the First Deputy Attorney-General as dangerous as a precedent; he declared it was untenable except under the special act on which the Board was acting; that that act made the allowance of any award discretionary and not mandatory; that the act itself was a circumvention of the general prohibition that the Legislature should not audit or allow private claims against the State; that the allowance of any damages would open an infinitely wide door of expense and abuse.

The question, Is a State bound to pay prospective profits under the form of damages on the change of a contract? was decided by the Governor in the negative by his refusal to approve an item of \$65,000 in the general appropriation bill. After some progress had been made on the State Reformatory at Elmira, the Legislature, dissatisfied with the manner in which it was being carried on and the unexpectedly large expenditures incurred and likely

to be incurred, passed an act in effect putting an end to the progress of the work under the contract which had been entered into by the commissioners, and adopting a new and more satisfactory method of completing it. The contractors were fully paid for all that they had done and all the materials that they had furnished, and suffered no loss whatever at the hands of the State. The claim made by the assignee of the contractor was not for any actual loss, but solely for the prospective and uncertain profits he might have made if permitted to go on with the work. In vetoing the item the Governor said: "I hold that a sovereign State, in the discharge of its powers and duties as an independent government, is at all times at full liberty to change its policy in regard to any public building in which the whole State has an interest; and that if, upon such change by a public law, it takes care to prevent any actual loss to a contractor and keeps him entirely whole, it does all which it is in good faith bound to do. Parties who contract with the government know full well when they do so that it has, and must have, the right to exercise the power of changing its policy and its course of procedure in public affairs. It is not reduced to the level of an individual engaged in private business in this respect, and can not be held liable as such. This inherent right of the government becomes, therefore, in fact a part of the contract." The opinion of the Attorney-General was also taken, who maintained the same view, and enforced it by reference to the state of the law relative to public officers removed from office. He said:

In constructing public works the State acts as a sovereign. It exercises for that purpose its sovereign powers of taxation and of eminent domain. It acts for the whole public and not for private benefit. It employs agencies for such purposes as it creates, and provides and abolishes compensation for official agencies for the administration of public affairs; and, except where restrained by constitutional provisions, the will of the people, as expressed through the Legislature and the forms of law, is supreme. It has been accordingly held by the Court of Appeals that the act of 1874 was a legitimate exercise of legislative power. It was an expression of the will of the sovereign that the public interests required changes in the construction of the Reformatory and the superintendence and method of the work. In the case of public officers (in the absence of constitutional restrictions), the State may employ and dismiss them at pleasure, may increase or diminish their compensation, or abridge their terms of office. Although a public office is in the nature of a contract between the incumbent and the public, the incumbent has no vested title and no legal claim for damages by reason of the abrogation of his office or diminution of his compensation. Upon this question the Supreme Court of the United States has said:

"The promised compensation for services actually performed and accepted, during the continuance of the particular agency, may undoubtedly be claimed, both upon principles of compact and of equity; but to insist beyond this on the perpetuation of a public policy either useless or detrimental, and upon a reward for acts neither desired nor performed, would appear to be reconcilable with neither common justice nor common sense. The establishment of such a principle would arrest necessarily everything like progress or improvement in government. . . . It follows, then,

upon principle, that, in every perfect or competent government, there must exist a general power to enact and to repeal laws, and to create and change or discontinue the agents designated for the execution of those laws." (10 Howard, U. S., 416.)

The same principle has been sustained by the Court of Appeals of this State. (1 Selden, 285.) This principle applies with equal force to public works by the State and to the agencies employed in their construction, whether by contract or otherwise.

The right of the State to continue or discontinue public works, to change or abrogate the methods for their construction, and to employ and dismiss agents necessary for that purpose, must exist, or its power to act as a sovereign is ineffectual. If this power exists, there can be no breach of a contract entered into by the State for the construction of a public work, for the right of the State to suspend work and to make any desired change is implied in every such undertaking. No claim for future profits can therefore arise. The State performs its obligation by making full compensation. The Court of Claims at Washington rejects claims of this character against the United States Government, and the Supreme Court of the United States in a recent case (decided October, 1877) has applied the same principle. (McKee vs. United States.)

The question of the respective merits of the district or the township system of common schools was raised before the Legislature by the State Superintendent. The common-school system of the State, which has been in force for many years, is considered as hardly surpassed, if equaled, in excellence elsewhere. Under this system, the territory of the State is divided into school districts of convenient size, so that children of school age can get to school without subjecting them to inconvenience in walking too far. It is a system in the country that reaches more children than any other. The people of every school district have a right to elect their own trustee or trustees, and they have a right to build their own schoolhouses to suit their taste and convenience. In favor of this system, it was urged that the people of each district had a right to control their own schools, and that the further the schools were removed from the control of the people, the less interest they would take in them; and, if the people lose all interest in the schools, they will retrograde. If the township system was adopted, the control would be placed in the hands of a town board elected at the annual town meetings. The consequence might be that the management of the schools would be carried into politics and made a political question. Soon the Legislature would be urged, under this system, to pass a law to establish a central high school in every town at the expense of the tax-payers. Those living near the high school, it was urged, would receive the most benefit of that school, while it would lower the standard of the other schools in the town, etc. The State Superintendent thus explains his proposition: "I recommend that the Legislature abolish the present system of school districts, and in its place establish the township system. Let all the schools of the town be under the care and direction of a board of education to be elected at the annual town meeting; the amount of tax necessary to be raised

for the support thereof, after the application of the public money thereto, be levied as a town tax; the powers now vested in the trustees of school districts given to town boards of education, with such additions as wisdom and necessity may dictate; and that the powers now vested in the inhabitants at district meetings be transferred to voters at town meetings, with such modifications and extensions as they may deem expedient. With such a system properly organized and in thorough working order, I predict that the cause of education in the State of New York will be greatly advanced." No change has yet been made.

The report of the State Engineer on railroads for the year 1878 was sent to the Legislature in March. During the year twenty-six corporations were formed, and twenty became extinct. Of 862 railroads organized under the laws of the State, but 275 remain in existence. At the time required by law (December 1st) 109 companies failed to report, and thereby rendered themselves liable to a penalty of \$250, and \$25 dollars per day until the report was received. The capital stock of the steam-railroads reporting in the State was \$392,164,754.25, and the proportion for the State of pro-rating the roads lying partly in the State and adjoining States was \$287,826,957.05, being an increase in the total aggregate of \$7,255,616.49. There have been built 107 miles of steam and 8 miles of horse railroads during the year. The number of passengers carried during the year by the steam roads was 48,769,084, an increase of 8,756,863, and each passenger traveled an average of 20.84 miles. The horse-railroads carried 244,290,364 passengers, an increase of 5,748,628. The number of tons of freight carried by the steam roads was 38,320,573, an increase of 3,335,792. The records of accidents upon the steam roads for the year show 322 persons killed and 567 injured, a total of 887. Of those killed, 11 were passengers, 88 employees, and 223 others. The total horse-railroad accidents were 155, of which 44 were fatal; 5 of those killed were passengers, 9 employees, and 30 others.

The State tax-levy for 1879 was less by 0.37 of a mill than that of the previous year. The total reduction was \$263,193.

A code of procedure and a code of substantive law were both passed by the Legislature and vetoed by the Governor.

The policy of the statute of the State relating to savings banks, as explained by the Attorney-General, is to exclude from the management of the bank trust all persons who have any pecuniary relations with a bank or with a borrower from a bank which might induce a lack of vigilance as trustee, or antagonize duty by private interest. He says: "The only rule of safety, therefore, for all cases, in the different forms in which they may arise, is to adhere rigidly to the policy indicated by the statute, to deem as ineligible for the position of trustee or officer of a savings bank all persons who have any

pecuniary interest, whether as owner of property subject to mortgage held by the bank or as borrower, guarantor, or partner of a debtor to a bank, which may influence in any degree the performance of official duty. Strict enforcement of this rule may occasionally exclude a good man from such a trust, but like results are incident to all general rules of public policy, and the number of improper men excluded will be much greater."

The number of joint-stock fire and fire and marine insurance companies organized under the laws of the State on January 1, 1879, was 49, against 95 in the previous year. Total unobjectionable assets, \$56,585,455.55, an increase of \$81,656.92 over the previous year; capital stock, \$25,057,020, a decrease of \$900,000; total liabilities, including capital, \$37,984,693.73, a decrease of \$1,363,965.20; net surplus beyond capital, \$18,616,387.99; total income for the year, \$21,097,468.04, a decrease of \$1,315,503.45. The fire loss was \$7,923,684.54, a decrease of \$1,724,004.67; the marine and inland loss, \$848,172.97, an increase of \$345,957.81; dividends to stockholders, \$3,019,243.73; all other items of expenditures, \$7,799,860.82; and the total amount of expenditures was \$19,590,962.06.

Charges were made by the New York Chamber of Commerce against the New York Central and Erie Railroads relative to unjust discriminations in freight expenses against New York City. A committee was appointed by the Legislature to investigate the charges, consisting of A. B. Hepburn, chairman, of St. Lawrence County, and eight other members of the Assembly. The position taken by the president or chief officer of each company was one of public interest. In a joint letter to the committee they substantially declare that the annual reports contain about all the information that can justly be demanded by the public. This position is based on the theory that the rights vested in a railway regarded as a private concern so far overshadow its character as a public corporation that the rights of the public in the latter virtually cease to exist. To the railway the State has granted a part of its sovereignty, to be exercised with due regard to the rights of the grantors—the people; and this endowment of sovereignty has passed beyond the control of the grantor. The committee was clothed by the Legislature with power to send for persons and papers, to investigate the abuses alleged to exist, and to report to the Legislature what legislation, if any, is necessary to protect and extend the commercial and industrial interests of the State. Their first session was held in New York City on June 12th.

The town-bond repudiation sentiment received a severe blow early in the year by the action of the courts. The town of Lyons, Wayne County, was bonded to aid in the construction of the proposed Corning and Sodus Bay Railroad, which was never built. The

town authorities refused to pay coupon interest, alleging that the bonds were invalid. A suit at law was instituted, and a decision adverse to the town reached in the United States Supreme Court in the last week of April; it held that the recital in the bonds was an estoppel, and that the *bona fide* holder was not bound to look further, and the obligator could not go behind it. The town of Thompson, Sullivan County, was one of the first to contest its bonds. These were issued in aid of the Port Jervis and Monticello Railroad Company. They were recognized as valid and the interest promptly met until 1872, when further payment was denied on the ground that the obligation was illegal. Two suits to compel the payment of interest due and refused were decided adversely to the town in the United States Circuit Court, and were appealed to the Supreme Court of the United States. On the other hand (and this precedent has led to many other contests), the Court of Appeals of the State, before which the matter was brought in other suits, decided that the controverted bonds were issued without power or authority, and ordered that they should be delivered up and canceled. The bonds were, however, transferred to New Jersey holders, in order that suit might be brought in the Federal Court. The Court overruled the Court of Appeals decision, and ordered a verdict of \$28,220.87 to be entered against the town. The result in these two cases was watched by a number of towns.

The State Convention of Nationals to nominate State officers assembled at Utica on August 29th. William Voorhees was elected chairman. The following nominations were made: For Governor, Harris Lewis; for Lieutenant-Governor, John Wieting; for Secretary of State, P. K. McCann; for Comptroller, John A. Shannon; for Treasurer, Julian Winnie; for Attorney-General, George H. Wright. The following resolutions were adopted:

1. That the national-bank currency shall be withdrawn, and that all money used by the people, whether gold, silver, or paper, shall be issued by the General Government, and be made a legal tender for all debts and dues, public and private. The volume of such money to be about \$50 per capita, or sufficient to meet all the requirements of trade.
2. That the established volume of currency shall be increased from time to time in direct ratio with the increase in business and population of the country, so as to maintain for a dollar, or as nearly as possible, uniform purchasing power.
3. That all new issues of paper money shall be used to cancel the interest-bearing debt of the nation, to promote needed public improvements, and to pay the current expenses.
4. That the surplus of money now in the Treasury of the nation shall be used to cancel the interest-bearing debt.
5. That the national Government shall issue no more interest-bearing obligations, and that the outstanding bonds shall be paid and canceled at once.
6. That postal savings banks shall be established.
7. The equal taxation of all property.
8. That the salaries paid to the public officers shall be reduced to the basis of a just compensation for

services rendered; and all unnecessary offices abolished.

9. That there shall be proper legislation for the purpose of collecting and preserving reliable statistics to form a basis of intelligent action on all labor questions, to the end that labor may be fully and constantly employed and justly compensated.

10. The establishment of just and equitable rates for railroad fare and transportation.

11. That the Legislature at the earliest moment possible shall pass a law giving to mortgagees of real estate a right of redemption after five years of the sale.

12. That reasonable land limitation laws shall be enacted to prevent land monopolies.

13. The abolition of the State Prison contract system.

14. That no political assessments of candidates for office or officeholders shall be permitted in this party.

15. A reduction of legal rates of interest.

16. That debt due for labor performed shall take the precedence of all other claims.

17. That no more public lands shall be voted to corporations, but that they be held for actual settlers.

18. That we favor a tariff which shall protect American industry and manufactures.

19. That the Government should faithfully perform its pledge made to the Union soldiers at the time of enlistment, to wit: That they receive 160 acres of land on being discharged. Fee simple and equitable payment per month of each soldier according to the value of full legal-tender dollar.

The Republican State Convention for the nomination of State officers was held at Saratoga on September 3d. William A. Wheeler was chosen President, and the following State officers were nominated: For Governor, A. B. Cornell; for Lieutenant-Governor, George G. Hoskins; for Comptroller, James W. Wadsworth; for Secretary of State, Joseph B. Carr; for State Treasurer, Nathan D. Wendell; for Attorney-General, Hamilton Ward; for State Engineer, Howard Soule. The following platform was adopted:

The Republicans of New York, pledging ourselves anew to national supremacy, equal rights, free elections, and honest money, declare these principles:

1. The Republic of the United States is a nation and not a league. The nation is supreme within its own constitutional sphere. It is endowed with power to guard its own life, to protect its own citizens, to regulate its own elections, and to execute its own laws. The opposite doctrine of State sovereignty is the baleful mother of nullification, secession, and anarchy. Republicanism stands for national supremacy in national affairs and State rights in State concerns. Democracy stands for State sovereignty, with its own twin heresy that the Union is a mere confederacy of States.

2. To refuse necessary supplies for the Government with the design of compelling the unwilling consent of a coordinate and independent branch to odious measures is revolution. To refuse appropriations for the execution of existing and binding laws is nullification. We arraign the Democratic Representatives in Congress as guilty both of revolutionary attempts and nullifying schemes, and we reprobate their action as calculated to subvert the Constitution and to strike at the existence of the Government itself.

3. The safety of the republic demands free and pure elections. The Democratic Congress has attempted dictation by caucuses, by threats of starving the Government, and by months of disturbing agitation, to break down the national election laws. We denounce this effort as a conspiracy to overthrow the safeguards of free suffrage and to open the ballot-box to the unchecked domination of the rifle clubs of the South and the repeaters of New York. We declare our uncompromising opposition to any repeal of these just pro-

tection laws, and the Republican Senators and Representatives in Congress, for their resistance to this attempt, and President Hayes for his veto messages, deserve and receive our hearty approval.

4. The Republican party neither justifies nor tolerates military interference with elections. It seeks only to protect the ballot-box from the interference of force and fraud. It repels the false charges and denounces the false pretenses of conspirators, who, while professing free elections everywhere, sustain mob law in the South; while inveighing against troops at the polls to protect citizens, refuse to prohibit armed clubs from surrounding the ballot-box to intimidate them; and, while affecting that the soldier's bayonet will overawe free electors, remain silent when the assassin's bullet seals the fate of political independence.

5. We call upon the people to remember that the Democratic party forced the extra session of Congress without warrant or excuse; that it prosecuted its partisan purposes by revolutionary methods; that it persistently obstructed resumption and still constantly presses disturbing measures; that it reopens sectional questions closed by the national triumph, and threatens to repeal the war legislation; that its Southern element answers conciliation only with violence; that its hope of success rests alone on a solid South, and that its triumph would make the South the ruling force of the nation. We recognize that the great body of the people who defended the Union, of whatever party name, are equally patriotic and equally interested in good government; and we earnestly invoke them to unite in resisting the dangerous designs of a party organization under the sway of those who were lately in rebellion, and seek to regain in the halls of legislation what they lost on the field of battle.

6. The successful resumption of specie payments, despite Democratic prediction and hostility, is the crowning element of the Republican financial policy. Followed by returning national prosperity, improved credit, a refunded debt, and reduced interest, it adds another to the triumphs which prove that the Republican party is equal to the highest demands. Our whole currency should be kept at par with the monetary standard of the commercial world, and any attempt to debase the standard, to depreciate the paper, or deteriorate the coin, should be firmly resisted.

7. The claims of the living and the memories of the dead defenders of the nation conjure us to protest against the partisan and unpatriotic greed which expels old Union soldiers from their well-deserved rewards and advances Confederate soldiers to their places.

8. As the pledge and proof of its economy in State administration, the Republican party, in spite of prolonged Democratic resistance, proposed and passed the constitutional amendments which restrict the expenses of the canals to their receipts, and reform the whole system of canal and prison management, and, by extinguishing the public indebtedness and relieving the people from any further tax, effected a great saving in State taxation. These fruits of Republican measures the Democrats have brazenly attempted to appropriate as their own. Appealing to the records in support of our declaration, we pronounce their claims unfounded, and hold up their authors as public impostors.

9. The inequalities of taxation, which press most upon those least able to bear them, should be remedied. To this end the Republican Legislature created a commission to revise the assessment and tax laws and to reach a class of property which now largely escapes; and we remind the people that this salutary reform was unwarrantably defeated by the present Democratic Executive.

10. Moneyed and transportation corporations are not alone the works of private enterprise, but are created for public use and with due regard to vested rights. It is the clear province and the plain duty of the State to supervise and regulate such corporations so as to secure the just and impartial treatment of all interested; to foster the industrial and agricultural welfare of the people, and with a liberal policy favor the public waterways and maintain the commercial supremacy of

the State. We look to the inquiry now in progress, under the direction of the Legislature, to develop the facts which will guide to all needed action.

The Democratic State Convention assembled at Syracuse on September 11th. J. C. Jacobs was chosen President, and the following platform was adopted:

The Democratic party of the State of New York in convention assembled, profoundly sensible of the important consequences depending upon the immediate result of their deliberations, do declare and reassert the principles of popular liberty and rights laid down by Washington, Jefferson, and other founders of the republic. We hold to the Constitution with all its amendments, sacredly maintained and enforced, and to the rights of the States under the Constitution. The tendencies of the Republican party to centralization and consolidation are contrary to the principles of our institutions. The United States form a nation in the sense, to the extent, and for the purposes defined in the Federal Constitution, and we resist every attempt to transform it into an empire. We insist on unity, fraternity, and concord, and that the issues settled by the war shall not be revived. We deprecate the efforts of the Republican managers to revive sectional feuds and to rekindle the passions of the past. We demand honest elections, and an honest count of votes. Never again, by fraud or force, shall the popular will be set aside to gratify unscrupulous partisans. The Democracy oppose all favoritism. No single interest or class of persons should be protected at the expense of others. Democracy means the government of the whole people for the whole people and by the whole people; but if any class is to receive special consideration, it should be the working people, whom all other governments oppose and crush. The rights of the people should be scrupulously protected from the encroachments of capital and the despotic greed of corporations. The Democracy believe now, as they have always believed, in gold and silver as the constitutional money of the country. We condemn the speculative methods of the present Secretary of the Treasury, the questionable favoritism he has shown to particular monetary institutions or so-called "syndicates," and the extravagance he has permitted in his department in connection with his refunding schemes. We look with shame and sorrow on the disgraceful repudiation of all their professions of civil-service reform by the Executive and his supporters. Federal offices have been freely given for despicable partisan services; leading officers of the Government are making partisan speeches, managing political campaigns, and requiring their subordinates to contribute to campaign funds, in derogation of every principle and promise of an honest civil service. The 104,000 Federal officers constitute an army, moving under a single direction, to keep the Republican party in power, and this vast patronage is now used as a corruption fund against the people. We congratulate the people of New York on the results of Democratic administration in the payment of the State debt, the reduction of expenses, and the diminished burden of taxation. We condemn the efforts of demagogues to create jealousy and antagonism between the city of New York and the rest of the State, when their interests are identical and the growth of the one is the prosperity of the other. The Democratic officers of the State of New York, by the ability and fidelity with which they have discharged their duty during the past three years, by their conscientious application of constitutional tests to the acts of every department of the State government, by their successful resistance to private and partial legislation, and by their economical conduct of the finances and reduction of expenses of the State government, have entitled themselves to the gratitude of their fellow citizens of all parties. The people of New York—farmers, manufacturers, and merchants alike—demand that they shall have all the advantages which accrue to them from their favorable position, and that the railroads they have

chartered and endowed with vast and profitable privileges shall be operated for their benefit and not for their ruin. We therefore endorse as our expression of the foregoing principles the following:

1. Honesty, efficiency, and economy in every department of the government.
2. All property should bear its just proportion of taxation, and we pledge the Democratic party to reform the laws of assessments to that end.
3. Lessening the burdens and increasing the advantages of the working people.
4. The equal protection of the rights of labor and capital under just laws.
5. The railroads prohibited by law from unjust discrimination and from favoring localities or individuals.
6. The tolls upon the canals to be kept at the lowest rates possible, consistent with economical and efficient management.
7. The maintenance of the public schools, the pride and hope of a free State.
8. Prisons for the punishment and reformation of criminals, and not for the injury of honest labor, which should be protected as far as possible from such competition.
9. Municipal self-government in local affairs.
10. That the successful efforts of our Democratic Representatives in Congress, in restoring a fair and intelligent jury system and in protecting the freedom of the ballot, and preventing the unconstitutional interference of the Federal Administration with the State elections, are approved; and the action of the Executive in vetoing the legislation designed to prevent the presence of armed soldiers and the employment of paid Federal supervisors and marshals at the polls, and the use of the public funds for this purpose, is denounced by the Democracy of the State of New York. And as the foundation of all liberty and prosperity, privileges and rights under our government, we shall continue to uphold a system of untrammelled suffrage, absolutely free from Federal force or supervision.
11. It is the duty of the State, alike in the interest of taxation, temperance, and equal and exact justice to the community, to make such revision of the excise laws as will better secure the rights of the citizens to life, liberty, property, and public order.

After the adoption of the platform, nominations for Governor were called for and made. The call of the roll was then commenced, but had not proceeded far when Mr. Augustus Schell of New York rose and said:

MR. CHAIRMAN: The delegation to which I have the honor to belong represents a large portion of the Democratic party. It is one which in past times has been ever ready, ever willing to support all the regular nominations of the Democratic party. I myself, for years, and many gentlemen who are with me, for years and years past, ever have been ready in storm and in sunshine to sustain and support that great party. We find ourselves now in a position which has been communicated to the people of this State, which has been communicated to its representatives on the floor of this Convention, that under no circumstances will the Democracy of the city of New York support the nomination of Lucius Robinson. (Great applause, groans, and hisses.) They, however, in making this announcement, desired to convey to our friends and Democrats in New York, that we were ready and willing to support any other name that they might place at the head of the ticket; but our suggestion has been unheeded, and from appearances in this Convention it has been determined that Lucius Robinson shall be nominated as Governor. I desire to further state, in behalf of my friends from New York, and in behalf of the great and noble constituency whose representatives are now present, that the rest of the ticket which shall be nominated by this Convention will receive its warm and hearty support. I desire now to announce to this Convention that the delegation from New York will retire from the hall.

The New York City delegation then left their seats and retired from the hall amid much excitement. The call of the roll of members was then concluded, with the following result: Lucius Robinson, 243; Henry W. Slocum, 56; Clarkson N. Potter, 1; Horatio Seymour, 1. Governor Robinson was thus renominated. The other nominations were: For Lieutenant-Governor, Clarkson N. Potter; for Secretary of State, Allen C. Beach; for Comptroller, Frederick P. Olcott; for State Treasurer, James Mackin; for Attorney-General, A. Schoonmaker, Jr.; for State Engineer, Horatio Seymour, Jr.

Mr. Reeves of Suffolk County moved the following resolution, which was adopted:

Resolved, That the Democratic organizations of the city and county of New York are hereby requested and authorized by this Convention to organize the Democratic voters of that city in support of the nominees of the Democratic party of the State of New York.

Mr. Tabor of Queens County offered the following, which was adopted:

Whereas, The delegates of the organization in the Democratic party in the city and county of New York, known as the Tammany Hall organization, after having been admitted to seats in this Convention, and having participated on terms of exact equality with the representatives of all other county and district organizations in the proceedings of this Convention until the time had arrived for making the nominations to the various offices to be voted for at the next general election in this State; and,

Whereas, The delegates representing such organization did, before any nomination was made and without just cause or provocation, and on the mere pretext and suspicion that the Convention was about to proceed to the nomination of a candidate for the office of Governor; and,

Whereas, Such delegates did declare that they would oppose and defeat, if it lay in their power so to do, the nominee of this Convention for the office of Governor, in the event that the choice should result in the renomination of the present able and efficient Governor, thereby bidding defiance to the will of the State organization and its representatives in convention assembled; and,

Whereas, Such voluntary withdrawal and setting at defiance the will of the Democratic party, as represented by its delegates in convention assembled, is deemed to sever all connection between said organization and the regular State organization of the Democratic party in this State: therefore, be it

Resolved, That the Democratic party of this State will not hereafter acknowledge or grant to such organization any prestige or preference over any other Democratic organization in said city and county of New York, but will hear and decide upon the merits of all claims to representation in future State Conventions as the same may arise and be presented by those claiming admission from the respective Assembly districts in said county.

Those who had retired from the Convention assembled elsewhere in the evening, and organized by the appointment of D. D. Field as President. A committee was appointed to report a plan of proceedings, who through Lieutenant-Governor Dorsheimer reported the following:

1. That the Convention now proceed to nominate a candidate for Governor.
2. That a committee of fifteen be appointed by the Chair and announced in the future, which shall be

constituted with power, with reference to the remainder of the ticket, as may seem to them proper.

He then said that in nominating a candidate to be supported for Governor it became proper that he should speak of his qualifications for the office. He nominated John Kelly of New York, and went on to eulogize him as a public official. He closed by proposing that John Kelly be nominated by acclamation. The Chair put the question, and Mr. Kelly was nominated by acclamation. He then made a speech accepting the nomination.

The election was held on November 4th, and resulted as follows:

FOR GOVERNOR.	
Alonzo B. Cornell, Republican.....	418,567
Lucius Robinson, Democrat.....	313,790
John Kelly, Independent Democrat.....	77,566
Harris Lewis, National.....	20,286
John W. Mears, Prohibition.....	4,487

FOR LIEUTENANT-GOVERNOR.	
George G. Hoskins, Republican.....	425,804
Clarkson N. Potter, Democrat.....	425,014
John M. Wieting, National and Workingman.....	23,067
James H. Bronson, Prohibition.....	8,902

FOR SECRETARY OF STATE.	
Joseph B. Carr, Republican.....	426,013
Allen C. Beach, Democrat.....	434,188
Peter K. McCann, National and Workingman.....	22,558
Alphonso A. Hopkins, Prohibition.....	4,226

FOR COMPTROLLER.	
James W. Wadsworth, Republican.....	423,253
Frederick P. Olcott, Democrat.....	422,825
John A. Shannon, National and Workingman.....	22,572
Caleb W. Allis, Prohibition.....	4,192

FOR TREASURER.	
Nathan D. Wendell, Republican.....	426,800
James Mackin, Democrat.....	423,435
Jullan Winnie, National and Workingman.....	21,646
Stephen Merritt, Prohibition.....	4,149

FOR ATTORNEY-GENERAL.	
Hamilton Ward, Republican.....	427,382
Augustus Schoonmaker, Democrat.....	423,283
James Wright, National and Workingman.....	21,961
Walter Farrington, Prohibition.....	4,073

FOR STATE ENGINEER AND SURVEYOR.	
Howard Soule, Republican.....	427,240
Horatio Seymour, Jr., Democrat.....	429,681
Garrett Nagle, National and Workingman.....	22,779
John J. Hooker, Prohibition.....	4,043

The vote on the proposed amendment to section 6, Article VI., of the Constitution, to authorize an additional Judge of the Second Judicial District, was as follows: For the amendment, 95,331; against the amendment, 25,578. The Legislature was divided as follows:

PARTIES.	Senate.		House.
	For.	Against.	
Republicans.....	25	92	
Democrats.....	8	85	
National.....	..	1	
Total.....	33	123	

NIHILISTS. This is the term commonly used to designate the active members of the revolutionary party in Russia. It is often applied to any persons who are implicated in the social and political disturbances with which the empire is afflicted, and is even sometimes made to embrace all who participate in the agitation

for a change in the system of government of the country; but in its proper sense it belongs only to those who are supposed to be acting under the direction of a secret revolutionary committee, of which nothing is known beyond what it directs or permits to be published of itself. The names Nihilists and Nihilism did not originate with the party, but were given to express contempt of the latter, because they sought the destruction of the existing order without proposing or seeming to contemplate the substitution of any defined scheme of organization in its place. So far as is known, they were first employed by the novelist Ivan Turgenieff in his stories of Russian society. Russia has been peculiarly exposed to conspiracies and insurrections. The despotic policy of the Government toward the people of annexed or non-Russian provinces has provoked frequent outbreaks. Among its own people, an autocratic administration permeating every department of public life has left no room for the legitimate discussion of political and social questions, in which the active minds of freer countries find healthful exercise; and such minds in Russia, for the want of a better field of activity, have busied themselves with inventing religious heresies and in secret plottings.

The first notable manifestation of the secret political societies was the insurrection of December, 1825, at the beginning of the reign of Nicholas I., which aimed at overthrowing the Czardom and establishing a constitutional form of government. Though the insurrection was suppressed, those engaged in it continued to disseminate their views, and their party quietly gathered strength. One of their leaders, Alexander Herzen, achieved considerable fame by the energy and boldness with which he spread his revolutionary writings in Russia. He died in 1870. (See "Annual Cyclopædia" for 1870, article HERTZEN.) The earliest advocate of the present doctrines of Nihilism was Michael Bakunin, a member of a rich family of high rank, and a near relative of men prominent at court and in the army. He was born in 1814, advocated a Russian republic in 1847, and in 1868 founded the "International Alliance of the European Revolution." He died at Geneva in 1876. (See "Annual Cyclopædia" for 1876, article BAKUNIN.) Societies were formed in Russia for the advocacy of the views taught by Herzen, as the Young Russia, Land and Freedom, etc., whose newspaper organs, the "Sovremennik" and the "Ruskoie Slowo," enjoyed considerable freedom of circulation under the relaxed press restrictions which prevailed from 1858 to 1872, but were finally suppressed.

In consequence of the general dissatisfaction which prevailed after the Crimean war, the new Emperor Alexander entered upon a more liberal policy of government than had prevailed. The abolition of serfdom was resolved upon as a measure that would improve the condition of the people and conciliate a

large mass of them, while it would not infringe upon the absolute sovereignty exercised by the Czar. Representative assemblies began to be talked of, and the nobility were authorized to choose committees to discuss the subject of emancipation. Demands were made in connection with the meeting of some of these committees for a general assembly, for chartered provincial assemblies, for the responsibility of officers to the law, and other features of constitutional and representative government. The Government refused to entertain any of these demands, but manifested its displeasure toward those committees. The deputies of the committees, when they went to the capital with their reports, were not permitted to meet for discussion, or to present objections or propose amendments to the plan which had been laid before them, but were confined to a list of printed questions which they were requested to answer in writing. Thus every attempt to obtain a representative body, or to secure liberty to discuss administrative questions, was put down. Persons of the higher and more intelligent classes who had become interested in such questions were driven to associate with those who sought to accomplish by revolutionary methods what they had found it impracticable to bring about by legal means. The Nihilist party is largely made up of persons of this class. To these are added those who are dissatisfied with the measures of the Government from the act of emancipation down to the war with Turkey, or are disgusted with the corruption which prevails; unruly students; and such uneasy spirits as are called socialists, communists, or red republicans in other countries. The existence of a revolutionary conspiracy was established in 1877, when, after a great trial lasting eighteen months, 135 persons out of 183 who had been arrested were found guilty of belonging to such an organization. The Nihilists began to attract attention as a really formidable organization soon after the trial of Vera Sassulitch in 1878 for shooting at General Trepoff, chief of the secret police. (See "Annual Cyclopædia" for 1878, article RUSSIA.) Her acquittal by a jury of presumed responsibility and conservatism, after she had avowed the offense, and in the face of the evidence and the law, seemed to excite them to activity. A season of uprisings, assassinations, and terror ensued, the disorders of which were only partially arrested after the Government had applied measures of extreme severity for several months. The assassination of General Mezentzoff, who succeeded General Trepoff, was avowed by the Nihilists as their work. Their journal, "Land and Liberty," published an account of the offenses for which he had been adjudged to deserve death, in which it said that he had trampled right under foot, tortured his prisoners, persecuted the innocent, and in his official capacity murdered by brutal ill-treatment, by hunger, thirst, and the rod, a number of persons whose names were

given. The assassination of Prince Krapotshkin, Governor of Kharkov, who was shot February 22, 1879, was explained in a Nihilist circular as having been on account of certain inhuman acts which he had committed against prisoners under his charge. "Death for death, execution for execution, terror for terror," said the circular; "this is our answer to the threats, the persecutions, and the oppressions of the Government. Should the latter persevere in its old course, the bodies of Heyking [commander of gendarmerie at Kiev, who was also killed by Nihilists] and Mezentzoff will not have turned into dust before the Government will hear from us again." General Drenteln, chief of the gendarmerie, was shot at, March 25th, and was warned that he could not escape. In reference to this act, "Land and Liberty" said: "It is not necessary to recapitulate Drenteln's crimes. He deserves death for this alone—that he has been chief of gendarmes during this period of repression." Leon Mirsky, the perpetrator of this act, when tried for it in November, acknowledged what he had done, and only pleaded that he had acted not as a common murderer, but for public reasons and under the orders of a committee which he was bound to obey. The number and character of the victims who were assassinated or attacked under the orders of this mysterious committee was so great in the several towns of the empire as to give a color of foundation to the opinion that a settled purpose existed to spread terror and deter any one from serving the Government in a capacity involving functions of police. The period of murders was followed by one of arson, when whole towns were burned with an enormous destruction of property, the excess of which beyond the average amount of destruction by ordinary incendiarianism was ascribed to the instigation of the Nihilists.

Nihilist societies began to be formed in 1859, among the students of the Agricultural College of Petrovski, near Moscow, who had adopted the materialistic views taught by Büchner in his "Force and Matter," and the socialistic views expounded by the German writer Max Stirner, in his "Property and the Individual." Both these books were prohibited by the Government, but that only caused them to be more in demand, and a lithographed translation of the "Force and Matter" was passed around from hand to hand. Other works of similar tendency were read by these students, among them Buckle's "History of Civilization." The first political murder took place at this institution, when one of the students was killed by Netchayeff. The Government, alarmed by this event, treated the students with severity, keeping many of them in prison for years without trial. Among the persons who suffered was Vera Sassulitch, who was a friend of Netchayeff's sister. These persecutions caused the Nihilists to gain many adherents among the people and among literary men. One of the latter class who joined them was Tcherny-

tchevsky, whose novel, "What is to be Done?" is regarded as a kind of text-book of Nihilism. After the Franco-German war the Nihilists adopted the Panslavist cause, but the acquittal of Vera Sassulitch again directed their attention to home affairs. In their later operations they have been drawn further away from Panslavism, the influence of which is rather on the side of imperial ambition, and they now represent the reverse tendency in its extreme.

The fact has been brought to light in the course of the trials of Nihilists that a very large proportion of the party is composed of graduates, students, and persons who have not been able to complete their studies. This circumstance is accounted for as the effect of changes which have been made by the Government in the regulation of university studies. These regulations were greatly relaxed, and the facilities for entering the universities were enlarged at one time, so that the halls of the schools were crowded with students of moderate means. Afterward the standards of examination were made more rigorous, so that the students who had been drawn to the colleges, finding they would not be able to enter the civil service, suddenly dropped their studies, and, being without position or prospects, yielded to the persuasions of political agitators.

The doctrines and objects of the Nihilists must be gathered from the expressions of their leaders and their own declarations of purpose. Michael Bakunin, who is regarded as the founder of the doctrines of the party, in a speech at Geneva in 1868, announced himself the bearer of a new gospel, the mission of which was to destroy *the Lie*, the beginning of which was God. Having got rid of this belief, the next lie to be destroyed was *Right*, a fiction invented by *Might* in order to insure and strengthen her reign. Might formed the sole groundwork of society, made and unmade laws; therefore, our first work, he said, "must be destruction and annihilation of everything as it now exists," the good with the bad; "for if but an atom of this old world remains, the new will never be created." He detested communism, advocated the abolition of marriage and inheritance, and taught that conscience was a mere matter of education. Another Nihilist, in a speech, sought to justify the deeds of political assassins and incendiaries, on the ground of the necessity of rooting out from men's minds the habitual respect for the powers that be. In March, 1876, several Nihilist proclamations were seized in Prussia while on their way to Russia, in one of which were these instructions: "You should only allow yourself to be influenced in the selection of your victims by the relative use which the Revolution would derive from the death of any particular person. In the foremost rank of such cases stand those people who are most dangerous and injurious to our organization, and whose sudden and violent death would have the effect of terrifying the Government and shaking its

power by robbing it of energetic and intelligent servants. The only revolution which can remedy the ills of the people is that which will tear up every notion of government by its very roots, and which will upset all ranks of the Russian Empire with all their traditions. Having this object in view, the Revolutionary Committee does not propose subjecting the people to any directing organization. The future order of things will doubtless originate with the people themselves; but we must leave that to future generations. Our mission is only one of universal, relentless, and terror-striking destruction. The object of our organization and of our conspiracy is to concentrate all the forces of this world into an invincible and all-destroying power." It is believed that the number of persons who hold to these principles and act upon them is in reality comparatively small, and that they owe their power to the neutral attitude of the Russians of the middle and upper classes, who, while they will not help them, refuse at the same time to lend any support to the present system of government.

The Nihilists seem to act under the direction of a secret executive, whose authority is exercised in the most positive and direct manner, and whose orders are implicitly obeyed by the individual members of the party. Their government is also said to be divided into sections, each of which acts independently of the others, and the members of which and the place of meeting are changed often, so as to avoid discovery and preserve an effective organization of all the members in case one of the boards should be captured. Each section has the right of pronouncing sentence of death upon dangerous or suspected persons, and is instructed to enter into as close relations as possible with members of high society. For this purpose, a plan has been adopted of placing women belonging to the conspiracy, whenever it can be done, as governesses in the families of high functionaries; and under their machinations and influence numerous women of position have been imbued with Nihilistic doctrines and drawn into connection with plots, so that the heads of their families have been embarrassed and rendered unable to act against the movement. The Nihilists have carried on their operations with great boldness, and have kept themselves prominent before the public everywhere in the empire; yet they have preserved their secrecy with marvelous success. The whole country has been flooded with their proclamations and handbills; their warnings and notices have been posted on the walls of public places in defiance of the vigilance of the police, and posted up again just after they were taken down, and have been deposited in the public offices; yet the agents by whom these things were done could seldom be detected. Some wildly exaggerated stories and many that had no foundation have been circulated on this subject. Newspapers are published in the interests of the Nihilists in Lon-

don and Geneva, and in Russia. They are said to be sustained mainly from the proceeds of a bequest producing 60,000 rubles a year, which a friend of the cause left for that purpose. The principal journal is the "Zerulia i Svaboda" ("Land and Liberty"), which is published at St. Petersburg once or twice a month, and is said to have regular subscribers, although the police have not been able to find its office. It is an official organ of the Executive Committee, and is the chief medium through which the principles of the organization are promulgated, its warnings given out, and the reasons for its acts explained after they have been committed.

The purposes of a part of the Nihilists have gradually acquired shape, and they are understood to embrace now the establishment of a constitutional representative government, with all the forms of political life as they are enjoyed in other countries, and such as Russia has herself caused to be given to Bulgaria. In 1878 publications appeared in all the cities of the empire denouncing the highest officers for malfeasance, and demanding a constitution, the suppression of the Emperor's private chancellery or secret police, the abolition of corporal punishment in prisons, and reforms in the procedure and administration of justice. The removal of about two hundred officers was demanded by name; and the proclamations continued: "Since we are unable to obtain any redress in a legal way, and that because in Russia not the Czar, but those about the Czar, really govern the country, we shall, unless attention is paid to our wishes, enter upon the illegal way, and we shall shoot, stab, and murder until our demands are satisfied and the Camarilla is swept from the face of the earth." At first they declared that they did not intend any injury to the Czar, and no threat was made against him till a short time before the attempt upon his life by Solovieff in April, 1879, when a proclamation was posted in St. Petersburg telling "Alexander Nicolaievitch" that the warnings and sentences which "the invisible delegates of the murderously oppressed Russian people have sent to the various dignitaries of the present despotic government in Russia belong, as a rule, to the preparative work," and that for that reason neither the Czar nor any member of his family had as yet been threatened, but cautioning him "against upholding the tyranny which the revolutionaries are combating," and warning him that he was "getting into dangerously deep waters." The newspaper "Land and Liberty" declared that Solovieff had no connection with the Executive Committee, but belonged to a distinct band of revolutionists; but it threatened death to any persons who should be concerned in torturing him, if, to obtain information, that process should be resorted to. It also reviewed the condition of affairs which had produced the present situation, and alienated from the Czar the sympathy and affection of his people. Seat

ing himself on the blood-stained throne of his late father, it said, the Emperor Alexander II. had pledged himself to beneficial reforms, and raised great expectations; but the only result had been bitter disappointment. There was not a section of the Russian world which did not revolt at the prevailing system of administrative corruption and grinding tyranny. The peasantry suffered more than ever, were distressed for arrears of taxes, had been robbed of the lands which they had cultivated for themselves as serfs, were plundered by those who had the management of affairs, were reduced to absolute wretchedness, suffered from chronic famine, were drafted in larger numbers into the army, and now found consolation only in drink. In place of free institutions, which Russian society had been led to expect at the beginning of the present reign, there was nothing but administrative tyranny and outrageous injustice. All individual rights and the rights of humanity were denied or trampled down with pitiless cruelty. The courts of justice were a mockery, while the press subserved an odious system of government. Education was reduced to an absurdity; the elementary schools had been diminished in number, and learning had become almost impossible, while Russia had been drained of all her money and resources, her population had declined, thousands of men had been put into bonds, and generals conspicuously incapable, from the Commander-in-Chief downward, had led the Russian army to the shambles.

A few weeks later the Revolutionary Committee issued a new address to the Russian people. It began with the assertion that the object of the party was to effect a radical change in the social and political conditions of Russia, and to awaken in the nation a consciousness of its rights. To attain this end, it continued, the people must be instructed as to the "criminal intentions" of the ruling classes. When Russians recognize the true cause of their melancholy position, they will soon find the means of fighting for their liberation; they will also learn that their business is not to "drive the Turks from Europe and to uphold the Slavs because they are of the same race and faith," but to improve their own circumstances, and to cease "placing their blood and possessions at the service of a clique which thinks of nothing but its personal advantage." "We have lost many brothers," it concluded; "over their beloved graves let us clasp hands in fraternal union, and let us appeal to the people when the destined hour shall have struck." A pamphlet containing Nihilist poetry was published about the same time, and a posthumous poem by the Nihilist Nekrassoff was announced.

By the aid of minute and severe police regulations instituted in all the large towns, the Government succeeded in suppressing seditious publications for several months, and there seemed to be an intermission in the attacks

upon public officers. Almost the only signs that the conspiracy continued to live were observed in the conflagrations, and even these were less numerous than they had been. The revolutionists, however, still nursed their plans, but prosecuted them in such a manner as should not for the time afford any clew to their movements. The first number of a new revolutionary paper, entitled "The Will of the People," appeared in the latter part of October. It was very violent in its tone. The attempt at Moscow on the 2d of December to blow up the train on which the Czar was traveling was followed by the appearance of a manifesto from the Revolutionary Committee, in which attention was directed to Alexander II. as the personification of a despicable despotism.

NORTH CAROLINA. The Legislature of North Carolina commenced its biennial session at Raleigh on January 8th. In the Senate Lieutenant-Governor Jarvis presided; and in the House John M. Moring was chosen Speaker by 68 votes to 27 for R. M. Norment. The Speaker is a native of Chatham County, and represented it in the Legislature at three previous sessions.

Among the measures of the session was an act to abolish private seals and to prescribe a short form of deed for the conveyance of real estate, which is important, as follows:

Whereas, The necessity for the use of the word "heirs" to carry a fee-simple estate is a relic of feudalism and an unnecessary technicality; and,

Whereas, The reason for using private seals has long since ceased, and the present forms of deeds is [are] complex and lengthy, thereby unduly increasing the cost of registration; therefore,

The General Assembly of North Carolina do enact:

SECTION 1. That all instruments hitherto requiring a private seal shall be as good and available in law for all purposes as if sealed. And all instruments not requiring an official seal shall be as valid to all intents and purposes in law as if the same had been sealed.

SEC. 2. That in every conveyance of real property, a fee simple shall be presumed to be transferred, unless the instrument shall expressly confer in terms a less estate.

SEC. 3. That the following form shall be sufficient as a deed for real property within the meaning of this act.

Received (of the buyer) — \$ —, in full for (describe the property).

(Dated.)

(Signed by seller.)

SEC. 4. That such deed shall, without express words, import a general warranty, but any other covenants may be inscribed by the parties, or it may operate as a quitclaim if it shall be so expressed.

SEC. 5. That the fee of the clerk for acknowledgment and probate of deeds, including the privy examination of wife (if any), shall be ten cents; and the fee of the Register of Deeds shall be for registering the same, twenty cents.

By another act it was provided that when real estate shall be conveyed to any person, the same shall be held and construed to be a conveyance in fee, whether the word "heirs" shall be used or not, unless such conveyance shall, in plain and express words, show, or it shall be plainly intended by the conveyance, or some part thereof, that the grantor meant to convey an estate of less dignity.

A tramp is defined to be any person going about from place to place begging and asking or subsisting on charity, and such shall be punished by imprisonment in the county prison not more than six months; but any person who shall furnish satisfactory evidence of good character shall be discharged without cost. Any act of begging or vagrancy by any person, unless such are well-known objects of charity, shall be evidence that the person committing the same is a tramp within the meaning of the act. The blind and minors under fourteen years are exempted from the provisions of the law.

The act to raise revenue reduced the poll-tax from 89 to 72 cents. The tax on real and personal property, moneys, credits, investments in bonds, stocks, joint-stock companies, or otherwise, was reduced from 29½ to 24 cents, to be applied as follows: 12 instead of 14½ cents to the Insane and Deaf and Dumb and Blind Asylums; 6 cents as heretofore to the Penitentiary. The tax on billiard-saloons is \$20 on each table, but hereafter every place where liquor is sold is considered a billiard-saloon. Retail liquor-dealers are to pay a monthly license-tax of \$5 instead of \$8 as before; and retailers of malt liquors only \$3, instead of \$1.50, as before. "Any grocer, druggist, dealer, or other person who shall sell spiritous or malt liquors, wines, or cordials, in any quantity, if the same or any portion thereof shall at any time be drunk upon the premises where such liquors, wines, or cordials are sold, shall be considered to be a retail dealer within the meaning of the act." Every person or company running sleeping-cars upon any railroad in the State is to pay \$50 yearly for every car so run, and shall make returns and pay to the State Treasurer. Penalty for non-compliance, \$2,000. Tobacco-warehousemen, instead of a license-tax of \$50, are to pay \$15 and 1 per cent. on gross amount of their commissions on all sales of tobacco in excess of 300,000 pounds. Any merchant, dealer, or agent selling sewing-machines shall pay a tax of \$10 in each county, but the payment of a license-tax of \$200 to the State Treasurer will enable any person, company, or manufacturer of sewing-machines to peddle them in any county, employing any number of agents, free of county or municipal tax. A peddlers' license-tax of \$10 is hereafter good for a year instead of six months. Itinerant lightning-rod men are to pay \$50 instead of \$10 for each county. Drummers are to pay \$100 annually instead of \$50. The liquor-dealers' drummers are to pay \$200. Marriage licenses are reduced from \$1 to 50 cents.

Children of colored parents born at any time before the first day of January, 1868, of persons living together as man and wife, are legitimate children of such parents or either one of them, with all the rights of heirs at law and next of kin, with respect to the estate or estates of any such parents, or either one of them.

Another act provides that the clerk of a

court of record in any other State may act as a commissioner of affidavits and deeds, exercising the same powers as heretofore granted to regularly appointed commissioners for the State.

The debt of the State, as reported to the Legislature by the State Treasurer, was as follows:

1. Bonds issued before the war, known as "old" bonds.....	\$8,871,400 00
Interest due on same.....	5,007,580 50
Total.....	\$13,878,980 50
2. Bonds issued since the war by authority of acts before the war.....	\$1,774,000 00
Interest due on same.....	1,015,590 00
Total.....	\$2,789,590 00
3. Bonds issued since the war, by authority of ordinances of Convention, and acts of the General Assembly, passed since the war.....	\$2,012,045 00
Interest due on same.....	1,160,778 85
Total.....	\$3,172,818 85
4. Bonds issued under funding acts of March 10, 1866, and August 20, 1868:	
Funding act of 1868.....	\$2,281,000
Interest due on same.....	1,310,262
Funding act of 1862.....	\$1,657,600
Interest due on same.....	990,987
Total.....	\$6,189,549 00
5. Bonds issued during the war, by authority of acts passed before the war, for internal improvement purposes, to which are added \$215,000 issued for Chatham Railroad under ordinance of Convention of January 30, 1862.....	914,000 00
Interest due on same.....	674,090 00
Total.....	\$1,588,090 00
Total principal of debt, exclusive of special tax bonds.....	\$16,960,045 00
Total amount of interest due.....	10,160,182 85
Total amount of principal and interest.....	\$27,120,227 85

The principal of the "old" or ante-war debt, as shown in the foregoing classification, is \$8,371,400. Of this amount, \$2,794,000 were issued for the construction of the North Carolina Railroad. Deducting this amount, there remains as principal \$5,577,400. The interest on this class, which is reported at \$5,007,580.50, is subject to a deduction of the amount paid by the receiver of the dividends from the North Carolina Railroad Company.

On March 4th the Legislature passed an act "to compromise, commute, and settle the State debt." On the bonds issued before the war (except for the North Carolina Railroad) it proposed to pay 40 per cent. of the principal. The principal of this old debt, less the North Carolina Railroad bonds (\$2,794,000), is \$5,577,400. These bonds were given for:

Fayette and Western Plankroad.....	\$50,500
Gaston and Weldon Railroad.....	25,000
Fayette and Center Plankroad.....	45,000
Fayette and Warsaw Plankroad.....	10,000
Tar River.....	15,000
Insane Asylum.....	70,000
A. and N. C. Railroad.....	1,851,500
A. and C. Canal.....	824,000
Western Railroad.....	856,000
Western N. C. Railroad.....	1,186,000
W. C. and R. Railroad.....	1,012,000
"Certain purposes".....	1,009,400
C., F. and D. E. Navigation Company.....	148,000
Total.....	\$5,577,400
Amount payable at 40 per cent.....	2,230,960

Some bonds are made redeemable at 25 per cent., as follows:

Western N. C. Railroad.....	\$1,907,000
W. C. and R. Railroad.....	887,000
Western Railroad.....	184,000
Literary Board certificates.....	888,045

Total.....	\$3,261,045
Amount payable at 25 per cent.....	\$815,261.25

Bonds on which it is proposed to pay 15 per cent. of the principal are:

Funding State debt.....	\$2,331,000
" " Interest.....	1,657,600
Total.....	\$3,988,600
Amount payable at 15 per cent.....	593,290
Total proposed payment.....	\$3,644,511.25

The settlement is to be made by giving in exchange for outstanding bonds, as above, new thirty-year coupon bonds, dated July 1, 1880, bearing 4 per cent. interest, payable at the Treasurer's office on the first day of January and July of each year thereafter. The new bonds are to be of \$50, \$100, and \$1,000 each, are exempt from all State, county, or corporate taxation, and the coupons are to be received for all State taxes. To the payment of interest on them are to be applied all State taxes collected from professions, trades, incomes, merchants, dealers in cigars, and three fourths of all taxes collected from wholesale and retail dealers in spirituous, vinous, and malt liquors. If these taxes are in excess of interest to be paid, the surplus is to be invested in the purchase of the new bonds; if insufficient, the Treasurer is authorized to use any funds he may have, not otherwise appropriated; if still short, forty-year \$500 bonds may be issued to the amount of \$300,000. It is made "lawful for any executor, administrator, guardian, trustee, director of any corporation, and any and all other persons acting in a fiduciary capacity, holding bonds of the State, to make the exchange provided for in the act, and they shall be absolved from all liability on account of said exchange." The Treasurer is authorized to expend \$5,000 for bonds, etc., and to advertise the law in such papers as he may select.

The bonds not provided for in this law are:

N. C. Railroad construction.....	\$2,794,000
Chatham Railroad.....	1,030,000
Williamston and Tarboro Railroad.....	150,000
Penitentiary.....	44,000
Chatham Railroad.....	215,000
Western N. C. Railroad, special tax.....	7,960,000
W. C. and R. Railroad, special tax.....	8,000,000
Williamston and Tarboro Railroad, special tax.....	800,000
A. T. and O. Railroad, special tax.....	108,000
Total.....	\$13,599,000

Of this amount the North Carolina Railroad bonds, secured by mortgage of the State stock, are provided for in the following act, as is the item of \$150,000 for the Williamston and Tarboro road, leaving \$12,655,000 of debt that the State does not acknowledge as debt. In the debt provided for by the act is an item of \$324,000 for bonds issued for the Albemarle and Chesapeake Canal, which is also provided for by separate act authorizing their redemption by exchange for the State's stock in the canal.

This act of the Legislature was so acceptable to the bondholders that by August 1st about \$4,000,000 of the old debt had been retired, and was represented by only \$1,120,000 in the new bonds.

On March 14th the Legislature passed another act "to adjust and renew a portion of the State debt"; that is, to provide for the redemption of the North Carolina Railroad construction bonds, secured by a lien on the State's stock of \$3,000,000 in that road. These bonds amount to \$2,794,000, of which \$496,000 is due on January 1, 1883; \$481,000 on July 1, 1883; \$455,000 on January 1, 1884; \$118,000 on July 1, 1884; \$305,000 on January 1, 1885; and \$939,000 on April 1st of the same year. Unpaid interest, accrued before the North Carolina Railroad fell into the hands of the courts, amounts to some \$600,000 more. Under this act, the Governor of the State is authorized to appoint three commissioners, who are to negotiate with the bondholders terms of renewal with new bonds, subject to approval by the Governor and Treasurer. They are to give well-secured \$50,000 bonds, and are to receive from the bondholders for their services one half of one per cent. commission on all the bonds redeemed. For the redemption of the outstanding bonds, new \$50, \$100, \$500, \$1,000 forty-year coupon bonds, bearing not greater than six per cent. interest, are to be issued. The new may be exchanged for the old, or may be sold at not less than par and proceeds invested in old bonds at rates not greater than are allowed in the exchange. The new bonds are to be exempt from any and all taxation, and are to be secured as the old by the lien on the State's stock in the North Carolina Railroad, the dividends on which are to be applied to the payment of the coupons, which are also receivable in payment of all taxes, debts, dues, licenses, fines, and demands due the State of every kind whatsoever. All persons acting in a fiduciary character, holding any of the construction bonds, are authorized to exchange them for the new, and all such persons are also authorized to invest funds in the purchase of the new. The commissioners are to hold all the bonds and coupons delivered to or purchased by them "in trust for the payment of the principal and interest on the said new bonds, and shall collect and receive all payments and dividends paid and made on said old bonds and coupons so held by them from any person authorized to pay the same; and shall pay the amounts thus received to the Public Treasurer, to be applied by him to the payment of the interest on the new bonds. The old bonds shall not be canceled, but shall remain in force until the Governor shall direct the same to be delivered to the Public Treasurer for cancellation."

Another act for the settlement of the State debt was passed on March 14th. It authorizes the State Treasurer to exchange with the Albemarle and Chesapeake Canal Company the

stock of the State in said company for the bonds of North Carolina issued before the 20th day of May, 1861; the exchange to be at par, and no interest to be allowed upon the bonds. The exchange must be made, if at all, by January 1, 1880.

By another act convicts are to be apportioned among the works of internal improvement authorized to receive them, but in no case are there to be less than five hundred on the Western North Carolina Railroad, nor less than three hundred on the Cape Fear and Yadkin Valley road; and all convicts are to be kept at work on State roads until called for by those authorized to have them.

A fine or imprisonment at the discretion of the Court, or fifteen years in the penitentiary, has been made the penalty for abducting or inducing to leave, or conspiring with another to abduct or induce to leave, any child under fourteen years residing with father, or mother, or uncle, or aunt, or brother, or elder sister, or at school, or with a guardian. The only exemption is to the abductor or inducer who may be of nearer kin to the abducted than the abductee.

The probate judge, sheriff, and county commissioners of each county are "a committee for the relief of the blind and maimed." It is made the duty of the probate judge to notify all persons in his county who lost sight, or both hands, or both feet in the Confederate service, that on proof of the fact before the committee they are entitled to receive from him \$5 monthly for life.

It was made unlawful for any fire-insurance company, unless investing all its assets within the State, to transact any business or receive any premium against loss by fire unless and until it has deposited with the Public Treasurer \$10,000 in United States bonds. On this deposit, in case of a company's failure to satisfy a final judgment against it, the Treasurer is to raise money enough to pay judgment, interest, and costs; and thereafter the company must make its margin good or cease to do business. This law applies to existing judgments.

Any person who habitually, whether continuously or periodically, indulges in the use of intoxicating liquors to such an extent as to stupefy his mind and to render him incompetent to transact ordinary business with safety to his estate, shall be deemed an inebriate within the meaning of the statute, provided the habit of so indulging has continued a year.

Tar shall be hereafter sold by weight, at the rate of 280 pounds to the barrel, under the same rules that apply to turpentine as to excess of weight.

A bill to revise and consolidate the school law was introduced in the House on the 27th of February, passed its three readings, and was ordered to be engrossed and sent to the Senate for concurrence. It was accordingly transmitted to the Senate, passed its three readings in that House, was enrolled, subjected to the examination of the Committee on Enrolled Bills, and

reported by them as correctly enrolled. The journals further show that it was duly ratified and transmitted to the office of the Secretary of State on the last day of the session, together with a large number of other acts. Upon ascertaining after the adjournment of the Legislature that the signatures of the presiding officers were wanting, the Secretary did not feel authorized to receive it as a law. This question was presented by the facts: Is it the duty of the presiding officers to sign the bill after the adjournment of the General Assembly, they still being members and presiding officers, with a term of office of two years, commencing from the time of their election as members? The presiding officers declined to sign the bill because the Legislature had adjourned, and stated that they supposed they then had no power to do it. The Secretary of State declined to receive it, as it was not signed. The Superintendent of Public Instruction applied to the State Attorney-General for his opinion. He said:

The Constitution commands them to sign all bills which have passed three readings in each House; and while it is usual and proper that this should be done during the session, yet the law does not prohibit them from signing after adjournment in a case where the facts and circumstances, such as the above, so fully show the necessity for it, and so clearly justify it. The evidence in this case is plenary that the bill passed. The part taken by the two Houses has satisfied the requirement of the Constitution so far as they are concerned. Their presiding officers should now perform the part which the same instrument requires of them—affix their signatures that the law may be valid and operative. Even although the bill has "passed into a law" by the concurrence of the Houses, yet it amounts to nothing without the signatures of the presiding officers; and their signatures to a bill which has not passed amount to nothing if it affirmatively appears from the journals that it did not pass. The Constitution requires both the passage and the signatures to give life to the enactment. The signatures are an additional means and constitutional method of authentication, and can not be dispensed with, because the Constitution says, "and shall be signed by the presiding officers of the two Houses."

Suppose the bill to raise and collect revenue had passed under the facts and circumstances attending the school bill, and had not been signed; would the Governor incur the expense to the public of convening the Legislature in extraordinary session, that it may be again considered in order to get funds to carry on the government? or would the Speakers sign after adjournment? or would the necessity arise to institute an action to compel them by *mandamus* to perform the ministerial act of writing their names? I take it they have no discretion about signing a bill, whether they approve the wisdom of the legislation or not; and it seems to be clear, therefore, that a *mandamus* would lie in case of refusal. (Cotten vs. Ellis, 7 Jones, 545; Bailey vs. Caldwell, 68 N. C., 472.) And furthermore, if this law remains inoperative by reason of the failure to sign as aforesaid, it amounts to the exercise of a power not granted to any officer of our State government. It would be in effect a veto, and brought about by non-action.

Legal proceedings were commenced to compel the President of the Senate and the Speaker of the House to sign the school bill. On the relation of the Superintendent of Public Instruction, in his official capacity and as a tax-

payer, and of the Attorney-General, an application for a writ of *mandamus* was made, and the action thus instituted. The case was called before Judge Earl of the Circuit Court. Both plaintiffs and defendants were ably and fully represented. This being the first time that defendants had been called to answer, they moved for leave to withdraw their answer and substitute a demurrer. Objected to by plaintiffs, but afterward admitted by the Judge. The demurrer objected that the complaint did not state that the signing by the defendants was essential to the validity of the act. The Judge ruled that expressions in the complaint, such as "required by law to authenticate," etc., were sufficient to express the same or a sufficiently equivalent answer, and overruled the demurrer. Exception by defendants. The answer was then filed. In the settlement of the issues the Judge ruled that he could not take the admissions of defendants as conclusively settling the facts on which a public statute might depend, and ruled that the plaintiffs must produce proof. It was agreed that the Judge should try all questions of fact, a jury being waived. The plaintiffs disclaimed charging any intentional wrong-doing by the President of the Senate or the Speaker of the House, and the testimony established the fact that the announcement that the presiding officers had signed the bill was made during the absence of those officers while engaged in the library signing the various bills handed to them by the Committee on Enrolled Bills in the last hours of the session; and the defendants stated that the absence of their signatures to the bill was not called to their attention until after the adjournment of the Legislature, and based their refusal to sign afterward upon the ground that the Legislature had adjourned; that they could not sign except in the presence of the two Houses; that it was a legislative act, and their signing would be a departure from the uniform custom of the General Assembly. The Judge decided that the *mandamus* issue to compel the President of the Senate and the Speaker of the House to sign the bill known as the school bill. An appeal was taken to the Supreme Court. A similar *mandamus* was demanded by the Superintendent against the Secretary of State commanding him to receive the bill. But the Court decided that the Secretary could not be compelled to receive the bill until it was signed.

In September the Supreme Court rendered its decision in the case, holding: 1. That the presiding officers of the General Assembly should sign a bill before it becomes a law, and should do so during the session of the General Assembly; and, 2. That affixing their signature by the Speakers to a bill is the finishing act of legislation, and is not under the control of the Court. This decision was based on two general principles: first, that the executive, judicial, and legislative departments are ever to be kept separate; and, secondly, that the sign-

ing by the Speakers is a legislative act. Until this legislative act is complete, the legislation remains unfinished; and if the legislation be unfinished, the bill is not finally passed so as to be a law. The bill not having been passed into a law, neither the Speakers nor the Court, nor any other person or power, can make it a law after the adjournment of the Assembly. The decision is a complete vindication of the conduct of the Speakers in withholding their signatures when the fact was made known to them that the bill remained unsigned after the Legislature had adjourned. Had they, subsequent to the adjournment of the Assembly, gone on and set their names to the unpassed bill, it would not have helped matters; the bill would still have been in its old category of an incomplete legislative enactment.

The number of public schools taught during the school year of 1878 was 3,354 for white and 1,707 for colored people. Number of white pupils in attendance, 145,155; colored, 81,290. The average length of school terms was nine weeks, and the average monthly salary of teachers amounted to \$23.24½. During the year, among the whites, 745 certificates of the first grade, 1,295 of the second, and 446 of the third were issued. With the colored people it stood 169 of the first, 415 of the second, and 652 of the third. The following were the receipts of the school fund for the year: From State Treasurer, \$808.94; poll-tax, \$168,566.92; property-tax, \$122,990.89; fines, forfeitures, and penalties, \$13,189.65; liquor licenses, \$21,159.34; auctioneers' tax, \$102.52; other sources, \$15,945.35. Balance on hand at the close of last school year, \$108,050.06. Total, including balance on hand, \$450,818.61. The following shows the disbursements for the same year: Paid for white schools, \$187,390.81; colored, \$104,026.21; for school-houses and sites, for whites, \$8,887.57; colored, \$3,976.47; to county examiners, \$1,200.80; treasurers' commissions, \$9,994.26; clerks of county boards of education, \$2,260.78; insolvent taxes refunded, \$1,242.49; other purposes, \$3,760.57. Total disbursements, \$322,711.96. Balance on hand September 1, 1878, \$129,362.82. The University Normal School was opened on June 18th for a session of about six weeks, with 12 instructors and 500 students.

In an amendment to an act relating to railroads, it was enacted that it shall be unlawful for railroad companies operating in the State to pool freights, or to allow rebates on freights; and all persons, whether railroad officials or others, who shall be concerned in the pooling of freights, or who shall directly or indirectly allow or accept rebates on freights, shall be guilty of a misdemeanor, and on conviction shall be fined not less than one thousand dollars and imprisoned not less than twelve months.

On January 21st an election of a Senator in Congress was made by the Legislature. In the Senate, Governor Vance received 33 votes to 12 for R. P. Buxton and 1 for A. G. Merri-

mon. In the House, he received 77 votes to 39 for Buxton and 2 scattering. On the 28th he tendered his resignation of the office of Governor, and on February 5th was succeeded by Lieutenant-Governor Thomas J. Jarvis. Mr. Jarvis is a native of the State, born in 1836, and the son of a Methodist minister. His early education was achieved under many disadvantages, owing to the straitened circumstances of his father, but he managed to take a full course at Randolph-Macon College, and graduated with honor in 1860. Soon afterward he entered the Confederate service, and remained in the field until May 17, 1864, when he was badly wounded near Drury's Bluff, Va., and compelled to retire from the army. Subsequently he studied law, and began to practice in 1866; was member of several Legislatures, an elector from his district on the Seymour ticket in 1868, also elector at large on the Greeley ticket, and a member of the Constitutional Convention of 1875. James Lowrie Robinson, Lieutenant-Governor, is also a native of the State, served through the war with more than ordinary gallantry, and has since occupied various positions of public trust.

It was enacted for the benefit of land-owners whose land had been sold for taxes before January 1, 1879, that any person who shall within one year from date of this law pay to the Public Treasurer the taxes due at time of sale and ten per cent. upon that amount, all subsequent taxes, and costs and expenses, shall be entitled to a deed of reconveyance. This the Secretary of State will issue upon exhibition to him of the necessary tax-receipts and the payment to him of \$1 for the deed. Another act makes provision for land-owners who have inadvertently failed to redeem their lands until the day of grace has expired or is about to expire. In such cases the law extends the time to January 1, 1881. For redemption of any such land (provided the title is yet in the State), it is necessary for the dispossessed owner to pay the taxes due at time of sale and the percentage required by law, all costs of advertising and executing a deed, and all taxes that would have been due had not the land passed into the State's possession.

It is alleged in the preamble to an act to regulate marriageable kinship that "many persons in this State, in estimating what degree of kinship is nearer than first cousins, compute kinship by the half blood as being only half so near as the same degree of kinship by the whole blood." Wherefore, on February 27, 1879, it was enacted that "hereafter, in this State, whenever the degree of kinship shall be estimated with the view to ascertain the right of kinspeople to marry, the half blood shall be counted as the whole blood."

The session closed on March 18th. It consisted of sixty-six working days, during which some nine hundred bills and resolutions were introduced and considered—an average of nearly fourteen per day. Of the whole number,

about four hundred and fifty—one half—were ratified and became laws, an average of seven per day. This amount of work was believed to be unparalleled in the history of legislative sessions in the State.

By the public records it appears that 1,973 pieces of real estate have been sold for taxes amounting to \$17,404, and bid in by the State. The time allowed for their redemption has expired.

The United States Fish Commission has commenced operations in the State. About six million young shad were hatched in the spring by the Commission in the Albemarle Sound, all but a sixth of which were placed in the waters of the State. The total number released since the beginning of their introduction is about eight million. Of these the Roanoke and Neuse have received seven hundred thousand each; the Cape Fear and Tar half a million each; the Meherrin, Nottoway, and Blackwater over two hundred thousand each, with several millions released at their mouths; the Yadkin and Catawba two hundred thousand each above Salisbury. In the latter streams the General Government and the State of South Carolina, which has now an established commission, have placed between two and four hundred thousand.

An election for three Judges of the Supreme Court and for those for some circuits occurred during the year. For the Supreme Court, a Democratic Convention nominated William Nathan Harwell Smith for Chief Justice, and Thomas S. Ashe and John Henry Dillond for Associate Justices. They were all elected.

The crops of the State were much retarded by the cold weather of the spring. The area of corn was equal to the average, and the yield was ample for the home supply. The acreage of cotton was increased in fifteen counties and diminished in two, yet there was a full crop. The crop of tobacco was a fair average yield and unexcelled in quantity. The area devoted to grasses has been increased within the past three years not less than 50 per cent. Clover, lucerne, orchard, timothy, and red-top are being introduced and tested in all sections of the State with encouraging results.

The desire for improvement in agriculture has brought out very full information of the condition of the State. Over 60 per cent. of her entire area is in woodland, one county, Brunswick, having over 90 per cent., and no less than eleven others between 80 and 90. Some of these are near the seacoast and others among the mountains, with a difference of altitude of more than 6,000 feet, which, with a difference of latitude, surface, and soil, renders the State remarkable for the variety of its flora, ranging from the palmetto to the pine, from tropical or semi-tropical forms to those purely Alpine in character. Eastern North Carolina has furnished the world with nearly all the pitch, tar, turpentine, and rosin that have been consumed as naval stores for the last

century. Within the last ten years factories have been built in various portions of Central Carolina for the manufacture of wagon-spokes, hubs, and axe-handles, that require a tough hard wood, using for this purpose the oak and hickory that are the peculiar growth of that section. Considerable quantities of locust pins, used in ship-building, have been shipped from depots on the Western North Carolina Railroad. The yellow locust is found abundantly along the eastern slope of the Blue Ridge and in the mountain gorges, in the entire western district of the State. Within the last two years large quantities of black-walnut lumber—or rather trees, for it is shipped in the log—have been sent to the Eastern markets, and even to France, to be manufactured into furniture, pianos, organs, etc. These are but a very small portion of the useful trees that are to be found in the forests of the State. The white walnut or butternut is largely used as trimming for black walnut. The white ash is another wood that is used in the manufacture of light-colored furniture, or combined with dark woods for decorative purposes. The wild cherry is found in the mountains in great abundance and of fine quality, and is susceptible of a higher polish than the same variety that grows in the lowlands. In addition to these are the maples, the birch or mountain mahogany, suitable for articles that require a fine-grained wood susceptible of a high polish, the poplars and the different varieties of oaks for the ordinary uses of lumber, and the white pine found in the mountains, that is only equaled by the forests of Maine and the Northwest. In the arts where a wood of a soft character and fine grain is needed, the *Magnolia acuminata* or wild cucumber-tree is all that could be desired, and grows abundantly in the mountains west of the Blue Ridge.

There are no great valleys in the State comparable to the Valley of Virginia or the Valley of East Tennessee. But each of the numerous rivers has hewn out a narrow valley for itself, in the bottom of which lies its present channel. The most considerable and best defined of these are found in the mountain regions. The most notable and the largest among them is the valley of the French Broad, which is about fifty miles long, and has a varying breadth of from nineteen to twenty-five miles, having in Transylvania County a great extent of level and very productive bottom-land; but for the most part it is traversed by many spurs or ridges and secondary chains of mountains, from whose intervening valleys and gorges come the numerous tributaries of the French Broad River. The other mountain valleys are of the same description, but are generally narrower and basin- or trough-like, and have been excavated in the same manner by the rivers which drain the successive areas between the transverse chains, and are flanked by numerous projecting spurs and ridges of the surrounding mountains, between which a multitude of subordinate tribu-

tary streams ramify. Eastward of the Blue Ridge, in the Piedmont region, are the valleys of the upper Catawba and Yadkin, which may in a general way be considered as consisting of the entire basins or troughs between the parallel chains which inclose them, and so are fifteen or twenty miles wide; but the level lands along these streams are interjected between the mountain spurs, often quite to the foot of the Blue Ridge.

The State embraces an area of 54,000 square miles, over which are distributed 1,300,000 souls. The length from east to west is 500 miles, and the average breadth of the State is a little over 100 miles. Nearly 4,000 square miles' surface of the territory is covered by the water of the rivers, bays, and sounds of the east. The water-transportation facilities of that section, improved and unimproved, are not surpassed in any State. No State possesses greater manufacturing facilities; her agricultural resources are unlimited; her products as varied as they are valuable; soil rich and inexhaustible; climatic advantages not approached by the neighboring States; while in mineral wealth North Carolina stands without a rival. The mountain region embraces an area of 5,400 square miles, of an average elevation of 2,600 feet; the Piedmont region, 6,000 square miles, elevation 1,000 feet; the middle section, 12,000 square miles, 650 feet elevation; the sub-eastern region, 9,000 square miles, 200 feet elevation; the coast region, 15,000 square miles, with an average elevation of 50 feet. Almost if not quite every crop produced in the United States is grown in one region or another of the State, so that the widest diversification is practicable. Corn, cotton, and tobacco claim the first attention of the people, three fourths of all classes of whom are engaged in agriculture; but fruits, grasses, stock, and grapes are largely cultivated, returning a rich and satisfactory yield to the industrious husbandman. Mining and manufacturing are beginning to attain a magnitude of no small importance, and the work of general development of all the varied industries and resources is progressing with advancing spirit. The annual value of farm products is sixty millions, and of manufacturing twenty millions of dollars. The cash products of those engaged in mining, other labor than that engaged in agriculture and manufacturing, the professions, together with those employed in trade, transportation, and commerce, should, it is estimated, swell the annual product of North Carolina to as much as a hundred million dollars.

There are seven large rivers east of the Blue Ridge, and seven west of it, the former navigable more than 1,000 miles, and one of the latter (the Tennessee) 1,000 miles to the Mississippi. The Cape Fear is navigable to within 115 miles, in a straight line, of the Blue Ridge. Some sixty years ago the tributaries of the Yadkin and Catawba were navigated almost to the foot of the Blue Ridge. The water-power

of the State aggregates more than three millions of horse-power, exceeding that of all the steam-engines of Great Britain or the United States. More than 1,200 miles of railroad are already built, and several hundred more projected. The climate corresponds with that of

northern and middle Italy and southern and middle France—ranging, between its eastern and western borders, as that from the Gulf of Mexico to Canada. Its natural and agricultural productions are consequently of extraordinary variety.

O

OBITUARIES, AMERICAN. ALBERT, WILLIAM J., born in Baltimore, August 4, 1816, died in that city, March 29th. He was educated at Mount St. Mary's College, Maryland, and became a merchant, but retired from business in 1856. In 1864 he was president of the Maryland Electoral College, which voted for President Lincoln. He was one of the founders of the First National Bank of Maryland, and a director in insurance companies, savings banks, and manufacturing companies. He was a Republican member of the Forty-third Congress from the Fifth Maryland District, serving from December, 1873, to March, 1875.

ANDERSON, RICHARD H., a lieutenant-general of the Confederate army, born in South Carolina in 1816, died in Beaufort, June 26th. He entered West Point in 1838, and graduated in 1842. On entering the army, his promotion was rapid until he reached the grade of captain of dragoons, which position he held until 1861, when he resigned and joined the Confederate army. He was at first commissioned colonel of infantry. Owing to his bravery and valuable services in many of the great battles of that memorable period, he was promoted step by step until he reached the grade of lieutenant-general. Since the close of the war, General Anderson led a life of retirement.

AVERY, Judge DANIEL DUDLEY, born at Baton Rouge, Louisiana, April 12, 1810, died at his residence on Petite Anse Island, June 8th. He entered Yale College in 1826. On his return to Baton Rouge he studied law, and was admitted to the bar in 1832. The same year he was elected to the General Assembly of the State, and served for four years. He was joint commissioner with Mr. Maunsel White in superintending the erection of the State House in Baton Rouge. He was afterward thrown out of politics by the breaking up of the Whig party. In 1860 he became Judge of the Florida parishes. After the capture of New Orleans in 1862 he resigned his judgeship and lived on his Petite Anse plantation. The necessity of destroying the salt-works on that island drew General Banks thither in 1863, and Judge Avery went to Texas and remained there until the close of the war.

BRADY, ALEXANDER, a printer, born in 1795, died in Brooklyn, New York, July 26th. He was believed to be the oldest printer in the country at the time of his death. He had been

a member of the New York Typographical Society more than sixty years, and connected with the Methodist Book Concern for forty-five years.

BRINSMADE, HORATIO N., D. D., born at New Hartford, Connecticut, December 28, 1798, died at Roseville, New Jersey, January 19th. He graduated at the College of New Jersey, Princeton, in 1822. For nine years he was an instructor in the Asylum for the Deaf and Dumb at Hartford. In 1828 he was ordained by the North Congregational Association, and preached one year at Hartford. In 1831 he went to Collinsville and established a church, where he remained until 1834, when he went to Pittsfield, Massachusetts, where he was pastor until 1841. In that year he was called to the pastorate of the Third Presbyterian Church of Newark, New Jersey. In 1853 he resigned on account of his wife's health, and went to Beloit, Wisconsin, where he was pastor of the First Congregational Church for seven years. In 1860 he returned to Newark to take charge of Wickliffe Chapel, and remained in charge until his death.

CRAVEN, ALFRED W., a civil engineer, born in New York, where he died on March 29th. Early in life he entered the profession of civil engineer, and in 1837 he was engaged, in connection with General George S. Greene, in the construction of an important public work near Charleston, South Carolina. In 1849, when the law was passed organizing the old Croton Water Board, Mr. Craven was made Engineer Commissioner, which position he held until 1868, at which time he resigned for the purpose of going to Europe. Among the many important works projected and carried out by Mr. Craven during his connection with the Croton Water Board were the building of the large reservoir in Central Park, which was completed in 1867, the enlargement of the pipes across High Bridge, and the construction of the reservoir at Boyd's Corners, Putnam County. He also caused to be made an accurate survey of Croton Valley, with a view of ascertaining its capacity for furnishing an adequate water-supply, and was largely instrumental in securing the passage of the first law passed by the Legislature establishing a general sewerage system for New York. He was one of the original projectors and the first President of the American Society of Civil Engineers, organized in 1852, and was also a commissioner, with Allan Campbell, in the work of build-

ing the underground railroad through Fourth Avenue.

ELMORE, Colonel HENRY M., son of Judge John A. Elmore of South Carolina, born in that State January 28, 1816, died in Waverley, Texas, February 21st. Early in life he moved with his father to Autauga (now Elmore) County, Alabama. He lived in Tuskegee, and for two years was Probate Judge of Macon County. He married the niece of Governor Fitzpatrick of Alabama. In 1854 he removed to Texas, and settled in Walker County, where he resided until his death. He was elected to the State Senate in 1859 and served two years. At the outset of the war he enlisted as a private in Captain Lewis's company. He was elected colonel of the 20th Texas Infantry, and no man left the army with a better record or retaining more of the confidence of his men. After the war he resumed the practice of the law. His influence was widely felt; he was a man of great firmness and depth of conviction, and to the close of his life he took an active interest in all affairs of government.

FOOTE, Major R. E., a lawyer of distinction, born in Mississippi in 1842, died in Aurora, Nevada, May 23d. He was a son of Henry S. Foote, once Governor and United States Senator of Mississippi. Major Foote entered a regiment of the State at the commencement of the late war, and served with distinction until its close. In 1866 he settled in Idaho, where he remained until 1875. He practiced law in Idaho City, Placerville, Centerville, and other places in the Basin, and was District Attorney for several years. Subsequently he resided in Salt Lake City, Eureka, and Virginia City, finally settling in Aurora and Bodie. He had been engaged in the defense of a person charged with murder, and the verdict was guilty in the second degree. In this result he was considerably disappointed, hoping for a less serious issue. He was in one of the small rooms off the main portion of the hotel, sitting somewhat low in an arm-chair, with his feet resting on the rounds of another chair, and his hands clasped over his head, as if in deep thought, or possibly dozing. People were constantly passing through the room, and noticed nothing peculiar in his position. Upon some one speaking to him, however, and no response coming, it was discovered that he was dead. How long he had been dead was not known, but it was believed to have been half an hour before the fact was discovered.

FORD, BUDD G., born in Salem, New Jersey, March 2, 1840, was drowned at Ocean City, Maryland, July 20th. At an early age he was taken from school and engaged in the pursuits of business, in which he became quite successful. He was elected to the House of Delegates in the Maryland Legislature in 1872 for the term of two years, and in 1875 he was elected State Senator for four years.

GARRARD, KENNER, born in Kentucky, died in Cincinnati, May 15th. He was appointed a

cadet at West Point in 1847, and graduated in 1851. He continued in service till 1861, when as lieutenant of cavalry he was captured by Texans and exchanged in 1862. Subsequently in 1862 he was appointed colonel of the 146th New York Volunteers, and was in several engagements, and rose to the rank of brigadier-general of volunteers in 1863. His gallantry was several times recognized by promotions in the regular army, and in 1865 he was made brevet major-general. He resigned in 1866.

GARRETTSON, MARY RUTHERFORD, died near Rhinebeck, on the Hudson River, March 7th, in the eighty-seventh year of her age. She was the daughter of Freeborn Garrettson of Maryland, a prominent Methodist clergyman, who died in 1827. Her mother was Catherine Livingston, the daughter of Robert Livingston of Clermont, and sister of Robert R. Livingston, Chancellor of New York State, and of Edward Livingston, author of the Code of Louisiana, and at one time Minister to France. She was a lady of marked intellectual ability, and was well known for her benevolence.

HAMPTON, Major WADE, Jr., son of Governor Hampton of South Carolina, born in that State in 1838, died December 23d. His mother was Margaret Preston. Young Hampton served through the war with distinction. His brother, Preston Hampton, was killed before Fredericksburg, and almost at the same moment Wade was severely wounded. Their father was on the field. Apprised of their fate, he rode up to the ambulance, and after one look at his sons, one dead and the other apparently dying, without dismounting or delay, he returned to his post of duty at the head of his cavalry division. Major Hampton recovered, and received his promotion. After the war he became a cotton-planter in Mississippi. In the summer of 1879 he married.

IZARD, J. ALLEN SMITH, a military officer, born in Pennsylvania in 1810, died at Richfield Springs, New York, July 27th. He graduated at West Point Military Academy, in 1829 under the name of J. Allen Smith, and was commissioned as second lieutenant of the 3d Artillery. From August 30, 1829, to June 27, 1835, he was Assistant Professor of Geography, History, and Ethics at the Military Academy. His next service was in the Florida war, 1836-'37. Resigning his commission April 30, 1837, he married a daughter of Judge Huger of Charleston, South Carolina, and became a successful rice-planter near Savannah, Georgia.

JOHNSTON, AMOS R., was born in Tennessee in 1812. He began life as a printer, and in partnership with General Zollicoffer edited a newspaper in Tennessee. He removed to Mississippi in 1830. He settled first at Clinton, and then in Jackson, continuing his career as editor. He was an ardent adherent of the Whig party. In 1836 he represented Hinds County in the State Legislature. In 1839 he became Clerk of the Circuit Court of Hinds, and in 1845 was elected Judge. He was a

delegate to the State Convention of 1861, and was on the Union side. In the Convention of 1865, which repealed the secession ordinance, he was an influential member. He lived withdrawn from public life until 1875, when he was elected State Senator by the Conservatives and Democrats. He served until 1877, when declining health forced him to resign. He did much to promote improvements in Raymond and in Jackson. He went north in search of health, but died in Cincinnati, and on the 28th of June was buried in Jackson, Mississippi.

MEAD, WILLIAM COOPER, D. D., LL. D., born in Greenwich, Connecticut, died July 17th. He received a systematic education, entered the ministry in the Protestant Episcopal Church, and in 1836 became rector of St. Paul's Church, Norwalk, where he remained till his death, a period of more than forty-three years. He was a Freemason, and took great interest in the order. At different times he was Grand Chaplain of the Grand Lodges of Connecticut and Pennsylvania, and of the Grand Chapter of Connecticut. He was made a Mason in 1824, in Westchester Lodge, No. 46, of White Plains, New York. He was elected an honorary member of St. John's Lodge, No. 6, of Norwalk, in 1849, and was chaplain and trustee for many years. He was one of the four Episcopal clergymen in the United States who have been rector of one parish for a period of forty years. The cane which he held at the time of his death on account of having been longest in a parish of any rector in the State, went to the Rev. B. M. Yarrington of Greenwich, who has been rector there for forty years. Dr. Mead received the degree of LL. D. from Trinity College. He died suddenly, soon after returning from a ride.

MOYNAHAN, REV. CORNELIUS, born and educated in Ireland, died in New Orleans, February 13th. He emigrated to America in company with his brother, the Rev. J. Moynahan, completed his theological course in New Orleans, was ordained priest by Archbishop Blanc in 1848, and received the Third District as his field. At that time it had no Catholic organization. Father Moynahan built a wooden church for the use of the English-speaking residents. This was afterward converted into a parochial school, and replaced by a large and beautiful brick structure called St. Peter's church. He was a man of ardent, impulsive eloquence, and his influence extended far beyond his own denomination. Like his elder brother, he was canon and counselor of his Grace the Archbishop.

NEW, Major JOHN H., born in Louisville, Kentucky, in 1827, died in New Orleans, January 17th. He procured an education by his own labor, graduated at Oakland College, Mississippi, continued his studies while acting as private tutor, and afterward entered the Cambridge Law School. His first intention was to pursue literature as a profession, and he wrote many graceful minor poems; but after com-

mencing the study of law he devoted himself to it exclusively. He was already in successful practice at Baton Rouge when the war broke out, in which he volunteered as a junior lieutenant, and reached the rank of adjutant-general and inspector-general of division under Stonewall Jackson. After its close he settled in New Orleans with broken health and ruined fortune, forming a law partnership with his companion in arms General Henry Hays. The health of the latter soon gave way, but the talent and energy of the junior partner insured to the firm a rapid and brilliant success. He was able and eloquent, and these qualities won him the professional success he coveted. Just as its highest distinctions lay within his grasp he was attacked by consumption, and he traveled for several years in Japan, through Greece and Spain, and the less frequented parts of Europe and Asia. He was fond of art, and delighted in collecting objects of virtue and curiosities from every country. All the while his disease was making slow but unrelenting progress, and he reached home only to die.

PECK, ASAHEL, born in Royalston, Massachusetts, in September, 1803, died at Jericho, Vermont, May 18th. His father removed to Vermont in 1804, and the son, after fair diligence in youth as a student, was admitted to practice law in 1832. In 1850 he was made a Judge of the Circuit Court, which position he held until the Court was abolished. In 1860 he was one of the State Senators from Chittenden County, and was elected Judge of the Supreme Court, which office he held until 1874, when he was elected Governor. He was simple in manner and habits, and some said grandly so in thought. His memory was very tenacious, and through a long life he applied his mind to the law, and thus was regarded as having a knowledge of it unsurpassed by that of any other man. He was never married, and it has been observed that this was perhaps because he knew the law was a jealous mistress. A man of strong convictions and will, with a temper that could occasionally burst forth, he was yet tender and gentle to the weak; so much so that it was said his one failing as a Judge was "riding" a case for the weaker party. "With a corporation on one side and a woman on the other, the law generally seemed to the jury pretty clear for the woman after the Judge's charge; and what made it bad for the corporation was that it was good law too." Being honest and straightforward withal, he had the respect and confidence of the people beyond any other man in the State.

PELHAM, General WILLIAM, died at his residence near Menchaca Springs, Travis County, Texas, June 8th. He was born in Maysville, Kentucky, April 10, 1803. He moved to Arkansas early in life, and married the sister of Governor Conway. In 1841 he was appointed Surveyor-General of Arkansas by President Harrison, and in 1845 reappointed by Polk. He filled this important office for eight years.

to the entire satisfaction of the people and Government. In 1853 President Pierce appointed him Surveyor-General of New Mexico. It is worthy of note that this appointment was urged by all the Senators, Whig and Democratic, from the States of Missouri, Arkansas, Louisiana, and Texas. New Mexico had then been recently acquired by the Government. To the ordinary duties of the surveyorship was added the delicate task of adjudicating private land-claims. Their adjustment in a manner just at once to the Government and the claimants was a severe test of character. Distrustful as the Mexicans were of American tribunals, they never once impugned his integrity. He was re-appointed to his office by President Buchanan. Shortly before the outbreak of the war he resigned it, and returned to his home in one of the loveliest valleys of Texas. His only son was killed on the field of battle.

PIERCE, Dr. LOVICK, born in Halifax County, North Carolina, March 17, 1785, died at Sparta, Georgia, November 9th. In 1804 he entered the Methodist ministry. He afterward studied medicine in Philadelphia and practiced for a time, but soon returned to the pulpit. Dr. Pierce was chaplain in the army in the war of 1812. He was a delegate to the General Conference of 1836, 1840, and 1844, and after the organization of the Southern Church, in 1846, sat regularly in its highest court. He took part in the proceedings of the Louisville Conference of May, 1874, where he had a son and a grandson, three generations being thus represented in the same body. The son referred to, George Foster Pierce, had then been a bishop twenty years. Dr. Pierce, notwithstanding his advanced age, continued to preach occasionally up to within a few months of his death. In the previous year he published a series of theological essays in one of the Methodist periodicals, showing that his intellectual vigor and his interest in the Church were undiminished. On the occasion of his ninety-third birthday, in 1877, he held a family reunion, when it was made known that he had seventy-two descendants.

SCHLEICHER, Hon. GUSTAVE, born in Darmstadt, Germany, November 19, 1823, died in Washington, D. C., January 11th. He was educated in the University of Giessen, became a civil engineer, and was employed in the construction of various European railroads. In 1847 he emigrated to Texas, and in 1850 settled in San Antonio. He was elected to the State Legislature in 1853, and was State Senator in 1855 and 1856. He was elected to Congress in 1874, and reelected by large majorities in 1876 and 1878. He was a man of splendid physique, weighing 425 pounds. The doors of the House of Representatives had to be taken from the hinges to permit his coffin to be carried into the hall. He was one of the ablest opponents of paper money.

SCRIBNER, JOHN BLAIR, died in New York, January 22d. He was the eldest son of the late Charles Scribner, and was named after his

grandfather, John I. Blair, a wealthy contractor in New Jersey. He entered Princeton College, but was not graduated, as he preferred to leave college to assist his father in business. When the latter died, Mr. Scribner became a partner in the new publishing house of Scribner, Armstrong & Co., which was merged in the firm of Charles Scribner's Sons on the death of Edward Seymour and the withdrawal of Mr. Armstrong. He was thoroughly familiar with his business, ambitious and industrious, and was highly esteemed by his associates.

SEVIER, ROBERT, born in Greenville, Tennessee, October 30, 1807, died in Richmond, Missouri, May 16th. He entered West Point Military Academy in 1824, was a classmate of Jefferson Davis and a schoolmate of Robert E. Lee and Albert Sidney Johnston, and graduated with the highest honors of the institution. During the Florida Indian war he was in active service, and afterward on the Texas frontier. He resigned his commission in October, 1837, removed to Ray County, Missouri, in 1840, and was appointed Clerk of the Circuit Court in 1845. This position he continued to hold by election for twenty years, but was removed by the ousting ordinance at the commencement of the late war, although a strong Union man. He was a strict Presbyterian. His first wife was a sister of General Sibley, and his second a sister of the late Austin A. King, ex-Governor of Missouri.

SHERMAN, General THOMAS W., died in Newport, Rhode Island, March 16th. He entered the Military Academy in 1832, distinguished himself in the Creek, Florida, and Mexican wars, and was commissioned captain May 28, 1846. He also did good service in the Indian troubles in Minnesota and in the Lecompton troubles in Kansas. He was made lieutenant-colonel of the 5th Artillery May 14, 1861; brigadier-general of volunteers May 17, 1861; and colonel of the 3d Artillery June 1, 1863. In October, 1861, he commanded an expedition to the Southern coast. He lost a leg at Port Hudson in 1863, being at that time commander of a division under Banks. He was made brevet major-general of the army in 1870, when he retired.

SHERMAN, Mrs., the wife of General Thomas W. Sherman, died in Newport, Rhode Island, March 12th. She was the daughter of the late Wilson Shannon, formerly Governor of Ohio, and about forty-five years of age. She went with her father to Kansas when he was appointed Governor of that Territory. She there met General Sherman, and was married at Lawrence. A few months previous to her death she had submitted to a painful surgical operation, from which she failed to rally, dying four days before her husband. They leave one son, a youth of sixteen years. She was a very estimable lady.

SLAUGHTER, WILLIAM B., born in Culpepper County, Virginia, April 10, 1798, died in Madison, Wisconsin, July 21st. He was educated

at William and Mary College, and in 1827 went to Bardstown, Kentucky, where he practiced law for two years, and then removed to Bedford, Indiana. In 1832 he was elected a member of the Indiana Legislature, and introduced into that body a set of resolutions strongly sustaining President Andrew Jackson's proclamation to the South Carolina nullifiers. He was appointed Register of the Land-Office at Indianapolis in 1833, and in 1835 at Green Bay. The same year he was elected a member of the Legislative Council of Michigan, and in that body introduced a memorial to Congress asking that the territory lying west of Lake Michigan be set off from Michigan and organized into a new Territory to be named Wisconsin. In 1837 he went to Wisconsin, and resided on a farm until 1845, when he returned to his birthplace in Virginia. In 1861 he removed to Middleton, Wisconsin, and in 1862 was a commissary of subsistence and quartermaster, which office he held for one year. He was an extensive writer for periodicals, made some contributions to encyclopædias, and published a work entitled "Reminiscences of Distinguished Men I have seen." He was much respected and esteemed.

SOMERBY, GUSTAVUS A., an advocate, died in Boston, July 24th. He was one of the oldest members of the bar in that city, having few or no superiors as an advocate before a jury. His name was made conspicuous by his success in the case of Leavitt Abbey, who was charged with the murder of Abijah Ellis in Boston.

SOULE, GIDEON L., a teacher, born at Freeport, Maine, July 25, 1796, died at Exeter, New Hampshire, May 28th. He was connected with Phillips Exeter Academy over fifty years, and was the principal of the institution from 1838 to 1873. His predecessor, Dr. Benjamin Abbot, was principal of the institution from its foundation in 1788 to 1838, and Dr. Soule was his associate during seventeen years. The great success of the Academy is largely due to the efforts of the latter.

STILLE, Hon. R. B., born in New Jersey in 1804, died in New Orleans July 9th. At the age of twenty-six he removed to Louisiana and engaged in mercantile pursuits. He received from President Taylor in 1849 the appointment of Surveyor of the Port of New Orleans. He was a member of the Legislature in 1866. At the time of his death he was in attendance on the Constitutional Convention as delegate from Sabine Parish.

THOMPSON, JOSEPH P., D. D., born in Philadelphia, August 7, 1819, died in Berlin, Germany, September 21st. He graduated at Yale College in 1838, studied theology at Andover and at New Haven, and was first settled over the Chapel Street Church in the latter city in November, 1840. From 1845 to 1872 he was pastor of the Broadway Tabernacle, New York, and during this extended ministry attained a high rank among scholars, churchmen, and *literati*. During this period Dr. Thompson, with others, founded "The New-Englander,"

the well-known quarterly, and also assisted at the birth of "The Independent." He was a manager of the American Congregational Union and the Home Missionary Society, and in 1852 originated the plan of the Albany Congregational Convention. In 1852-'53 he visited Egypt, Palestine, and other Oriental countries, and afterward devoted much time and research to Egyptology and other Oriental subjects. Among Dr. Thompson's most permanent literary works are: "Memoir of Timothy Dwight" (1844); "Lectures to Young Men" (1846); "Egypt Past and Present" (1856); "The Believer's Refuge" (1857); "Christianity and Emancipation" (1863); "Man in Genesis and Geology" (1869); "Theology of Christ from His Own Words" (1870); "Church and State in the United States" (1874); and a "Life of Christ," published in 1875.

THRASHER, JOHN S., born in Portland, Maine, in 1817, died in Galveston, Texas, November 10th. While yet a youth his parents removed to Havana, Cuba. He became a partner of the wealthy firm of Tyng & Co., but his tastes led him to journalism. In 1849 he purchased the "Faro Industrial," a daily Havana paper, the only organ of the Liberal party. He continued its editor until September 1, 1851, when General Concha suppressed it. On that day Lopez, the famous filibuster, was executed. Thrasher's sympathies and good offices were freely given to his four hundred unfortunate followers. He was court-martialed and condemned to ten years' imprisonment at hard labor in Ceuta, and perpetual banishment from Cuba. He was released after several months through the intervention of the United States Minister at Madrid, Mr. Barringer of North Carolina, whose wife appealed successfully to Queen Isabella. He afterward established in New Orleans a Sunday paper called the "Beacon of Cuba." From 1853 to 1855 he was an active member of the filibustering associations which organized the expedition under General Quitman. When the United States Government prevented its departure, the Cuban Junta dissolved and Thrasher went to New York. He found a position on the staff of the "Herald," and as a special correspondent traveled extensively through Mexico and South America. In 1856 he published an essay on Humboldt's "Personal Narrative," which he had previously translated into English. He also published various treatises on the social, financial, and political condition of Cuba, one of which, "Cuba and Louisiana," addressed to Samuel J. Peters, was received with marked attention. While still connected with the "Herald," he edited the "Noticioso de Nuevo York," a paper devoted to the interests of the Spanish-American countries. He married a Southern woman whose property was in Texas. During the civil war he remained at the South, and was the agent of the Associated Press at Atlanta. After the war he resumed his editorship, and had charge of Frank Leslie's "Ilus-

tracion Americana" in New York. Latterly he resided in Galveston, Texas.

TILGHMAN, RICHARD COOKE, born in 1807, died of pneumonia in Baltimore, March 14th. He graduated at the West Point Military Academy in 1828, and was appointed second lieutenant of the 1st Artillery, and first lieutenant in 1834. In 1836 he resigned his commission and served as civil engineer for the State of Maryland until the following year, and during the next nine years was employed by the Government in surveying sites for fortifications on Lake Champlain, locating and constructing roads in the Indian reservation in Iowa, making military reconnaissances of the approaches to New Orleans, and superintending harbor improvements on Lakes Erie and Michigan. In 1846 he took possession of his father's place, "The Hermitage," one of the finest estates in Maryland, and from that time devoted his mind much to agriculture. From 1857 to 1867 he was a colonel of Maryland militia, and subsequently Quartermaster-General of the State. One of the incidents of Judge Tilghman's life was acting as groomsmen at the marriage of General Robert E. Lee.

VANATTA, JACOB, a lawyer of distinction, born near Hackettstown, New Jersey, in 1825, died in Morristown, April 30th. His father was a poor farmer, and in early life the son was taught the trade of a tailor. Having finished his apprenticeship, he started for the West; but happening to lose his trunk on the first day, by which misfortune he was made destitute, he returned. Subsequently he went to Licking County, Ohio, where he taught school and became a clerk in the post-office. After a year he returned to Morristown, and by the assistance of friends read law and was admitted to practice in 1843, became counselor in 1853, and soon occupied a prominent position in the front ranks of his profession. He held only two important political posts during his life—one as a member of the State Legislature, and the other as Attorney-General of the State from 1875 to 1877. In his pleadings in court he was slow, deliberate, and cautious, seeking to carry his point by a purely legal argument. An illness, the result of overwork, after two weeks terminated in his death. His career is remarkable as indicating what energy and ability can accomplish. Few probably started from a humbler position and gained greater political and legal prominence.

WOODS, JACOB A., a physician, born in Hancock, New Hampshire, in May, 1810, died in New York, March 22d. He had resided in New York about twenty-one years. His specialty was the treatment of spinal diseases.

WOODWARD, Judge WARREN J., born in Wayne County, Pennsylvania, in 1820, died at Hampton, New York, September 23d. He was admitted to the bar in August, 1842, and began his career as a lawyer in Columbia County. In 1856 he was elected Judge of the new Twenty-sixth District, composed of the counties of

Columbia, Sullivan, and Wyoming, and was subsequently commissioned President Judge for ten years. In 1861 Judge Woodward was elected to the bench in Berks County, composing the Twenty-third Judicial District, and at the end of his term was reelected for the ensuing term of ten years. In August, 1874, he was nominated by the Democratic State Convention for Associate Justice of the Supreme Court, and was elected under the minority clause in the new Constitution. Judge Woodward, during all his career on the bench, bore out the reputation gained in the early days of his judicial career as painstaking and careful, possessing the judicial quality in a remarkable degree, and as giving decisions rarely overruled in the court of last resort.

WOODWORTH, Dr. JOHN M., born in Chemung County, New York, August 15, 1837, died in Washington, D. C., March 14th. Studying medicine, he acquired prominence in his profession, devoting himself especially to contagious diseases. He served in the Union army during the war, and was Medical Director during Sherman's march to the sea. In 1871 he was appointed Supervising Surgeon-General of the Marine Hospital service, which he elevated and made very efficient. In 1878 he organized a commission to examine into the yellow fever then raging at the South, and its report was made the basis for sanitary legislation by Congress. Under a law passed a few weeks before his death a National Board of Health was organized, of which he was a member, and he was preparing for the press a report on the yellow-fever epidemic which would, had he completed it, have been of great value.

WYMAN, LUTHER BOYNTON, born in Woburn, Massachusetts, in 1805, died in Brooklyn, New York, July 27th. He became well known in Boston as a singer previous to his removal to Brooklyn in 1840. There he became prominent in music, and in 1857 with others organized the Brooklyn Philharmonic Society, of which he was president until his death. He was one of the chief movers in building the Academy of Music. During the war he was active in organizing regiments, and gave a number of brilliant concerts, the proceeds of which were devoted to patriotic purposes. He was also one of the organizers of the Mercantile Library in Brooklyn. Four years ago he was stricken with paralysis, which resulted in his death.

OBITUARIES, FOREIGN. ANTONUCCI, ANTONIO BENEDETTO, an Italian cardinal, born September 17, 1798, died January 28th. He received his early training for the priesthood from the Benedictine monks of his native town Subiaco, and afterward went to the Roman College to complete his studies. In 1833 he was sent as chargé d'affaires and vice-superior of the Catholic missions to Holland. His mission proving successful, he was rewarded in 1840 with the bishopric of Montefeltre, whence he was translated two years later to the see

of Ferentino. In 1844 he was created Archbishop of Tarsus *in partibus infidelium*, and sent as nuncio to Turin, where he remained until 1851, when he became Bishop of Ancona and Umara, which latter see confers on its holder the title of count. In 1851 he was created cardinal. He remained at his post during the war of unification, and the Italian attack on and occupation of Ancona; but while attending to the duties of his see, he refused to recognize the new rulers, and constantly protested against their acts directed against the property of the Church.

BASTIDE, JULES, a French writer, born November 22, 1800, died March 3d. Having finished his studies, he took an active part in the agitation against the Restoration, and in 1830 was one of the first to plant the tricolor on the Tuileries. During the reign of Louis Philippe he was prosecuted on different occasions, and in 1832 he was even condemned to death after the riot at the funeral of General Lamarque, but escaped to England, where he lived two years. In the Revolution of 1848 he played a prominent part, and was for a time Minister for Foreign Affairs. He was the author of a number of political and historical works, the best known of which are "La République Française et l'Italie en 1848" (1858), and "Guerres de Religion en France" (2 vols., 1859).

BLACKWOOD, JOHN, a British publisher, born December 7, 1818, died October 9th. He was a son of William Blackwood, the founder of "Blackwood's Magazine." After the completion of his studies at the University of Edinburgh and several years of foreign travel, he established a branch office of the Edinburgh house in London. In 1845, upon the death of his brother Alexander, he returned to Edinburgh, and from 1846 up to his death continued to edit the magazine, in which he was eminently successful.

BREWER, JOHN SHERREN, an English historian, born in 1810, died February 16th. He graduated at Queen's College, Oxford, in 1833, and in 1841 was appointed Professor of English Literature in King's College, which position he held until 1876. He edited a large number of valuable works, among them "Fuller's Church History," an edition of the "Nicomachean Ethics," and the "Calendars of State Papers relating to the Reign of Henry VIII." Together with William Bullen, he edited the "Calendar of the Carew Manuscripts."

CHAM, the *nom de plume* of Amédée de Noé, a French caricaturist, born January 2, 1819, died September 6th. He supplied for many years the journals "Charivari" and "Journal Amusant" with illustrations, and was the most popular caricaturist of France. He contributed to these journals a large number of comic drawings, scenes, and reviews, which were afterwards published in the shape of albums.

CHENU, JEAN CHARLES, a French naturalist, born August 30, 1808, died November 16th. He studied medicine in Paris, entered the army

as assistant surgeon in 1829, took part in the Crimean war, and during the siege of Paris, 1870-'71, was director-general of ambulances. His principal works are "Illustrations Conchyliologiques" (1842-'47), and "Encyclopédie d'Histoire Naturelle" (31 vols., 1850-'61); and he wrote numerous treatises on medical history and natural history.

COX, EDWARD WILLIAM, a British lawyer, born in 1809, died November 24th. He was called to the bar at the Middle Temple in 1843, attained the rank of sergeant-at-law in 1868, was appointed the same year Recorder of Portsmouth, in 1870 Deputy Assistant Judge of Middlesex, and subsequently Deputy Lieutenant for the same county. He edited for some years the "Law Times," and was the author of several law-books, including "The Advocate," "A Treatise on the Law of Joint-Stock Companies," "A Treatise on the Law of Registrations and Elections," and "A Treatise on the Principles of Punishments." He also published "What am I? a Popular Introduction to Mental Philosophy and Physiology" (2 vols., 1874).

DELIGEORGIS, a Greek statesman, died May 25th. He was President of the Ministry from July to December, 1870, and again from 1872 to 1874, and at the time of his death was Minister of Finance. His second administration was particularly noted for the settlement of the Laurium question. (See GREECE, in "Annual Cyclopaedia" for 1872 and 1873.)

DIESTEL, LUDWIG VON, a German theologian, born September 28, 1825, died May 15th. He studied theology in the Universities of Königsberg, Berlin, and Bonn. In 1851 he went to the University of Bonn as lecturer on the Old Testament, was appointed in 1858 inspector of the newly established Evangelical Theological Seminary, and extraordinary professor, went in 1862 to Greifswald as ordinary professor, in 1867 to Jena, and in 1872 to Tübingen, where he remained till his death. His principal work is "Geschichte des Alten Testaments in der Christlichen Kirche" (1868).

DOVE, HEINRICH WILHELM, a German scientist, born October 6, 1803, died April 5th. He was educated at the Universities of Breslau and Berlin, where he devoted himself chiefly to mathematics and physics. In 1826 he was appointed a *privatdocent*, and in 1828 extraordinary professor in the University of Königsberg, in 1829 extraordinary and in 1845 ordinary professor in that of Berlin. In 1837 he was elected a member of the Academy of Sciences. He was among the first who reduced meteorology to the rank of a natural science, and his researches upon the laws of storms and hurricanes will always remain among the most valuable contributions to that department of knowledge. His reports and isothermal maps afforded the first representation of the isothermal lines of the whole globe. He was also the first to announce the presence of a secondary electric current in a metallic wire, and thus claims high rank among the founders of mod-

orn electrical science. Many of his discoveries and experiments he described in the publications of the Berlin Academy, Poggendorf's "Annalen," the "Zeitschrift für Erdkunde," the "Zeitschrift" of the Prussian Statistical Bureau, and many other periodicals. Among his principal works are: "Meteorologische Untersuchungen" (1857); "Ueber die nichtperiodischen Aenderungen der Temperaturvertheilung auf der Oberfläche der Erde" (6 parts, 1840-'59); "Ueber den Zusammenhang der Wärmeveränderungen der Atmosphäre mit der Entwicklung der Pflanzen" (1846); "Temperaturtafeln" (1848); "Monatsisothermen" (1850); "Das Gesetz der Stürme" (1857; 4th edit., 1874), which was translated into English and French; and "Klimatologische Beiträge" (2 parts, 1857-'69). His sons Richard Wilhelm and Alfred have both attained considerable prominence, the former in the departments of civil and ecclesiastical law, the latter as an historian.

DUBS, JAKOB, a Swiss statesman, born in the Canton of Zürich in 1822, died January 15th. He studied law in the Universities of Berne, Heidelberg, and Zürich. After having filled several offices in the cantonal courts, he was appointed in 1849 a judge of the new Federal Court, and shortly after President of the Court. His political career began in 1847, when he was elected to the Great Council of his canton. From 1855 to 1861 he was President of the cantonal government, Director of Education, and a member of the Church Council. In 1849 he was also elected a member of the National Council, of which body he was elected President in 1854. In 1861 he was elected into the Federal Council, and in 1864 was President of the Republic. He resigned his position in the Federal Council in 1872, but was elected to the National Council from the Canton of Vaud. In 1875 he was also appointed a judge of the reorganized Federal Court of Lausanne.

FANFANI, PIETRO, an Italian philologist, born April 21, 1815, died March 4th. He studied at first medicine, but afterward devoted himself entirely to philology and *belles-lettres*. He made extensive researches in ancient and mediæval literature, and in 1847 established at Florence the journal "Ricordi Filologici," which at once met with great success. He took part in the campaign against Austria in 1848, was taken prisoner, and confined in Theresienstadt. He returned to Tuscany in September, 1848, and was afterward employed in the Ministry of Public Instruction at Turin under Gioberti, and at Florence under Franchini. In 1859, after the annexation of Tuscany to Italy, he was appointed director of the Marucellian Library. Among his works are dictionaries of the Italian language, of the words peculiar to Tuscany, and of Tuscan pronunciation.

FICHTE, IMMANUEL HERMANN, a German philosopher, son of the celebrated Johann Gottlieb Fichte, born July 18, 1796, died August 8th.

He studied philosophy and philology in the University of Berlin, filled between 1822 and 1842 professorships at the gymnasia of Saarbrücken and Düsseldorf and the University of Bonn, and in 1842 was appointed professor in the University of Tübingen. In 1867 he was pensioned at his own request. His doctrine was that of an ideal theism. Among his principal works are: "System der Ethik" (2 vols., 1850-'53); "Die Seelenfortdauer und die Weltstellung des Menschen" (1867); "Die theistische Weltansicht und ihre Berechtigung" (1873); and "Fragen und Bedenken über die nächste Fortbildung deutscher Spekulation" (1876). In the latter years of his life Fichte expressed great interest in and sympathy with American spiritualism.

GARBETT, JAMES, an English scholar and clergyman, born in 1802, died March 25th. He was educated at Brasenose College, Oxford, where he graduated B. A., taking first-class honors, in 1822. He was elected Michel Fellow of Queen's College, and afterward fellow and tutor of Brasenose and Hulme Lecturer of Divinity; became public examiner of the university in 1829, filling that post for two years with great distinction; was appointed prebendary of Chichester in 1843, and archdeacon in 1851. He delivered the Bampton lectures before the University of Oxford in 1842, and was Professor of Poetry there from 1842 to 1852. Besides his "Bampton Lectures" (2 vols., 1842), he published a volume of "Prælectiones Academicæ," one of "Archidiaconal Charges," five volumes of sermons, and numerous pamphlets on the theological and academical questions of the day.

GISKRA, KARL, an Austrian statesman, born January 29, 1820, died June 1st. He studied law and political economy in the University of Vienna. In 1848 he was chosen a delegate to the German Parliament at Frankfurt, and achieved a national reputation for eloquence in debate. He became subsequently a lawyer at Vienna and at Brünn, and gained celebrity as counsel in criminal cases. He was soon elected to the Reichsrath; became Mayor of Brünn in 1866, as which he developed great executive ability; and in 1867 was elected President of the Chamber of Deputies. He was Minister of the Interior from 1867 to 1870 under Prince Carlos Auersperg, and afterward under Count Taaffe, and did excellent service in the reconstruction of the Austrian state. After his retirement from the Ministry he took a prominent part in the disreputable "Gründer" operations of that period, and in consequence lost much of his popularity.

GUIDI, FILIPPO MARIA, an Italian cardinal, born July 18, 1815, died February 28th. He entered the Dominican order, became Bishop of Frascati in 1872, was created cardinal priest March 16, 1863, Archbishop of Bologna December 21, 1863, and was shortly before his death raised to the rank of cardinal bishop.

HEER, I., a Swiss statesman, born in 1825,

died March 1st. He attended the Universities of Zürich, Heidelberg, Berlin, and Paris. In 1857 he was elected Landamman (Governor) of the Canton of Glarus, and a member of the National Council. For eighteen years he retained his position as Landamman, and was respected and honored by the entire people. Upon the creation of the North German Confederation, he was appointed Minister at the different German courts, but returned within seven months. In December, 1875, he was elected a member of the Federal Council, and in 1877 its President. Owing to sickness he was compelled to resign in December, 1878. He was one of the ablest as well as the purest statesmen of Switzerland, and his loss is mourned by all parties.

HOWITT, WILLIAM, a British author, born in 1795, died March 3d. He traveled extensively on the Continent and in Australia, and wrote, partly alone and partly with his wife, a large number of works on various subjects. Among his works are: "Book of the Seasons" (1831); "History of Priestcraft" (1833); "The Rural and Domestic Life of Germany" (1842); "Haunts and Homes of British Poets" (1847); "History of Scandinavian Literature" (1852); "Madame Darrington of the Dene" (1851); "Talangetta, or the Squatter's Home"; "The Man of the People" (1860); "Illustrated History of England" (8 vols., 1861); "History of the Supernatural in all Ages and Nations" (1863); "Discoveries in Australia" (1865); and "The Mad War Planet, and other Poems" (1871).

HUBER, JOHANNES, a German scholar, born August 18, 1830, died March 20th. He studied theology and afterward philosophy in the University of Munich, established himself as *privatdocent* there in 1854, became extraordinary Professor of Philosophy in 1859, and ordinary Professor in 1864. Among his earlier works are: "Idee der Unsterblichkeit" (1864; 2d edit., 1865); "Johannes Scotus Erigena" (1861); and "Die Philosophie der Kirchenväter" (1859), which was placed on the *Index Expurgatorius*. He was one of the most prominent champions of the Old Catholic movement in Bavaria, and wrote in its support many pamphlets, including "Das Papstthum und der Staat" (1871). He wrote an elaborate work on the history of the Jesuits (1873), and also works criticising Darwin, Strauss, Hartmann, and Haeckel.

JOHNSTON, ALEXANDER KEITH, a British explorer and geographer, born November 24, 1841, died June 28th. He pursued his studies under his father, the celebrated geographer of the same name, and afterward in Leipsic under A. Petermann. In 1874 he went to Paraguay upon an exploring expedition, of which he gave an account to the Royal Geographical Society. Besides frequent contributions to the "Geographical Magazine," he wrote the article on Africa for the new edition of the "Encyclopædia Britannica," and edited, with consid-

erable additions, the volume devoted to Africa in Stanford's "Compendium of Geography and Travel." In November, 1878, he was sent out in charge of the English expedition to explore the head of Lake Nyassa. He was attacked by dysentery, and died after a short illness.

LANDSEER, CHARLES, a British painter, born August 12, 1799, died July 22d. He was the second of the three sons of Mr. Landseer, an engraver of very considerable ability, his younger brother being the famous Sir Edwin Landseer. He was instructed in art by his father and by E. R. Haydon, entered the school of the Royal Academy in 1816, and accompanied Lord Stuart de Rothesay on his mission to Portugal and Brazil about 1820, collecting the materials utilized in many subsequent pictures. He was elected an associate of the Royal Academy in 1837, and Academician in 1845, and was keeper of the Academy from 1851 to May, 1873, when the Council voted him a pension equivalent to his former salary. Among his best paintings are "Pillaging of a Jew's House," "The Temptation of Andrew Marvell," "The Departure of Charles II. from Bentley," and "The Eve of the Battle of Edgehill."

LUBBOCK, Lady ELLEN FRANCES, wife of Sir John Lubbock, born in 1835, died October 20th. She shared the scientific tastes and tasks of her husband, and contributed numerous articles to scientific and literary journals, especially the "Academy" and "Nature." In 1862-'63 she published "Vacation Tourists," containing a description of her researches among the shell-mounds of Denmark.

MARTIN, KONRAD, a German bishop, born May 18, 1812, died July 16th. He was educated at the Universities of Halle, Munich, and Würzburg, was ordained as priest in 1836, and in 1856 became Bishop of Paderborn. He attended the Vatican Council, and after his return to Germany gained considerable celebrity as one of the most bitter opponents of the May laws, which he denounced as the "most atrocious ever launched against the Church of Christ since the era of Diocletian." He was arrested, tried, and deposed from his office in 1875, and shortly after escaped to Holland, whence he was expelled. After that he lived in retirement in Belgium. He was the author of a series of works on the Œcumenical Council, among them "Das unfehlbare Lehramt des Papstes" (1870), "Die Arbeiten des Vaticanischen Concils" (1873), and "Omnium Concilii Vaticanici quæ ad Doctrinam et Disciplinam pertinent Documentorum Collectio" (1873). He also published a number of text-books on religion, including "Lehrbuch der Katholischen Religion" (1844; 15th edit., 1873), which was translated into many foreign languages, and "Lehrbuch der Katholischen Moral" (1850; 5th edit., 1865).

MERS, JOHN, a British botanist, born August 25, 1789, died October 17th. Early in the present century he went to South America, where he remained many years, traveling and explor-

ing. He published "Travels in Chili and La Plata," "Illustrations of South American Plants," and "Contributions to Botany." He was a member of the Linnæan and Royal Societies.

MURAT, Princess CAROLINE GEORGINE, born April 13, 1810, died February 10th. She was the daughter of Thomas Frazer of Bordentown, New Jersey, and in 1827 married Prince Lucien, the second son of King Joachim Murat. The family for a time was in very straitened circumstances, their only support being a school for girls kept by Mrs. Murat. The establishment of the Second Empire restored to them wealth and titles. Her husband died May 10, 1878.

OGILVIE, ROBERT ANNESLEY, a British statesman, born in 1807, died May 16th. He was educated at Eton, and entered the customs service in 1828. On account of his extensive knowledge of British and continental commerce, he was appointed to take part in the different commercial conferences between Great Britain and the continental powers held since 1860, and for many years he was consulted by the different Chanceroirs of the Exchequer on the alteration and arrangement of the customs tariffs. In 1863 he was appointed Surveyor-General of Customs, and retired from the service in 1876 on account of ill health.

OMER PASHA, a Turkish general, died February 19th. He was a native of Mitau in Courland, emigrated to Hungary in his youth, took part in the revolutionary movements of 1848-'49, and was compelled to seek refuge in Turkey, where he entered the army and served with distinction in various parts of the empire. In June, 1877, he was made general of division and appointed to a command in Armenia. At the battle of the Aladja Dagh he was taken prisoner, and was sent to Kiev, whence he returned in 1878. Immediately upon his return he was placed under trial by court martial, but the proceedings were spun out to suppress some damaging information. He was seized with an apoplectic fit while in attendance upon the court, and died within a few hours.

PALLADIUS, Archimandrite, the head of the Russian ecclesiastical mission in China, died in February at an advanced age. During his long residence in Peking he was an assiduous student of Chinese literature, and gained a thorough knowledge of the history, philosophy, and religions of China. Though he never published any independent work, he was a large contributor to the Russian periodical published by his mission establishment at Peking (4 vols., 1852-'66), in which appeared from his pen "A Life of Buddha" (vol. i.), "Historical Studies in Ancient Buddhism" (vol. ii.), "The Navigation between Tientsin and Peking" (vol. iii.), "An Ancient Mongol Account of the Life of Genghis Khan," and "The Mohammedans in China" (vol. iv.). He was also a contributor to the "Reconeil Oriental" and the "Proceedings" of the Geographical Societies of Siberia and St.

Petersburg. At the time of his death he had completed and was about to publish a Chinese-Russian dictionary.

ROTHSCHILD, BARON LIONEL DE, a British financier, the first representative of the Jewish race in the English Parliament, born November 22, 1808, died June 3d. He was the oldest son of Nathan Meyer de Rothschild, who in 1822 was created a baron of the Austrian Empire. Baron Lionel de Rothschild, whose great monetary transactions indicate the financial history of the last fifty years, was in political life chiefly known for the part he took in the emancipation of the Jews, and for his consistent advocacy of Liberal principles. He was elected a member of Parliament for the City of London in the Liberal interest in 1847, 1849, 1852, and 1857, but was not permitted to take his seat until 1858, when the Jews' Disabilities Bill was passed. He kept his seat until 1874. He was munificent in his charities, benefiting not only people of his own faith but of all classes. He was married in 1836 to Charlotte, daughter of Baron Charles de Rothschild, and had three sons and two daughters. His oldest son, Sir Nathan Meyer de Rothschild, Bart., M. P. for Aylesbury, was born in 1840, and succeeded to the baronetcy of his uncle Sir Anthony Rothschild in 1876.

STÄMPFLI, JACOB, a Swiss statesman, died May 14th. He was one of the leaders of the Radical party, and was President of the Republic in 1861. He was one of the members of the Geneva Court of Arbitration on the Alabama claims.

WALDEGRAVE, Countess FRANCES ELIZABETH ANNE, an English lady, born in 1821, died July 5th. She was the daughter of John Braham, the famous opera-singer, and was married four times: to John James Waldegrave; then to his relative George Edward, seventh Earl of Waldegrave; thirdly, to George Granville Harcourt; and, fourthly, to Chichester Parkinson Fortescue, created Lord Carlingford in 1874. For a number of years she was one of the most prominent and popular leaders of London society, and her receptions brought together the chief members of the Liberal party, to which she was strongly attached.

WARD, EDWARD MATTHEW, a British painter, born in 1816, died January 15th. He became a student at the Academy in 1834, and was assisted in his studies by Wilkie. In 1836 he went to Rome, remaining nearly three years; and before returning to England he spent a few months in Munich, studying fresco-painting under Cornelius. His picture of "Dr. Johnson reading the Manuscript of the Vicar of Wakefield" (1843) was favorably received, and may be considered as the first of a long series of popular works in which Mr. Ward made for himself a kind of speciality that has been described as "historical genre." In these works, generally minor historical, biographical, and literary episodes or anecdotes are treated, not after the manner of the old historical style of

high art, but from more familiar or domestic points of view, with careful attention to costume and all picturesque surroundings and accessories. The most attractive specimens of the paintings of his maturer years are: "Queen Victoria visiting the Tomb of Napoleon in the Hospital of les Invalides in Paris," "Louis Napoleon receiving the Order of the Garter from her Majesty at Windsor," "Jeannie Deans," "The Duke of Argyll," "Dr. Johnson and John Wilkes," "Queen Anne Boleyn at the Tower Stairs," "The Earl of Leicester and Amy Robsart," and "Caught on both Sides."

ZSEDENYI, EDUARD VON, a Hungarian statesman, born March 18, 1803, died February 20th. He played for many years an important part in the political history of his country, having been first elected a deputy in 1833. From 1865 he was one of the most prominent members of the Deak and afterward of the Liberal party. He was one of the ablest financiers of his country, a privy councilor, and from 1875 General Director of the Evangelical Church of Hungary.

OHIO. The debt of the State on November 15, 1879, was as follows:

Foreign debt, payable in New York:	
Loan payable July 1, 1868, not bearing interest.....	\$2,500 00
Loan payable June 30, 1851, six per cent. interest.....	4,072,640 80
Loan payable December 31, 1856, six per cent. interest.....	2,400,000 00
Total foreign debt.....	\$6,475,140 80
Domestic debt, payable at Columbus:	
Canal loan, not bearing interest.....	1,665 00
Total funded debt.....	\$6,476,805 80
Local indebtedness of the State on September 1, 1879:	
Net debt of counties.....	\$2,572,334 49
Net debt of townships, including debts created by boards of education other than for separate school districts.....	161,321 10
Net debt of cities (first and second class)....	36,086,069 77
Net debt of incorporated villages.....	969,151 85
Net debt of school districts (special or separate).....	1,451,197 32
Total local debts.....	\$41,490,574 53
Amount of the reimbursable debt:	
State.....	\$6,476,805 80
Local.....	41,490,574 53
Total debt redeemable.....	\$47,967,379 83
Irredeemable debt, composed of school and other trust funds, upon which the State pays interest at six per cent. per annum.....	4,289,719 52
Aggregate public debts in the State..	\$52,257,098 35
The revenue and expenditures for the year were as follows:	
Balance in the State Treasury November 15, 1878, belonging to various funds.....	\$918,694 97
Receipts from all sources.....	5,730,170 10
Total amount of funds in the Treasury..	\$6,648,865 07
Disbursements during the year.....	5,658,752 33
Cash balance in the Treasury November 15, 1879.....	\$995,112 74
Total estimated receipts for 1880, including balance on hand.....	\$5,868,699 28
Total estimated disbursements for 1880.....	4,936,902 03
Estimated balance in the Treasury November 15, 1880.....	\$951,797 25

The taxes levied in 1878, collectible in 1879, were:

State taxes.....	\$4,496,876 01
County and local taxes.....	21,528,069 29
Delinquencies and forfeitures.....	2,285,320 56
Total for 1879.....	\$28,550,765 86

The taxes levied in 1879, collectible in 1880, are as follows:

State taxes.....	\$4,450,841 66
County and other local taxes.....	21,306,323 05
Delinquencies and forfeitures.....	2,304,566 55
Total for 1880.....	\$28,061,262 16

The value of all the taxable real estate and personal property in Ohio, according to the consolidated tax duplicate for 1879, is as follows:

Real estate in cities, towns, and villages....	\$877,657,467 00
Real estate not in cities, towns, and villages	716,111,487 00
Chattel property.....	442,979,885 00

Total taxable values for 1879..... \$1,536,748,789 00

On personal property there was a decrease in valuation, as compared with 1878, of \$18,480,667; on real estate in cities and towns of \$4,235,500; total decrease, \$22,716,167. There was an increase on lands not in cities and towns of \$6,887,452, making the total net decrease \$15,828,715.

At the close of the fiscal year 1878 (November 15th) there was a balance in the Treasury to the credit of the public works of \$26,641.66; gross earnings from tolls, fines, and water rents for the current year ending November 15, 1879, \$213,350.22, a total of \$239,991.88. Received at State Treasury since November 15th, of collections during current year, \$5,790.79. Total, \$245,782.67. Total expenditures for the year, \$187,116.32. Balance to credit of canal fund, \$58,666.35; add amount in hands of receivers, \$23,466.66, making the real balance to public works, \$82,133.01, since their abandonment by the late lessees, over and above all expenses chargeable to them.

The statistics of the principal agricultural products of the State, as reported by township assessors in May, 1879, are as follows: Wheat, 2,123,958 acres, 35,218,773 bushels; corn, 3,037,380 acres, 114,839,127 bushels; oats, 935,315 acres, 29,671,231 bushels; potatoe, 116,513 acres, 7,580,118 bushels; rye, 58,041 acres, 756,502 bushels; barley, 38,461 acres, 1,265,299 bushels; timothy, 1,586,778 acres, 1,951,488 tons; clover, 388,219 acres, 338,985 tons; tobacco, 28,075,140 pounds; butter, 50,332,023 pounds; cheese, 36,401,386 pounds; wool, 16,390,505 pounds; flax, 48,986 acres, 474,669 bushels seed, 12,036,083 pounds fiber; sorghum, 16,305 acres, 11,909 pounds sugar, 1,273,048 gallons sirup; maple sugar, 2,987,288 pounds; maple sirup, 510,117 gallons; bees, 169,755 hives; honey, 2,521,293 pounds; apples, 30,669,404 bushels; peaches, 1,476,159 bushels; pears, 110,419 bushels.

The number and valuation of animals in the State, as returned by the assessors for the year 1879, were as follows:

ANIMALS.	Number.	Value.
Horses	780,642	\$34,705,410
Cattle	1,630,004	24,765,607
Mules	26,798	1,851,001
Sheep	4,267,261	9,811,972
Hogs	2,041,649	4,849,445
Dogs	272,084	878,624

The General Assembly, at its adjourned session, adopted a codification of the statutes, passed a very stringent law to prevent bribery or intimidation at elections, and submitted to the vote of the people proposed amendments to the Constitution as follows:

ARTICLE II.

SECTION 2. Senators and Representatives shall be elected biennially by the electors in the respective counties or districts, at a time prescribed by law; their terms of office shall commence on the Tuesday next after the first Monday of January thereafter, and continue two years.

ARTICLE III.

SECTION 1. The Executive Department shall consist of a Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, and Attorney-General, who shall be chosen by the electors of the State, at the place of voting for members of the General Assembly, and at a time prescribed by law.

ARTICLE X.

SECTION 4. Township officers shall be elected on the first Monday of April, annually, by the qualified electors of their respective townships, and shall hold their offices for one year from the Monday next succeeding their election, and until their successors are qualified; except township trustees, who shall be elected by the qualified electors in the several townships of the State on the first Monday of April, A. D. 1880, one to serve for the term of one year, one for two years, and one for three years; and on the first Monday of April in each year thereafter, one trustee shall be elected to hold the office for three years from the Monday next succeeding his election, and until his successor is qualified.

JUDICIAL ARTICLE.

SECTION 3. The State shall be divided into nine common pleas districts, of which the county of Hamilton shall constitute one, which districts shall be of compact territory, bounded by county lines, and said districts, other than said county of Hamilton, shall, without division of counties, be further divided into subdivisions, in each of which, and in said county of Hamilton, there shall be elected by the electors thereof, respectively, at least one judge of the court of common pleas for the district, and residing therein. Courts of common pleas shall be held by one or more of these judges in every county of the district, as often as may be provided by law, and more than one court or sitting thereof may be held at the same time in each district.

SEC. 5. In each district there shall be elected, by the electors at large of such district, one judge of the district court, by whom the district courts in such district shall be held, and he shall receive such compensation as may be provided by law. District courts shall be held in each county at least once every year. The General Assembly may increase the number of district court judges to three in any district or districts, and may provide for having a judge *pro tempore*, to hold any court whenever necessary by reason of the failure, disqualification, absence, or sickness of any judge; and the amount of pay allowed a judge *pro tempore* may be deducted from the salary of any judge whose default causes the necessity of having the *pro tempore* judge. The times of holding com-

mon pleas and district courts shall be fixed by law, but the General Assembly may authorize the judges of said courts, respectively, to fix the times of the holding of said courts.

All the proposed amendments were overwhelmingly rejected at the October election.

The Republican State Convention was held at Cincinnati, May 28th. The following ticket was nominated: For Governor, Charles Foster; for Lieutenant-Governor, Andrew H. Hickenlooper; for Auditor of State, John H. Oglevee; for Treasurer of State, Joseph Turney; for Judge of Supreme Court, W. W. Johnson; for Attorney-General, George K. Nash; for member of Board of Public Works, James Fullington. The platform adopted was as follows:

Resolved, That the Republican party of Ohio, reaffirming the cardinal doctrines of its adopted faith as heretofore proclaimed, especially pledges itself anew to the maintenance of free suffrage, equal rights, the unity of the nation, and the supremacy of the national Government in all matters placed by the Constitution under its control.

Resolved, That we earnestly appeal to the people in the exercise of their power through the ballot-box to arrest the mad career of the party now controlling both branches of Congress, under the domination of a majority of men lately in arms against the Government, and now plotting to regain through the power of legislation the cause which they lost in the field, namely, the establishment of State sovereignty by the overthrow of national supremacy.

Resolved, That the Democratic party, having committed itself to an attempt to break up the Government by refusing to appropriate to their legitimate objects the public moneys already collected from the people unless the Executive shall give his official signature to measures which he conscientiously disapproves—measures plainly intended to allow a free course to fraud, violence, and corruption in the national elections, and to impair the constitutional supremacy of the nation—deserves the condemnation of every honest and law-abiding citizen.

Resolved, That the present extra session of Congress, thus compelled by Democratic conspirators, has been prolonged beyond all possible excuse, not only to the depletion of the Treasury, but also to the grave detriment of every industrial and commercial interest of the country, by uncalled-for agitation of the several questions, by persistent efforts in hostility to the resumption of specie payments already happily accomplished, by constantly tampering with a currency system unsurpassed in the world, by reopening and stimulating sectional controversy, especially through the avowed determination to repeal all war legislation, and by seeking to inaugurate a reactionary revolution designed to restore full power to a solid South in the affairs of the Government.

Resolved, That the financial administration of the Government by the Republican party, in accomplishing the great work of the resumption of specie payments, in restoring our currency to par value, in greatly reducing the burden of the national debt, in refunding a large proportion of the same at a rate of interest one third less than the former rate, thereby alone saving to the Treasury \$18,000,000 a year, and in enhancing the national credit to a standing never before attained, is a source of just pride to the Republicans of Ohio, and deserves the warm approbation of the American people.

Resolved, That this perpetual disturbance of the country in response to the conciliatory course of the Administration should by the judgment of the people be thoroughly condemned.

Resolved, That the Democratic Legislature of Ohio, going on from bad to worse, from O'Connor reforms of our public institutions resulting in scandals un-

numbered and mischiefs unmeasured, to outrageous attempts to reverse the will of the people as declared by their suffrages, and foisting upon them legislative usurpation, defeated candidates for local offices in place of those duly elected by the lawful and unquestioned ballots cast in the interest of honest and decent home government, merits the most indignant rebuke of every intelligent voter of the State.

Resolved, That the memories of our dead heroes who gave their lives to save the nation from destruction protest against the expulsion of their living comrades from public offices to gratify the partisan purposes of the dominant party in Congress.

Resolved, That we send greeting to the President of the United States and our Republican members of Congress, and we cordially thank and honor them for the firm and patriotic stand they have taken in opposition to the designs of the majority of the present Congress, and we hereby pledge them our earnest and undivided support.

The Democratic State Convention met at Columbus, June 4th, and nominated the following ticket: For Governor, Thomas Ewing; for Lieutenant-Governor, A. V. Rice; for Treasurer, Anthony Howells; for Auditor, Charles Reemelin; for Judge of Supreme Court, W. J. Gilmore; for Attorney-General, Isaiah Pillars; for member of Board of Public Works, Patrick O'Marah. The following platform was adopted:

Resolved, That the Democracy of Ohio demand free and fair elections, and to that end denounce all interference with elections by the military power; that the experience of this and other countries has abundantly proved that the presence of troops at the polls is destructive of the freedom of the elections, and is incompatible with the existence of free institutions; that the laws enacted by Congress which, under the pretense of regulating the manner of Congressional elections, interfere with the election of State officers and overthrow the laws of the State governing the choice of such officers, are unconstitutional, and for that reason ought to be repealed; that they are instrumentalities of fraud, force, and corruption, by which the party in power uses the money of the people to corrupt, and thousands of irresponsible officers to harass and coerce the voters, and especially by force and fraud to deprive our naturalized citizens of the right to vote; and for these reasons also, said laws ought to be immediately repealed.

Resolved, That impartial juries are essential to the administration of justice, and thereby to the preservation of liberty; that no man can be secure in his person or property when the juries are "packed" and controlled by the Government for despotic and partisan purposes; that under the Federal jury laws, now in existence, juries have been so "packed" and controlled, and that the highest interests of justice and free government require that these laws be changed so as to secure fair, impartial, and independent juries in the Federal courts.

Resolved, That the Republican minority in Congress, by refusing to vote supplies to maintain the Government unless the majority would agree to the use of troops at the polls, and also to the maintenance of the unconstitutional, corrupting, violent, and unjust election laws aforesaid; and the President of the United States, by his unprecedented use of the veto power, in order to perpetuate said laws and the use of armed men at the polls, have shown a spirit of faction and a devotion to party success instead of the welfare of the country and the preservation of its Constitution and liberties, that demand the condemnation of the whole American people.

Resolved, That President Hayes, by his frequent interposition of the veto in order to defeat legislation that was plainly constitutional, that in no way interfered with the independence of any other department of the Government, and had received the most mature con-

sideration of Congress, has shown an utter disregard of the considerations and principles that induced the insertion of the veto power in the Constitution, and a like disregard of the wishes and welfare of the people.

Resolved, That we declare it as the sense of the Democracy of Ohio that not a dollar should be appropriated by Congress to pay soldiers, marshals, deputy marshals, or supervisors of election, to interfere with or control the elections.

Resolved, That the efforts of the Republican party to open and keep alive the war feeling between the North and South are to be condemned by every lover of his country.

Resolved, That we reaffirm the financial principles heretofore advocated by the Democratic party of Ohio, that the issue of money in any form, and the regulation thereof, belong to the General Government alone, and ought not to be delegated or intrusted to individuals or corporations; that we therefore oppose the perpetuation of the present national banking system, as a means of control over the currency of the country, and demand the gradual substitution of Treasury notes for national-bank currency, to be made receivable for all dues and a legal tender equally with coin, such Government issues to be regulated upon principles established by legislation or organic law, so as to secure the greatest possible stability of value.

Resolved, That after changing the valuation of all property from the scale of paper money, by which the heavy burdens of debt now resting upon the people were created, to the former level of gold and silver, the change then made in the metallic standard itself, by the demonetization of silver, was a monstrous fraud upon the people, cunningly devised in the interests of the holders of bonds, that should be condemned as in violation of every principle of honest dealing, and a covert assault upon the fundamental rights of property; and we therefore demand the full restoration of silver to its original place as a money metal, the same as gold.

Resolved, That the rapid increase of the interest-bearing debt of the Government under the present Administration ought to excite the serious apprehension of the people. We demand that the further increase of the bonded debt in time of peace be stopped, and it be put in process of extinction.

Resolved, That the attack made upon the State Legislature in the Republican platform is wholly undeserved, and that the Legislature, in its arduous work of codifying the laws of the State, in the reduction of fees and salaries of county officers, and the passage of a law to protect the ballot-box and prevent bribery at elections, deserves the commendation of the people of the State.

Resolved, That it is the duty of our Government to maintain to its fullest extent the doctrine that a man may, in good faith, change his habitation and become a citizen of any other country. We should protect in every part of the world all our naturalized citizens as we would our native-born, and should resist all improper claims upon them by the governments to which they no longer owe allegiance. We demand that existing treaties with all foreign governments be rigidly enforced, and that early steps be taken to obtain from the German Empire a fuller recognition of the right of expatriation, and of the right of our naturalized citizens returning or having property there, by a modification of the treaty existing between us.

The minority of the Committee on Resolutions submitted the following additional resolution:

Resolved, That we request the Democratic members of Congress not to vote any appropriation to any army until a provision shall have been made that such army shall not be employed to influence or intimidate people at the polls.

This resolution was defeated by a heavy vote.

The National (Greenback-Labor) State Convention was held at Columbus June 4th, while the Democratic State Convention was in ses-

sion. The proceedings were inharmonious, but the following ticket was finally nominated: For Governor, General A. Saunders Piatt; for Lieutenant-Governor, Hugo Preyer; for Auditor, Andrew Roy; for Treasurer, Charles Jenkins; for Supreme Judge, A. M. Jackson; for Attorney-General, James R. Groghan; for member of Board of Public Works, George A. Platt. The following platform was adopted:

The National-Greenback-Labor party of Ohio, in convention assembled, adopt the following declaration of principles as our platform, and go before the people thereon with the consciousness of thereby performing a sacred duty to our fellow American citizens, as sovereigns of a free republic:

In the recognition and distribution of civil and political rights and privileges there should be no favoritism on account of birth, color, creed, or financial condition.

The General Government should issue an ample volume of full legal-tender currency to meet the needs of the country and to promptly pay all of its debts.

We recognize the deplorable commercial and industrial condition of our country as something appalling to contemplate, and we unhesitatingly hold the old parties responsible for the nefarious and ruinous policy pursued, and point to their record as full and complete evidence to the people that it is folly to hope for relief from either; and we unhesitatingly charge this suffering and degradation as the result of the legislation of the last quarter of a century, being solely in the interest of the moneyed aristocracy and corrupt corporations.

The funding of the national debt into long-time bonds, to be paid over and over in the form of interest, absorbing the wealth of the nation, making business prosperity an impossibility, reducing the laborer to a condition of semi-slavery, and rendering the welfare of the nation subservient to the interests of the bondholding class, is an outrage so monstrous that any political party that sanctions it is unworthy the support of intelligent and honest men. We are inflexibly opposed to the issue by the Government of interest-bearing bonds of any description for any purpose whatever.

The national banking system should be immediately abolished.

A tariff amply sufficient for the protection of American industries should be maintained till a free financial system may have shown it to be unnecessary to tax labor for the support of capital.

All internal revenue taxes should be dispensed with, and a graduated income tax substituted.

We demand the immediate calling in and payment of all United States bonds in full legal-tender money.

We demand an equalization of bounties for soldiers.

We denounce all references to our late civil war of a malicious and insulting nature as revolutionary and wholly inconsistent with the principles of free government, and antagonistic to the restoration of the old motto: "United we stand, divided we fall."

A platform reported by the minority of the Committee on Resolutions called out bitter discussion, and when it was voted down a number of delegates left the Convention. They issued a circular repudiating its action, and calling a meeting for conference in Toledo on the 24th of June. At that meeting the action of the Columbus Convention was repudiated, and a number of resolutions were adopted, but no attempt to nominate a State ticket was made.

The Prohibitionists had a full ticket in the field.

The election was held October 14th, and re-

sulted in the election of all the Republican candidates, the vote being as follows:

FOR GOVERNOR.

Charles Foster, Republican.....	386,261
Thomas Ewing, Democrat.....	319,132
A. S. Piatt, Greenback.....	9,129
G. T. Stewart, Prohibition.....	4,145

FOR LIEUTENANT-GOVERNOR.

Andrew H. Hiekenlooper, Republican.....	385,140
A. V. Rice, Democrat.....	319,462
Hugo Preyer, Greenback.....	9,266
J. W. Sharp, Prohibition.....	4,324

FOR AUDITOR.

J. H. Oglevee, Republican.....	335,134
C. Reemelin, Democrat.....	317,442
Andrew Roy, Greenback.....	11,621
M. J. Fanning, Prohibition.....	4,337

FOR TREASURER.

Joseph Turney, Republican.....	335,670
A. Howells, Democrat.....	317,134
C. Jenkins, Greenback.....	11,222
Elias Blair, Prohibition.....	4,343

FOR JUDGE OF SUPREME COURT.

W. W. Johnson, Republican.....	336,009
W. J. Gilmore, Democrat.....	316,994
A. M. Jackson, Greenback.....	11,331
J. Harding, Prohibition.....	4,332

FOR ATTORNEY-GENERAL.

G. K. Nash, Republican.....	336,100
Isaiah Pillars, Democrat.....	316,773
J. R. Groghan, Greenback.....	11,165
S. B. Foster, Prohibition.....	4,319

FOR BOARD OF PUBLIC WORKS.

J. Fullington, Republican.....	336,501
P. O'Marah, Democrat.....	315,963
George A. Platt, Greenback.....	11,103
J. H. Horton, Prohibition.....	4,330

OLD CATHOLICS. Both in Germany and Switzerland the Old Catholic movement appears to have lost ground during the year 1879, while in Austria some progress was made in the organization of the Church by the convocation of the first Synod.

In Germany, the Synod was held as in former years at Bonn, where the Bishop of the Church, Dr. Reinkens, resides. It was less attended than any of the five previous Synods, only 16 priests and 42 laymen being present. The usual statistical report on the condition of the Church was not presented this year. The Bishop in his opening address admitted that there had been during the past year no increase of number, but stated that there had not been either a retrogression. He was still very hopeful respecting the future prospects of the Church. It was resolved to establish a pension fund for invalidated priests. Next year no Synod will be held, but a Church Congress, either at Heidelberg or Mannheim. The Synodal Council, which remains in power until the meeting of the next Synod, will consist of the Bishop, Professor Schulte (Vice-President), Professors Knoodl, Weber, and Michelis, one parish priest, and four other laymen. The Church suffers considerably from want of funds, and the Bishop stated that several offers from excellent priests had therefore to be declined. Two students were studying theology in the theological faculty of Bonn. The three

Old Catholic professors of this faculty, who last year withdrew from the Synod because they disapproved the abolition of priestly celibacy, had continued to keep aloof from active coöperation in the work of the Church. For the same reason, most of the priests and congregations of Bavaria have suspended their relations with the Bishop and the Synod. Dr. Döllinger, who has never sympathized with the organization of an independent Church, contents himself with protesting against the Vatican Council, and takes no active part in the building up of an Old Catholic Church. He resisted, however, the efforts made by an Austrian prelate, at the special request of the Pope, and by Archbishop Steichele of Munich, his former pupil, to induce him to rejoin the communion of Rome. The Old Catholic Church lost in 1879 some of its most distinguished members, as Professor Huber (see OBITUARIES, FOREIGN) and Classen Kappelmann.

The Synod of the "Christian Catholics" of Switzerland held its fifth annual session on June 5th at Solothurn, the capital of the canton of the same name. The Church has begun and will continue to suffer great losses in property and power in the Canton of Berne, in consequence of the determination of the Roman Catholics (those who adhere to the resolutions of the Vatican Council) to accept the church law of the canton, which provides for an election of all priests by popular suffrage, and subjects them to a reëlection every six years. At the first election which took place in the Catholic parishes, the Roman Catholics refused to take part, and thus nearly all the parishes passed into the hands of the Old Catholics. The latter, though in power, constitute only a minority in most of the parishes, and must be prepared to lose most of them whenever the Roman Catholics conclude to exercise their right of voting. In this way some parishes have already been lost, and others will follow. Bishop Herzog reported this year the number of parishes as 56 (against 61 in 1878), and the number of priests as 72 (against 75 in 1878). The number of students of theology in the Old Catholic theological faculty of Berne was 11. Communion in both kinds, which by the Synod of 1878 was declared permissible, has since been introduced in the cantons of Geneva and Neuchâtel; the parishes of the other cantons have thus far retained communion in one kind. A lively discussion took place this year on the subject of a revised French missal. It has been approved by M. Michaud, the most prominent man of the Church in French Switzerland, who strongly leans toward a union with the Greek Church; but Bishop Herzog condemned the attempt, and only conceded that the manual was not un-Catholic, and recommended the Synod to refer it back to the Genevese for better consideration. The Synod desired to enter into a closer union with the Anglican Churches of England and Amer-

ica, and passed a series of resolutions to that effect. The President of the Synodal Council, Landammann Keller of Aargau, resigned his post on account of old age. He was succeeded by Herr Philippi of Basle.

The Old Catholics of Austria had at the beginning of 1879 three congregations, organized according to law and therefore recognized by the state, at Vienna, Ried, and Warnsdorf. Being as yet without a bishop, they were doubtful whether they had the right to call a Synod; but their legal adviser, Professor Schulte of Bonn, accorded to them the right of constituting themselves "an extraordinary Synod." This Synod met at Vienna on July 5th, simultaneously with the Synods of Germany and Switzerland. A provisional Synodal Council was constituted, with Dr. Linder, a member of the Vienna Town Council, as President, and the three priests of the Church and three other laymen as members. Subject to ratification by a future Synod, the Synodal Council adopted for Austria the reforms thus far introduced by the German and Swiss Synods. These reforms are classified under eight heads: 1. The participation of the laity in the outer government of the Church, popular election of the clergy, etc.; 2. Confession to be voluntary, not compulsory; 3. Freedom of the clergy to marry; 4. Use of the national tongue in the liturgy and all ecclesiastical offices; 5. Fasting and abstinence to be no longer a matter of obligation; 6. Reduction of superfluous festivals; 7. Reforms in the matter of indulgences, the veneration of pictures and relics, religious processions, etc.; 8. Abolition of mass-stipends and all payments for spiritual functions. The Synodal Council was instructed to take the necessary steps to obtain from the Reichsrath an appropriation for the support of the Old Catholic Church, and further to make the necessary preparation for the future election of a bishop.

In France, the first Old Catholic congregation has at last been organized in Paris by Father Hyacinthe (M. Loyson). As long as the French Church has no bishops of her own, it has been arranged between M. Loyson on the one hand, and the Anglican bishops of England, Scotland, and Ireland, who take a special interest in the Old Catholic movement in France, on the other, that the Primus of Scotland shall exercise episcopal jurisdiction. As delegate of the Primus, Bishop Herzog of Switzerland in July administered the sacrament of confirmation to seven persons. Over six hundred names were inscribed in Paris as adherents to the programme of Catholic reform issued by M. Loyson in February, 1879. He was assisted in Paris by two priests.

OREGON. The progress of Oregon by the gradual increase of population and the patient development of its material resources, during the last ten years, presents some remarkable results. The population of the State in 1868 was 80,161; and that of some of the towns

was: Portland, 6,717; Salem, 1,200; Albany, 856; Astoria, 556. In eastern Oregon there were then scarcely 10,000 persons. Two years later, on January 1, 1870, the State's population was 90,983, while the number of inhabitants in Portland, owing to the building of the east and west side railroads, had increased to 11,103 on January 1, 1872. From that time to the end of 1874 very little increase was made in the population of Portland or of the State. Portland had on January 1, 1874, 12,459 inhabitants, while the State's population aggregated 95,673 persons that year. From 1875 to 1878 both the population of the State, Portland, and Astoria had increased wonderfully. Oregon was then estimated to contain 160,000 persons, Portland very nearly 20,000, and Astoria 1,800. But the most rapid stride in population was in eastern Oregon. In 1874 the entire number of white persons therein amounted to only 12,000, and official statistics show that there are now in eastern Oregon and eastern Washington Territory close upon 50,000 persons.

The tables of grain exports, prepared from the statistics of the Portland Board of Trade by its Secretary, William Reid, show that during the year ending January 1, 1868, Oregon exported 120,980 barrels of flour, and only 45,810 centals of wheat, none of which was sent to foreign countries. This was considered a remarkable increase over the year ending January 1, 1867, when only 29,811 barrels of flour were exported. In 1869 the total values of wheat and flour exports amounted to \$589,872. In 1870 Oregon began to do a direct foreign trade with Europe, and dispatched from the Columbia River 12 vessels with 189,892 centals of wheat, of the value of \$379,618. The united exports of wheat and flour to all countries in that year amounted to \$1,050,522. In the succeeding year, 1871-'72, there were dispatched to Europe 12 ships of larger tonnage, with 242,759 centals of wheat, of the value of \$531,689. So successful had these ventures become that in the next year the foreign exports of wheat were more than doubled, as in 1872-'73 there were dispatched to Europe 24 vessels with 509,430 centals of wheat. The next year, 1873-'74, Oregon tried the export of flour to Europe, and shipped 97,600 barrels and 999,382 centals of wheat to the United Kingdom in 54 vessels, receiving in return therefor \$2,435,794. The total receipts from wheat and flour exports in that year amounted to \$4,037,008—an increase in two years unparalleled in the history of any other State. In 1874-'75 there were dispatched to Europe, China, and Australia 73 vessels, with 1,299,318 centals of wheat and 116,000 barrels of flour, in addition to 826,322 centals of wheat exported to California and other countries—the total exports, reckoning flour to wheat, that year, 1875-'76, being 2,563,539 centals. The year ending August 1, 1877, did not show any increase of exports in quantity over the preceding year, but the values were

considerably higher. In the last harvest year, ending August 1, 1878, there were exported to all countries, including San Francisco, British Columbia, and Puget Sound, 352,161 centals of wheat, including flour, of the aggregate value of \$5,635,156. Estimated by tons, there were exported to Great Britain alone in 1878-'74 49,469 tons of wheat, increased next year to 64,939 tons; the year ending August 1, 1876, 79,911 tons; 1877, 112,697 tons; while to all countries for the year ending August 1, 1878, there were exported 176,000 tons of wheat, including flour. A corresponding increase during the next ten years will make Oregon take rank among the greatest wheat-producing States in the Union.

The tonnage in like manner has been increasing each year since 1868. In that year the gross tonnage of vessels which arrived in Columbia River was 19,966, and of those departing 16,022, including steamers to and from San Francisco; whereas in 1876 the arrivals amounted to 56,882 tons register, and the departures to 76,617, an increase of 300 per cent. on arrivals and nearly 400 per cent. on departures during a period of eight years. In 1868 47 vessels went to sea over the bar of the Columbia River; 106 in 1874, carrying 71,012 tons; 108 in 1875, carrying 134,500 tons; 231 in 1876, carrying 154,459 tons; and 256 in 1877, carrying 232,897 tons; while in 1868 the total tonnage carried to sea by all classes of vessels was 23,367. The river tonnage shows equal development. In 1868 there were received at Portland by river-steamers 418,968 sacks of flour and 55,368 sacks of wheat, and there were, then only nine steamers engaged in the carrying trade on the rivers, with a registered tonnage of 2,179. In 1875 the Oregon Steam Navigation Company, Oregon Steamship Company, and Willamette Transportation Company had together 32 steamers and barges, with an aggregate tonnage of 18,698 alone; in addition to which other individuals then owned 12 smaller steamers, of the aggregate tonnage of 2,473. In 1878 the river-steamers plying on the Columbia and Willamette Rivers, including three steam-tugs on the Columbia bar, numbered 72, with an aggregate registered tonnage of 25,089; in addition to which there were 20 river-barges, of the united tonnage of 5,661. The productions raised by the farming population required greater facilities of transportation and new steamers each year. To these have been added two railroads, 250 miles in length, which bring to Portland daily large quantities of wheat, flour, and other produce. Up to January, 1868, the whole of the export trade, except to Puget Sound and Honolulu, was with San Francisco. According to the manifests of the cargoes of all the steamers and coasters from Oregon to the Golden Gate, the value of merchandise then exported was \$1,678,793; while the shipments by Wells, Fargo & Co., from Oregon mines, of gold dust, bars, coin, and treasure, a record of which was then

accurately kept, amounted to \$1,001,000. In 1869 and 1870 these gold shipments fell off, and in their place there were shipped increased quantities of produce and merchandise, until for the year ending August 1, 1875, the produce exports to San Francisco amounted in value to \$4,105,025; 1877, to \$5,329,192; and 1878, to \$6,134,491. In 1873 and 1874 the passenger traffic by the ocean-steamers between San Francisco and Portland had fallen off considerably, and at the end of each of these years Oregon had not gained more than 800 to 1,000 per year of arrivals over departures. From August 1, 1875, to August 1, 1876, a manifest increase had taken place in the passenger travel. During that year the State Board of Immigration reported to the Legislature a gain of 11,213 persons in population for the twenty months preceding August 1, 1876, of which it was ascertained that 9,563 had come by the ocean-steamers *via* San Francisco. From August 1, 1876, to August 1, 1877, the total number of persons who arrived by ocean-steamers at Portland, excluding soldiers, Chinamen, and children under three years, numbered 12,843; and during the year 1878 the estimated gain in population to the State of Oregon was upward of 20,000, the most of whom arrived per Oregon steamers *via* San Francisco.

The commerce of the State has shown equal improvement. Before 1868 the shipments of gold dust, bars, and treasure formed in value three fourths of all the exports of Oregon; but these gold shipments gradually declined until 1872, when the amount was quite small. In 1868 the total exports of merchandise from the Columbia River amounted to \$1,780,408; in 1870 there was very little increase, but in 1873 the gross exports of merchandise amounted to \$4,124,606, excluding treasure. The dutiable imports from foreign countries rose from \$90,500 in 1860 to \$809,540 in 1872, while the foreign exports during the like period kept in the same proportion until 1872, when the *foreign* exports only amounted to \$778,376, so that the balance of foreign trade was in that year against Oregon. She rapidly, however, recovered this loss, for the direct imports from foreign countries fell away from \$808,540 in 1872 to \$475,508 in 1877, while the foreign exports in the same period (five years) rose from \$779,376 in 1872 to \$1,498,722 in 1874, and to \$3,990,191 in 1877; showing a vast gain annually of exports over imports from 1871 to 1877. For the year ending August 1, 1875, the gross exports of produce and merchandise from Oregon amounted to \$10,176,251, or deducting shipments of treasure per Wells, Fargo & Co., of \$2,278,250 (which properly are not exports), the net total exports for the year ending August 1, 1875, amounted to \$9,175,087; 1877, to \$11,571,355; and 1878, to \$14,644,973. The details of these exports during the years just mentioned are made up from the annual reports of the Board of Trade, and are therefore authentic. As regards the imports since 1872,

only one third of the foreign imports come direct to Portland—the other two thirds coming *via* San Francisco, where the duties are paid. It is therefore impossible to give a correct detail of the import trade and contrast the same with the exports. The export trade with China and Australia has fallen off, and the cargoes of lumber formerly shipped to those countries are now dispatched from Puget Sound. One vast gain to the commerce of Oregon has been the dissemination of information during the last five years as to the safety of the Columbia bar.

The advance in the value of lands has been no less remarkable. In 1868 prairie and fair improved farming lands in Linn, Lane, and Yamhill Counties, and generally over the Willamette Valley, could easily be obtained at from \$15 to \$20 per acre, while distant brush-land, or what is now called oak-grub land, was selling at \$3 to \$4 per acre. When the Oregon and California and Oregon Central Railroads were built, farm-lands were sold at what were then considered speculative prices, \$25 to \$30 per acre; and afterward, in 1872 and 1873, a reaction took place, and prices of fair farming lands fell to \$20 per acre. This did not long continue, however; and in 1875, 1876, 1877, and 1878, prices kept gradually advancing, and instead of large tracts, as was common in 1872 and 1873, being in the hands of a few individuals, unable, as they were then, to cultivate the same, now a majority of the best farming lands in the Willamette Valley are held in tracts of 160 to 320 acres, and at firm prices of \$30 to \$40, and occasionally, as around Albany and Salem, at \$50 to \$60 per acre. High oak-lands, which in 1870 commanded \$5 per acre, can not so easily now be obtained in advantageous localities at less than \$12 to \$15 per acre; while hill cleared lands, which were then regarded as fit for pasture merely, and were selling at \$10 per acre, now command \$20 to \$25 per acre, dependent on the location and county. An instance of how little was formerly known as to the value and productiveness of these hill lands is seen in the case of the Waldo Hills around Salem, which are of a red color, highly productive, easily workable, and rich in soil. There, although contiguous to Salem, to good roads, to railroads and steamboats, it was difficult to obtain more than \$7 to \$8 per acre for these lands when cleared, whereas to-day they sell readily (the cleared portions) at \$30 per acre, exclusive of improvements. The best samples of wheat exhibited at the Centennial and Paris Expositions of 1876 and 1878 were raised from these hill lands. In farm-buildings there has been great improvement, and also in fences. The immense tracts of brush-land in Yamhill, Marion, Polk, and Clackamas Counties have been converted since 1874 into wheat-lands. So extensively has this improvement taken place that the aspect and appearance of several districts have been so changed as to be scarcely recognized. In the Waldo Hills clear-

ing operations, both east and west, have put into cultivation large tracts of land which hitherto were unproductive and worthless. So also in the Polk and Benton Hills. The present value of Willamette Valley farms is bound to be maintained, and, although not desirable, the indications are that they will go very much higher—especially in the eastern portion of Lane, Linn, and Marion, where a narrow-gauge railroad is projected from Springfield, in Lane County, to Salem. At present, the value of lands in this stretch of country, 75 miles in length, is 35 to 50 per cent. less than in the western portions of the same counties. A greater progress in value, however, has taken place in the Walla Walla Valley and districts around the same. In 1868 improved land, which now sells there at \$20 to \$25 per acre, was sold for \$2.50 per acre, and in 1873 the same land was selling at \$3 per acre. All along eastern Oregon and eastern Washington Territory, up as far as Lewiston, an advance in values of farm-lands has been maintained, although not to the same extent as in the Walla Walla Valley. Improved agricultural lands sell in the Lewiston and Palouse Valley districts for \$6 to \$10 per acre. In the Umpqua Valley, in southwestern Oregon, good farming lands prior to the opening of the railroad to Roseburg were selling at \$5 to \$6 per acre; they now find purchasers at \$15 to \$16, and frequently \$20 per acre. In southern Oregon there has been little advance during the past ten years. In some cases, owing to local circumstances, they have advanced slightly; but as a general rule the want of transportation facilities has retarded both the settlement and development of southern Oregon.

In 1868 Oregon and Washington Territory had not commenced the export of salmon, which industry has only progressed during the last seven years. The year 1871 was the first in which canned salmon were exported; 30,000 cases realized \$150,000. In 1873 91,000 cases realized \$501,000. At that time salmon was so plentiful and cheap that the enterprise was very profitable, and the foreign demand had so increased that the people were wild with excitement; and as a necessary consequence canneries were erected on both sides of the Columbia River, even as far up as the Cascades. These canneries increased the production and gradually drained the river, and the salmon fisheries, regarded as for ever practically inexhaustible, became endangered through want of proper legislation. In 1875 there were 335,000 cases exported, which realized \$1,650,000. In 1876 the capacity of all old canneries was increased, and new canneries were still erected. So greatly had this industry extended that in the end of 1876 there were thirty canneries in operation, with a united capacity for canning 795,000 cases of salmon. In that year, however, the maximum production was reached, 479,000 cases being then exported, which realized \$2,598,000. In 1877 there were exported

389,508 cases, yielding \$2,338,000. But the catch of that year and of 1878—which latter was only 345,000 cases—conclusively proved that without legislation and the necessary protection to the salmon this valuable commercial product would soon be lost to the State. Accordingly both the Legislatures of Oregon and Washington Territory passed joint laws, which took effect in January, 1879, for the protection of these fisheries, and to raise a revenue each year to propagate and still more develop and increase the artificial production of salmon. This legislation has placed the canneries on a firmer basis, and given those engaged in the industry greater confidence. The foreign demand has become a settled fact, and Oregon canned salmon is now used in nearly all civilized countries as a daily article of diet.

The various agricultural products of the State also show a rapid increase. In 1868 the total wheat-crop raised in Oregon was 1,535,000 bushels; in 1870, 2,270,000 bushels; in 1873, 3,127,000 bushels; in 1875, 5,251,102 bushels; and in 1877, 7,896,676 bushels. These figures indicate a rapid progress, and considering that the State's population in 1877 was about 120,000 persons, including cities and towns, it will thus be seen that the quantity of wheat raised was 66 bushels to every man, woman, and child in the State, or an average of 19 bushels per acre; and the price obtained that year was \$1.75 to \$2.10 per cental. In 1869 the quantity of wool produced all over the State was 1,066,455 pounds, of which there was exported to San Francisco 3,190 bales, of the value of \$134,749. In 1871 there was 1,750,600 pounds of wool produced; in 1873, 2,036,000 pounds; in 1875, 2,638,050 pounds; while in 1877 there was raised 5,736,650 pounds, of which there was exported to San Francisco alone, as admitted by the Chamber of Commerce of that city, 4,929,675 pounds. The value of the wool exports had increased from \$134,749 in 1869 to \$756,000 in 1876, and \$998,305 in 1877; and 1878 returns show it to be \$1,267,373, an increase of 750 per cent. in eight years. The quality of the wool each year has so much improved that Oregon wool now commands (like its wheat) the highest prices in the Boston market, and received medals and diplomas at the Centennial of 1876 for (using the words of the commissioners) "merino wool, very fine specimens of fine fiber and good staple, very much resembling Australian wool, and giving evidence that Oregon can produce wool of very great value." The woolen-mills in the State consume a considerable portion of the crop each year, and their consumption is always increasing. The market for the oat-crop is in the State, Puget Sound, British Columbia, and California. In 1868 there was raised 2,029,909 bushels of oats; in 1875, 2,983,086 bushels, which realized \$1,657,563; and in 1877, 4,127,663 bushels, averaging 35 bushels to the acre, from which there was exported to San Francisco 135,153 sacks. But this article of commerce fluctuates

more than any other agricultural product raised in Oregon on account of the wide difference in prices between one year and another, caused by there being a large or small crop of oats for the time being in California. In the lesser agricultural productions, such as barley, hay, potatoes, and corn, during the last ten years, equally favorable progress has been made. For instance, in 1860, there was raised 26,254 bushels of barley; in 1870, 210,736, averaging 29 bushels per acre. Of rye there was raised, in 1870, 3,820 bushels, and in 1875, 17,263 bushels. In 1860 there was raised only 27,386 tons of hay, and in 1875, 161,433 tons, which realized \$1,937,196. Oregon has always been famed as a good potato country. In 1870 Oregon raised 303,319 bushels of potatoes, and in 1875, 527,829 bushels. Of Indian corn or maize there was raised only 72,133 bushels, and in 1875, 96,720 bushels; but Oregon is no corn country, owing to the cool nights of summer. It may be noticed that the average per acre of each product raised is small compared with the amount raised in Great Britain. This is quite true, but in Oregon the low average is due to a very superficial knowledge—often no knowledge at all—of farming, and to volunteer crops. But while this is so, the United States Commissioner of Agriculture at Washington, D. C., in his annual report to Congress for 1876, says *that in all crops* (except Indian corn) which have been raised in the United States, Oregon far exceeded the average of every other State in the Union, and has continued to do so year after year. The same officer estimated the value of farm products in Oregon annually per head of farming population to be \$539, and per head of the entire population of the State, \$78.06; while he estimated the value of farm property owned by persons engaged in agriculture to be \$2,300 per head. The amount of exports is \$100 to every person in the State.

The increase in stock is to be found chiefly in eastern Oregon. There are in that part of the State 57,416 square miles of land, which, with the exception of a very limited portion, is all fit either for grazing or agriculture. In 1870 there were 318,123 sheep in the State, one fourth of which were located in eastern Oregon, one half in the Willamette Valley, and the remainder in Douglas County and southern Oregon. These flocks kept increasing very materially in eastern Oregon, until there were in 1877 about 1,963,556 sheep in the State, of which eastern Oregon possessed nearly two thirds, and the remainder were in western or southern Oregon. These figures are tested by the wool product of 1878, which realized upward of 6,000,000 pounds of wool; and as the average yield is but three pounds of wool per sheep, the figures above given are thus below the correct number of sheep. This industry promises to develop itself enormously during the next ten years, as evinced by what has taken place in California. That State twenty years ago only produced 1,000,000 pounds of

wool, or less than one fifth of what Oregon now produces, and it was then stated of California, as is frequently said now of Oregon, that she could not produce much more; yet in 1876 California produced the enormous quantity of 56,550,970 pounds of wool, as shown by the statistics of the Chamber of Commerce of San Francisco. The vast public domain in eastern Oregon and eastern Washington, containing together upward of 100,000 square miles of land preëminently suited for sheep-pasturage, may therefore be, as in California, eventually occupied by sheep-ranches; and if, as statistics have shown, Oregon wool increased 750 per cent. the last eight years, it is reasonable to suppose the same increase may follow in the next ten years, in which case the production of wool would then amount to 58,960,000 pounds. In 1870 there were 120,197 cattle in the State; in 1875, 276,466; the number in 1878 is estimated at 425,000. The prices realized in 1874 and 1875 were poor, but now that cattle from the eastern ranges are transported to the Union and Central Pacific Railroads for shipment to the Western States, prices have advanced considerably and given cattle and stock men greater encouragement to increase their herds. In 1870 there were raised 119,455 hogs; in 1875, 181,500. Wheat had attained such a high figure during these five years that farmers, instead of putting it into hogs, sold it, and no inducement was thus afforded to cultivate or increase the production of hogs. A noticeable feature is the increase of milch cows. In 1870 there were 62,400 milch cows; in 1875, 80,900; and in 1878 (estimated), 93,000. The United States Commissioner of Agriculture points out that since 1872 Oregon has given more attention to dairying, and shows, compared with other States, the largest increase in numbers (per population) of cattle and milch cows. The raising of horses has become another favorite industry, developing gradually. In 1870 there were 52,802 horses in the State; in 1875, 75,966; and (estimated) in 1878, 106,350.

Beyond a very large number of flour and saw mills, four woolen-mills, a number of furniture and sash and door factories, eight or ten foundries and machine-shops, one iron-smelting works, one oil-works, one flax and one paper mill, a shoe factory, and a few other lesser factories, there are no great manufacturing enterprises, except ship-building at Coos Bay, where 43 vessels, including two large ships, the latter of the value of \$80,000 each, have been built. At Portland the majority of the river-steamers (there are 72 in number) have been built, and a United States steamer; the cutter Tom Corwin was also built in 1877. The flour manufactured in the State is of the finest quality, and finds a good increasing market in San Francisco, British Columbia, and Great Britain, the exports of flour having increased since 1872. The several coal-mines on the coast of Oregon export annually about 55,-

000 tons of coal to San Francisco, while the lumber exports from Coos Bay alone are 24,000,000 feet annually. The total number of feet of lumber produced in the year 1875, according to the State census returns, was 98,235,684 feet. There are owned at Portland five ocean-steamers, of the value of \$700,000; nine sailing vessels, of the value of \$210,000.

The extent of railroads in the State is as yet limited. The Oregon and California and the Oregon Central in 1870 opened up and developed western Oregon, making what was considered prior thereto a wilderness one of the most favored valleys in the United States. Since 1871 no new railroad has been constructed in the State, except the Dayton and Grande Ronde narrow-gauge road, which has opened up to Portland a fine farming country, and which is now advancing to Dallas, in Polk County, a distance of 36 miles. The intention of the owners of the west side railroad is to continue that road to Corvallis from St. Joseph during 1879, a distance of 55 miles, while on the east side of the Willamette Valley a new road is projected on the narrow-gauge system, to extend from Springfield in Lane County along the foot-hills of the Cascades on to Salem, a distance of 75 miles, opening up a country which has suffered hitherto for want of transportation facilities, and which railroad will eventually be continued to Portland *via* Oregon City and the west side. A ten-mile railroad is also expected from Corvallis to Philomath this year, which will become a feeder to the Oregon Central (broad gauge) Railroad when constructed to Corvallis. A railroad (narrow gauge) is also projected from Umatilla to Grande Ronde Valley, Union County, 120 miles, which is much needed to open up one of the finest agricultural sections of the State. Various other narrow-gauge railroads are proposed.

The financial progress has been steady, so that the State and the city of Portland possess all the banking and money-lending capital necessary to carry on business for some years to come. Outside of the capital owned and employed by the various banks and financial institutions, there are large sums of money loaned out by private capitalists seeking investment, which have been and are being invested in various productive enterprises, while rates of interest on loans and discounts are reduced to 10 per cent. per annum, and money can now be obtained on good security whenever required.

Prior to 1868 large shipments of gold and silver were made from Oregon, the gold product alone of the State between the years 1851 and 1866 amounting to \$22,000,000. From that year until 1874 the product fell off, and has not since averaged \$1,500,000 per year.

Since 1868 the locks at Oregon City, the State Capitol at Salem, the University of Oregon at Eugene, the penitentiary at Salem, the post-office at Portland, the county court-houses

at Albany, Salem, and Portland, and various lesser public buildings have been erected, at an aggregate cost of \$2,050,000; while the United States have spent in the improvement of the rivers and in the locks building at the Cascades close on \$1,000,000 in the last ten years.

In 1879 the spring crop of wheat from the Willamette Valley proved below the average. At the same time the fall wheat seeded in the autumn of 1878 was double that of any preceding year, but the spring was backward and the rains continued unusually late. The receipts were therefore estimated at 45,000 to 48,000 tons of wheat from eastern Oregon and eastern Washington, and 85,000 to 90,000 tons of winter or fall-sown wheat, and from 40,000 to 45,000 tons of spring-sown grain, from western Oregon, aggregating about 180,000 tons. Deducting therefrom what is necessary to sustain the population of 160,000 souls, and seed for next year's crop, the probable surplus of wheat for export would certainly not exceed 140,000 tons—a deficiency of 10 to 12 per cent. compared with last year. Oats and barley yielded an average crop all over the State; also potatoes. Fruits, especially the plum, peach-plum, cherry, and smaller fruits, suffered much, and fell far short of previous years, while the apple and pear crops are slightly deficient. The hay-crop shows an increase of 50 per cent. over previous years, while pastures never were in finer condition in the fall; and feed for cattle and sheep, both in eastern and western Oregon, has been most abundant and exceedingly above the average. Flaxseed was a profitable and prolific crop; and hops have advanced considerably in price, and the quality was very good.

The exports of salmon for the year from August 1, 1878, to August 1, 1879, aggregated 412,924 cases, yielding \$1,863,069, of which 271,139 cases were exported *via* San Francisco, and 141,785 cases to Great Britain direct from the Columbia River, showing a decrease of 79,323 cases in direct shipments to Great Britain, and an increase of 99,812 cases in shipments by way of San Francisco over the preceding year. The total exports for the year ending July 30, 1879, amounted to \$12,282,047; for 1878, \$14,644,973; for 1877, \$11,571,355.

The religious statistics of Oregon show the following results: Baptists—6 associations, 77 churches, 3,454 members; Catholics—18 churches and numerous stations, 20,000 members; Congregationalists—28 churches and preaching stations, 996 members; Jews—1 synagogue; Methodist Episcopal—3 conferences, 5,500 members; Presbyterians—2 presbyteries, 27 churches, 1,564 members; Protestant Episcopal, 34 churches, 883 members; Seventh-Day Adventists—7 churches; Unitarians—2 churches; Universalists—5 churches.

The number of children in the public schools in 1879 was 56,458; in 1878, 53,462. The amount of money apportioned for 1879 was \$36,137. A portion of the press of the State

has constantly urged the necessity of maintaining the public schools simply as common schools, and arresting the growth of the high school as subversive of the intent and ends of the public-school system. It is stated that "one result of the discussion in Oregon has been the creation of a public sentiment which will prevent any further direct appropriations from the Treasury like those so long made in favor of the college at Corvallis." The points presented against high schools in the discussion may be seen in the following extract from the "Oregonian":

We hold that, for the most part, the useless instruction in the primary schools consists of the features required for admission into the higher departments. This is emphatically true as regards schools in the cities, and it will hold good for the provincial schools, so far as they imitate the town customs. The useless, if not directly injurious, features of the primary schools are those which are thrust upon them in order to complete the machinery of the so-called system. The remedy is not far to seek. It is to withdraw the energy now wasted in developing systems, and direct it entirely toward improving the methods of primary instruction. Sufficient mental and material force is now expended on the schools, but it is not exerted in the right direction. The remedy is to give less attention to the ornamental high schools and more to the *alma mater* of the people—the common schools. Children are bewildered and energy is wasted by too rigorous adherence to "method" and "system." Some development of intellectual powers beyond what young children in our schools can be expected to have attained is necessary before formulas and definitions which are pressed upon them can be comprehended. These can be understood only through their application. The process first, and then the "rule." Bright children will often commit to memory rules and definitions fast enough, but after all will not know a syllable of their meaning till they go back and learn what they should have learned at first—namely, the processes out of which the rules and definitions are evolved. Then, after the process is comprehended, the precise manner in which it is formulated makes little difference.

The number of convicts in the penitentiary is 200. The increase has been over fifty in ten months.

An investigation was made by a committee of the Legislature with regard to expenditures under the previous State administration. A lengthy report accompanied with much testimony was made and published.

P

PACKER, ASA, born at Groton, Connecticut, December 20, 1806, died in Philadelphia, May 17th. He began to learn the tannery business, but on the death of his employer in 1822 went to a relative in Susquehanna County, Pennsylvania, and learned the trade of a carpenter. He then went to New York and worked at his trade, but, meeting with little success, returned to Susquehanna County. A year later he married the daughter of a poor farmer of Springfield. The fiftieth anniversary of this wedding was celebrated in 1878.

The Oregon Woman's Association held its sixth annual convention on February 11th. The results secured by the Association are thus summed up in the address of the President:

Never until last September were we honored with other than a brief, spasmodic, and strongly contested hearing, which was in its results unsatisfactory. True, we had prevailed upon our legislators, prior to that time, to give us the "woman's sole-trader bill" and the "married woman's property bill," both of which, however, must remain comparatively null until we can be empowered with the political freedom necessary to make such bills available to any class. Never until the last session has woman's right to a place in the government received a tacit endorsement from a vast majority of its legislators as a body. During that session every bill for the promotion of woman's interests which was brought up for consideration was passed almost without objection. Women were made voters on all school questions and road interests; and their individual property rights were just as nearly secured to them by law as legislative action can secure them to any class which is denied personal representation.

But, though I remained at the capital, as your executive, during two thirds of the entire session, I failed to get a bill before either House for amending the Constitution by striking out the word "male" from its code of rights, the failure resulting from the desire of our friends to pass the other bills above mentioned before reaching this one.

An act of the city of Portland forbade the employment of Chinese laborers on the streets of the city. The contractor applied to the United States Circuit Court to enjoin the city from enforcing the act. Judge Deady granted the injunction, and said that the treaty recognized the right of the Chinese to make this country their home, and this necessarily implied the right to live and to labor for a living. If the State may prevent the Chinese or the subjects of Great Britain from working upon street improvements and public works, it is not apparent why it may not prevent them from engaging in any kind of employment or working at any kind of labor. This view was confirmed by Justice Field, who said that the treaty with China gives Chinese the right to domiciliation in the United States "for purposes of curiosity, for trade, and for permanent residence."

He continued for four years farming and jobbing until the opening of the Lehigh Valley Canal, when he removed to Mauch Chunk to become a boatman on the canal. His was one of the first boats dispatched, and being once engaged in the business, his natural abilities began to manifest themselves. Not contented with the profits from his own boat, he contracted for the mastership of a second, which he put in charge of his brother-in-law. From that time his prosperity grew steadily. He saved his earnings, and invested them judi-

ciously. His penetration of mind now enabled him to see what the circumstances demanded, and in 1831 he opened a small store on the bank of the Lehigh, giving up his charge as a boatman, although retaining a money interest in several boats. Combining the knowledge he had gained with his experiences as a carpenter and builder, he opened a boat-yard and began to build boats, and contracted for building locks on the upper Lehigh, which he completed in 1837. He became well known as a contractor in all the Lehigh country, and in 1838 he engaged to build boats at Pottsville for the transportation of coal to New York City. This work caused a change in the route of transportation to the new canal from that by the way of Philadelphia. He was now fully embarked in the mining and transportation of coal, and had entered upon the career of prosperity and fame in which he achieved great success. In 1851 he succeeded in awakening public interest in his plan for the Lehigh Valley Railroad, and having obtained the necessary subscriptions he submitted his plan for the construction of the road from Mauch Chunk to Easton. In 1855 the work was opened for business, with its connecting branches above Mauch Chunk to Hazleton and Mahanoy City. After this success, Mr. Packer proposed to the company to extend their road north and connect with the Erie Railroad near or on the New York State line. This carried the new road along the windings of the Lehigh River, through the narrow gorge in the mountains, across the Wyoming Valley, and up the Susquehanna River to Towanda, thus opening up the entire anthracite region of Pennsylvania. As he had foreseen, this gave at once an enormous impetus to the coal-mining business, and developed other interests and industries in a proportionate degree, adding greatly to the wealth of the State and its active prosperity. Under Mr. Packer's charge as president, the road became an immense success, and speedily made its projector known and popular not only in the coal regions, but throughout the State. But all this was not accomplished without vast struggles under difficulties. He was really swamped financially, but friends came to his aid and carried him through; and ere long he was rewarded by returning millions, and by a substantial hold upon the vast resources of the Lehigh Valley, which ultimately made him the richest man in Pennsylvania.

Early in his career he became interested in political affairs. In 1844 he was elected to the State Legislature. His object was to secure the creation of a new county, of which Mauch Chunk should be the county seat. He succeeded in obtaining the formation of the present county of Carbon. He then held for five years the position of Judge of the County Court. Afterward he was twice elected a member of Congress, serving from 1853 to 1857 with honor to himself and to the satisfaction of his constituents. He became a prom-

inent Presidential candidate, and received in the Democratic Convention held in New York in 1868 the vote of Pennsylvania through fourteen ballots, and was withdrawn in favor of General W. S. Hancock. In 1869 he was nominated by the Democrats of Pennsylvania as their candidate for Governor, and such was his popularity that he failed of an election by only 4,500 votes. In the previous year General Grant, the Republican candidate for the Presidency, carried the State by a majority of 25,000 votes.

He solved the labor question in his district by founding the Lehigh University. A strike occurred among the boatmen on the Lehigh Canal, and they collected with their boats on the pool of the river, above the dam at Easton, with all the uncontrolled passions and disorderly excesses that accompany such excitements in the coal regions. Mr. Packer, having been himself a boatman a few years previous, and in the full confidence of his kindly feelings and his knowledge of their thoughts and needs, went to them for a friendly talk on the situation. He had no fear of his life in meeting this excited crowd, although from personal experience he knew the temper of these turbulent men. However, they would not listen to him, but seized him and flung him into the river. Without exasperation, and without accounting this outrage an additional reason for severity in pursuing the leaders of the mob to punishment, he viewed it as an outburst of passionate ignorance, and his answer to the outrage was a great free school. It would take a generation to disperse the ignorance, but the rising generation should have the benefit of all that free tuition and the wise disposal of his wealth could give it. The foundation and endowment of this university was the crowning act of his benevolence. The immediate object is to furnish free of cost to young men of talent and ambition a place for a collegiate education of a practical character, such as can be turned to account in the more important walks of professional and business life at the present day. The endowment of the university reached a million and a half before his death. In 1878 a library building was erected at a cost of \$70,000, having a shelf capacity for 60,000 volumes. Other buildings for public use were erected by him, among which was an Episcopal church in Mauch Chunk. He was a man at once gentle and firm; amiable in discussion and inflexible after decision. He was greatly esteemed and beloved by those who knew him, and his most honorable monument will be the memory of the noble qualities and virtues with which he adorned the character of the workingman and most useful private citizen.

PENNSYLVANIA. The annual session of the Legislature commenced on January 7th. In the Senate A. J. Herr of Dauphin County, Republican, was elected President *pro tem.* by a vote of 32 to 17, which was about the rela-

tion of parties in that body. In the House Henry M. Long, Republican, was elected Speaker by a vote of 111 to 76. The National vote was 3 in the Senate and 10 in the House, in each for a third candidate.

In discussing the affairs of the State in his message, the Governor alluded to the most important subject of difficulties between workmen and their employers, and brought forward the English system of arbitration, of which he said:

In England, the system of arbitration and conciliation originated with the manufacturers and operators, and has changed, wherever fairly tried, the old feeling of bitter hostility between the employer and the employed into one of mutual respect and confidence. With the same class in Pennsylvania lies the responsibility of the initiative; with the Legislature the responsibility of education. Deeply impressed with the importance of bringing about, if possible, a mutual understanding of the two classes, and creating an arrangement for the amicable and rational settlement of all disputes and controversies, I gladly availed myself in the early part of the year of the services of a gentleman, a student of industrial questions, who visited England to investigate the form, practical workings, and results of the various systems of arbitration in operation there, and commissioned him a special agent, under the seal of the State, to examine and report the same on behalf of the Commonwealth. His report I have the honor to transmit. I have refrained from any discussion of the system, which is elaborately presented in the report, and shall close simply by summing its results. Wherever established, an intelligent co-operation between employers and employed has been effected, and steady employment secured at those rates of wages which the industrial conditions of a competitive market enabled capital to pay and maintain a steady production. Strikes, riots, outrages, and trades-union murders have become things of the past. In prosperous times labor has shared in the increased profits of capital, and in periods of depression each has mutually supported the other with the minimum of loss and suffering.

On January 21st, J. Donald Cameron was elected Senator in Congress by a vote of 28 in the Senate to 16 for Heister Clymer; in the House, Cameron had 107 votes, Clymer 76, and 16 scattering.

An act to encourage the planting of trees along roadsides was passed. It provides that any person liable to road-tax who shall transplant to the side of the public highway on his own premises any fruit, shade, or forest trees of suitable size, shall be allowed by the supervisor of roads where roads run through or adjoin cultivated fields, in abatement of his road-tax, one dollar for every four trees set out; but no row of elms shall be placed nearer than seventy feet, no row of maples or other forest trees nearer than fifty feet, except locust, which may be set thirty feet apart; and no allowance as before mentioned shall be made, unless such trees shall have been set out the year previous to the demand for such abatement of the tax, and are living and well protected from animals at the time of such demand. Trees transplanted in the place of dead trees are to be paid for in the same manner.

A uniform system of municipal government for the various cities of the State was contem-

plated in a bill placed on the House calendar by a vote of 115 to 38, although it failed to become a law. It proposed to forbid cities to borrow money; the councils should raise and appropriate all moneys; poor-boards, school-boards, highway and street commissioners, etc., were abolished; contracts should be made only to the extent of yearly appropriations; select councils should be composed of tax-payers who had held real estate for at least three years before their election, and should have paid taxes thereon; they were to be elected by the cities at large, in order to obviate a centralization of any single interest. The bill assimilated the office of mayor to that of president or governor; created a permanent and non-political police force; consolidated the various departments, and provided that the expenses for local improvements should be borne by the property immediately benefited and not by the city at large. The preparation of the bill had cost the State \$20,000.

An act limiting a day's work to eight hours was indefinitely postponed in the House by a vote of 102 to 57.

A new temperance movement appeared in the Senate under the form of a bill to prevent the sale of any spirituous, vinous, malt, or brewed liquors, which are in any manner adulterated, mixed, drugged, diluted, or compounded with drugs or other deleterious or poisonous matter. It was reported favorably by the Committee on Vice and Immorality. It provided, among other things, for the appointment of inspectors by the courts, the confiscation of liquors, fine and imprisonment of offenders against the law upon conviction after trial by jury, etc. A bill to secure a reformation in the same direction was introduced in the House. It provided for the appointment of a State chemist, who should have a laboratory in connection with the Agricultural Department; that people should send specimens of spirituous liquors, canned fruits, ground spices, pepper, etc., to be analyzed; and that they should not sell anything without being tested, under severe penalties, a fine of \$1,000 and imprisonment for from one to five years. Neither of these bills became a law.

An act was passed authorizing councils of cities of the second class of the Commonwealth to make an amicable settlement of municipal liens for grading, paving, and curbing, or otherwise improving streets or avenues in said cities, either under general or special laws.

As the future sessions of the Legislature will be biennial, a bill was passed to provide for the receiving, opening, and publishing of the returns for the election of State Treasurer and Auditor-General, when elected at the same election. It provides for the appointment of a committee from the Senate and House to act in conjunction with the Speaker *pro tem.* of the Senate and Speaker of the House. As the Constitution says, "No senator or representative shall, during the time for which he shall have been elected, be appointed to any civil of-

office under this Commonwealth," the objection was raised to the bill that this was a civil office in order to settle the matter for the future. The Speaker decided the point not well taken, as this was not a civil office, but an additional duty imposed upon certain members of the Legislature, and was clearly constitutional—as much so as the serving upon an inaugural committee or any other committee.

A bill was reported favorably to reestablish a local-option law in the State. An unfavorable report was made on the bell-punch bill. It was urged that the contrivance in Virginia had proved to be a fraud. Neither passed.

A bill to protect religious liberty and to provide for the relief of persons who observe the seventh day of the week as the Sabbath, and to exempt them from the penalties of the act of Assembly passed April 22, 1794, was discussed in the Senate and failed to pass—yeas 21, nays 17, which was five less than the majority required by the Constitution. The bill has thus been defeated for four sessions, gaining, however, five votes on the last occasion.

The women gained a point at this session by the passage of a bill to remove the disability or disqualification of married women from acting as incorporators or officers of any association incorporated heretofore, or that may be incorporated hereafter, for purposes of learning, benevolence, charity, or religion. Another bill, to authorize the appointment of women as prison inspectors, passed the House. In the Senate it was reported negatively; but a motion to place it on the calendar was passed—yeas 37, nays 7. It failed to become a law.

A vagrant act was passed, which declares that any person going about from place to place begging shall be deemed to be a tramp and guilty of a misdemeanor, and on conviction shall be sentenced to solitary confinement at labor, or in the county jail or workhouse, for not less than six months nor over eighteen; provided, that if he can prove that he does not make a practice of going about begging he shall be discharged; also, that any tramp who shall enter a dwelling-house against the will of the occupant, or kindle a fire in the highway or on the land of another, or be found carrying any dangerous weapon, or do or threaten any injury not amounting to a felony, shall upon conviction be sentenced to solitary confinement at labor for not over two years.

A bill called the "store-order" bill was passed. An amendment on its passage in the Senate provided that it should be a misdemeanor for an employer to sell to an employee any merchandise at a higher price than the cost price of said article in the same neighborhood, and declaring that any person convicted of such misdemeanor should be punished by fine or imprisonment, or both. The object of the bill was to secure to operators and laborers in mines and manufactories of iron and steel the payment of their wages at regular intervals in lawful United States money. When it reached the Governor,

it was vetoed. His objections were, that the bill was special and within the constitutional prohibition. The Governor urged that if the act was general, it would be open to valid objection as being contrary to the genius of our free government, and as based upon a theory subversive of the true principles of the State Constitution, in that it denies the laborer the right to sell his labor to whom he pleases and for such prices and on such terms as seem good to him, without molestation, hindrance, or restriction. Another objection urged was that the bill interfered with the free employment of capital, arbitrarily controlled trade, substituted legislation for the laws of supply and demand, and was the beginning of a system of paternal government at variance with our political institutions, which always proved when tried injurious alike to the employed as well as the employer.

The subject of the State receipts and expenditures was one of the most important before the Legislature. A special communication from the Treasurer stated that the fiscal year beginning on December 1, 1879, would open with a deficiency of \$2,219,036. This deficiency he ascribed to decreased revenues and the extraordinary expenses of the riot of 1877. In consequence, a considerable amount was due to the schools, and also to the charitable institutions under an appropriation of which only a small amount had been paid.

A most important revenue measure adopted was the act to tax corporations, which makes some special additions to the existing law. Every corporation is compelled to register in the office of the Auditor-General its name, date of organization, place of business, offices, and the amount of capital authorized and paid in. Every corporation doing business in the State, except banks, savings institutions, and foreign insurance companies, is required to file a report with the Auditor-General in November of each year, showing the amount of stock authorized, number of shares issued and amount paid on each share, amount of capital paid in, and the date, amount, and rate of every dividend paid during the year. When a company fails to declare a dividend of less than six per cent. upon the par value of its stock, the treasurer and secretary of the company shall make a sworn estimate of the actual cash value of the stock, not less, however, than the average price for which such stock sold during the year, and not less than the value as measured by the dividends paid. If the Auditor-General or State Treasurer is not satisfied with this valuation, he is authorized to make a valuation for the purpose of assessment, and the company is allowed an appeal as provided by existing law. In case of failure to furnish the report and appraisement, a penalty of ten per cent. is to be added to the tax of the company for each year such failure occurs. In case a company shall intentionally fail to make report for three successive years, the Governor of the

State may declare its charter forfeited. All companies doing business in the State, with the exceptions mentioned above, are subject to taxation as follows: If dividends have been declared during the year amounting to six per cent. of the par value of the capital stock, or over, the rate will be one half mill upon the capital stock for each one per cent. dividend declared. If no dividend has been declared, or if the dividends amount to less than six per cent. of the capital stock, the tax will be at the rate of three mills upon each dollar of valuation of the capital stock. If there shall be more than one kind of stock, and on one a dividend of six per cent. or over shall have been declared, and on the other no dividend or a dividend of less than six per cent. shall have been declared, the rate shall be one half mill on the capital stock for each one per cent. dividend declared in the first case, and three mills on each dollar of valuation in the second case. When a company has made a profit and added it to its sinking fund without dividing it among its stockholders, such profit will be taxed accordingly. All limited partnerships engaged in business in the State, no matter where organized, are made subject to the provisions of the act. For the purpose of taxation, the interests in limited partnerships are to be deemed capital stock, and any division of the profits among the owners of such interests are to be taxed as dividends. The provisions governing limited partnerships, however, are not made to apply to those organized for manufacturing or mercantile purposes. All companies and limited partnerships engaged in the business of transporting freight or passengers, and all the telegraph, express, and palaces and sleeping-car companies, incorporated and unincorporated, doing business in the State, are required to pay a tax of eight tenths of one per cent. upon the gross receipts of their business on July 31st and January 31st in each year. Where such companies are engaged in mining, purchasing, and selling coal, the receipts derived from the sale of such coal are not to be taxed, but an account of the coal so dealt in must be kept, and the company must charge itself with the transportation thereof at the same rates which are or would have been charged to other companies or individuals for transportation of similar freight; and the sums so charged for transportation are to be taxed as a part of the gross receipts. Insurance companies—excepting those based upon the purely mutual plan—are required to make semi-annual reports, sworn to by the proper officers, and showing the amount of premiums received during the previous six months, whether in cash notes or other substitute for money, and they shall pay a tax of eight tenths of one per cent. upon the gross amount of such premium. All companies owning and operating coal-lands are required to report every six months the amount of coal mined by them, or by other companies or individuals under a

lease or other contract from such companies, and also the amount of coal not mined which shall have been purchased by such companies. The act further provides that such coal companies shall pay a tax of three cents upon each ton of coal of 2,240 pounds, mined or purchased, until July 1, 1880, and one cent upon each ton until July 1, 1881, after which time the tax on coal shall cease. The coal consumed by the company producing it is not to be taxed. All private bankers and brokers, unincorporated banking institutions, etc., and all incorporated companies except those liable to a tax on their capital stock or gross receipts, are to make annual statements of their net earnings from all sources. A tax of three per cent. upon such net earnings is to be imposed in addition to the taxes otherwise imposed by the act. All taxes which remain unpaid after the time provided for their payment will bear interest at the rate of twelve per cent. per annum until their settlement. The taxes are made a lien on all the property, real and personal, of the corporations or limited partnerships taxed, and are to take precedence of all claims, incumbrances, or liens arising after the passage of the act. No corporation or limited partnership liable to taxation under the act can be dissolved by decree of court until all taxes have been paid and a certificate of that fact filed in the proper court. All foreign corporations, except insurance companies, are required to obtain an annual license from the Auditor-General to have an office in the State, for which they shall pay one fourth of a mill on each dollar of capital stock which they are authorized to have. For a failure to pay such tax a penalty of fifty per cent. is to be imposed. No license, however, will be required for corporations paying a tax under other provisions of the act, or whose capital stock or a majority thereof is owned or controlled by a corporation of the State which does pay a tax under other provisions of the act. All mortgages, debts due from solvent debtors, except notes or bills for work or labor done, all obligations given to banks for money loaned and bank-notes, all shares of stock in any bank or savings institution incorporated in the State, all public loans or stocks except those of the State or of the United States, all money loaned or invested on interest in any other State, and all moneyed capital in the hands of individual citizens of the State, are to be taxed for State purposes, at the rate of four mills on every dollar of the value thereof, annually. All mortgages, judgments, and moneys due on agreement to sell real estate are exempted from taxation except for State purposes; and all corporations paying interest on loans taxed for State purposes only shall deduct the tax from such interest, and pay the same into the State Treasury. Where a bank elects to collect annually from its stockholders a tax of six tenths of one per cent. of the value of the shares of such bank and pay it over to the State Treas-

sure, the shares, capital, and profits of such banks shall be exempt from all other taxation.

The expectation that ex-President Grant would during the summer arrive at San Francisco on his return from an extensive tour in Europe and Asia, led to the adoption of a resolution for the appointment of a joint committee of ten Senators and fifteen Representatives to act in conjunction with the Governor, Lieutenant-Governor, and Speakers of the Senate and House of Representatives, for the purpose of welcoming him upon his arrival in this country, in the name of the Commonwealth of Pennsylvania, provided that there should be no expense to the State. It was passed in the House by a strict party vote, 79 yeas and 73 nays; also in the Senate by yeas 26, nays 12.

A bill was introduced in the House to appoint a commission to ascertain and adjust the losses caused by the riots of July, 1877, and to provide for their payment. It was referred to the Committee of Ways and Means, and reported back with amendments which were adopted. The bill thus amended appropriated \$4,000,000, or as much thereof as might be required to pay the losses. One fourth of the amount of the loss was to be paid into the State Treasury by the county of Allegheny. The Governor was authorized to appoint three commissioners to ascertain the value of the property lost by the respective claimants, and the method was prescribed in which the requisite proofs should be presented. After all claimants were heard the commissioners were required to file with the State Treasurer their report, which should contain the names of all the claimants whose property was destroyed or injured, and the amount of loss suffered by each. If the county of Allegheny failed to pay the twenty-five per cent. of the losses within a certain time after the assessment, claimants were to receive out of the appropriation by the State but seventy-five per cent. of the amount of their claims, and the county should remain liable to the claimants for the balance. When the report of the commissioners was filed in the office of the State Treasurer, that official was to issue to each claimant a certificate setting forth the amount adjudicated in his favor. Upon presentation of this certificate to the Governor he should issue a warrant for the amount payable to the holder or his assignee, who should immediately present it to the State Treasurer. If there were no funds in the Treasury for payment, the State Treasurer should mark the date of presentation, and by publication inform the holder when funds were in the Treasury for payment. The members of the commission were each to receive ten dollars a day for every day occupied in their duties, with their necessary expenses, including clerk-hire.

This bill caused more excitement than any other subject which was brought forward. The question of the liability of the State for

damages caused by riots and the violence of a mob was extensively discussed. The advocates of the bill urged that Allegheny County was not liable for the losses under the laws of 1841 and 1849, which make cities and counties liable for riotous losses, on the ground that these disturbances of 1877 were general and not local, and that the State was constitutionally liable for the restitution of property lost through general riot and mob violence. A decision was cited, proving that any property damaged or destroyed while being used as a barracks or while in possession of State or national authorities, and destroyed by the enemy, should be paid for by the State or nation. The Pittsburgh round-house was an exactly parallel case. It was further urged that it was no riot, but an insurrection, brought about by suffering from depression occasioned by the panic. As soon as the proclamation of the Governor was issued calling out the troops to suppress the insurrection, the State assumed control and responsibility, and this was done before a shot was fired or a torch was lighted. The State was therefore liable in equity, and was morally bound to pay for the damage occasioned by the mob at that time. In 1864 a law was passed commanding the State militia to suppress any invasion or insurrection that might occur within its borders. This was carried into effect by the military acting under the command embodied in the Governor's message. This proved clearly the responsibility of the State for the losses occasioned by said insurrection.

In reply it was said that the Government did not become a general insurance company for the restitution of property destroyed by incendiarism or lawlessness; it was only responsible for the punishment of the incendiary or rioter. The Government only protected property; it did not pay for it when destroyed. The State is not responsible in any case. Riots are always local in their character. New York, New Jersey, Maryland, Missouri, California, and Wisconsin place the responsibility on cities and counties. Maine, Massachusetts, New Hampshire, Kansas, and South Carolina place the responsibility on cities and towns. Local disturbances, as a general thing, are always the cause of riots. No county should seek to evade the law which makes it responsible for these damages. The law making Allegheny County responsible for damages occasioned through riots was asked for by the members from Allegheny County, backed up with petitions from the citizens of that county, in 1849. The people of Allegheny County were now endeavoring to be freed from the liability imposed by a law for which they had asked. The advocates of the bill then strengthened their position by urging that there was involved a principle of equity in the case. It was asserted that the State, which draws five sevenths of her revenues from the taxation of private corporations, should afford them pro-

tection and indemnity when assailed by lawless violence; also, that common sagacity would suggest that the State, instead of sturdily refusing indemnity, should be ready and willing to afford the amplest protection and indemnity to corporations which pay into her Treasury the largest part of the revenues for the support of her government, her charitable institutions, and her schools. The railroad company which is the principal loser in the Pittsburgh riots pays into the State Treasury little less than a million dollars a year. Under the present system of taxation, with the receipts of the company increasing, the amount will soon be considerably over a million. It seems, therefore, that obligations and duties should be reciprocal. When a State levies this amount of revenue from a corporation, it should receive indemnity when its property is destroyed through the failure, or neglect, or inability of the authorities of the State to give protection. The obligations should not be all on one side.

A motion to indefinitely postpone the bill was carried by a vote of 103 to 96. The question on the motion to reconsider this vote was first temporarily and then decisively postponed.

Meantime, during the debate on the bill, one of the members of the House asserted positively that "at least two members of the House of Representatives had been approached in a corruptive manner and had been subjected to corruptive powers." This led to the adoption of a resolution for the appointment of a committee to investigate the charges, "and any other improper influences brought to bear upon members in connection with the bill." One of the first witnesses examined by the investigating committee was Mr. W. H. Kemble of Philadelphia. He stated his occupation to be "president of a bank and of a railroad company." The following is an extract from a report of the investigation, and contains a definition of legislative log-rolling:

Q.—Have you, directly or indirectly, offered any money or thing of value, testimonial, privilege, or personal advantage to any member of the General Assembly to influence him in his official action on House bill No. 103, commonly known as the riot bill? A.—No, sir; unless you interpret the common aid that one man gives to another in legislation as "personal advantage."

Q.—Will you please state what you mean by the common aid which one man gives to another? A.—I mean this, that if you mean to ask me whether I ever promised to help A in legislation in return for A helping me in legislation, without any money consideration or thing of value, I can't say that I never have; but if it is a money consideration or anything of the kind which the world regards as bribery, I say no. I mean by that this: that I have never offered any man a bribe, directly or indirectly; but the language of the Constitution goes far beyond what any man that ever came to Harrisburg ever lived up to or ever will live up to. I was a friend of the bill, and did all I could for it in an honorable way.

To the next question, as to whether he had personal knowledge of any member having solicited any money, etc., with a view to his official action being influenced thereby, Mr. Kemble said, "No, always excepting the

exceptions which I make." "By what you call log-rolling?" said Mr. Wolfe. "Yes," was the reply, "that's it; always excepting that." Being asked to define "log-rolling," he said: "It is what I regard as higher than all constitutions, that one good turn deserves another; that is all there is of it in passing bills, which, if a man don't do, he may as well stay away from Harrisburg, and yet the strict interpretation of the Constitution prohibits it."

To the question, also, as to personal knowledge of any member having demanded or received, or consented to receive, etc., he answered: "None whatever, except common log-rolling. I tried to log-roll with everybody, so far as that is concerned. I don't deny that."

The report of the committee was made on May 29th. After reciting the resolution directing the investigation, the committee state that the rules which guided them in their conclusions as far as practicable were the same as those which govern the courts. Irrelevant testimony was submitted, but it did no harm to any one. Conflicting testimony was also taken, but they were guided by the reasonable and consistent circumstances. No attempt was made to impeach any witness. In making up the report the committee endeavored to rid their minds of prejudice and passion. They report W. F. Rumberger of Armstrong County, E. J. Petroff of Philadelphia Fifth District, and George F. Smith of Philadelphia Twenty-fifth District, guilty of a violation of section 30, Article III, of the State Constitution, and of the act of Assembly of 1874 defining corrupt solicitations of members, etc. William H. Kemble, ex-member Charles B. Salter of Philadelphia, Jesse R. Crawford of Blair, A. W. Leisenring of Carbon, and Christian Long of Cumberland are found guilty of the same. The committee say there is a considerable mass of evidence showing attempts at improper combinations upon other legislation pending before the House or to be brought before it, in order to further the passage of the riot bill. While these combinations or attempted combinations may not have been such as would render the parties concerned therein criminally liable, yet they have been of such a character as to be antagonistic to pure and wise legislation, to the spirit if not the letter of the Constitution, and to the best interests of the Commonwealth. They find that the public press was not subsidized, but that attempts were made to influence public opinion through the insertion of paid articles in the papers.

Without waiting to accept the report of the committee, separate resolutions were offered in the House to expel each of the members against whom charges were made in the report. Each resolution failed to pass by the constitutional majority of two thirds. The votes for expulsion were as follows: on Petroff—yeas 98, nays 88; on Smith—yeas 88, nays 79; on Rumberger—yeas 104, nays 69. A resolution was also adopted to appoint a committee on the part of the House to commence criminal proceedings against William H. Kemble, Charles B. Salter of Philadelphia, Isaac R.

Crawford, assistant superintendent of public grounds, of Blair County, A. M. Leisenring of Mauch Chunk, and Christian Long of Cumberland County, or such of them against whom they may be satisfied there is sufficient evidence, in the Court of Quarter Sessions of Dauphin County, and that the Attorney-General is requested to lend them such aid as they need in conducting said prosecution. This ended the action of the House relative to the report of the committee.

The following preamble and resolution relating to special schools of instruction were offered in the Senate and adopted:

Whereas, It is the opinion of this body that it is the duty of the State to adopt such measures as will promote the variety and value of her productions, and to foster the establishment of industrial and technical schools having for their object the practical education and training of the boys and young men of this Commonwealth in the mechanic arts and sciences, believing, as we do, that the practical result of our present system of education is to direct the attention of boys and young men too much in the direction of the learned professions, to the great neglect and detriment of the mechanic arts and skilled industries; and,

Whereas, It is believed that the enormous magnitude of the production of iron in the State demands the establishment of a limited number of schools wherein shall be taught theoretically and practically the manufacture of all kinds of articles made from iron and from iron steel: therefore, be it

Resolved by the Senate, That a committee of ten be appointed, consisting of five Senators to be appointed by the President *pro tem*, and five practical and scientific mechanics to be appointed by the Governor, whose duty it shall be to examine the matters in the foregoing preamble, and report to the next Legislature such facts as they may deem necessary, together with their opinion as to the advisability and policy of establishing such institutions as are therein mentioned.

A supposed over-issue of \$5,000,000 State bonds in 1852 and 1853 was found upon investigation not to be correct.

The committee of the House appointed to investigate the affairs of the State Agricultural College reported that the institution had been very badly managed; that its location was a very undesirable one; that the building was entirely unsuited for the purpose for which it was erected; that the agricultural department, which was intended to be the leading object of the institution, had never been a success; and that the State had never received and is not now receiving benefits at all commensurate with the amount of money which had been appropriated to said institution by the United States and the State. The Congress of the United States granted to the State 780,000 acres of land, which by bad management netted the State only \$439,000. The act of Congress granting this vast amount of land required that the proceeds thereof should be used by the State mainly in the interest of agriculture and the mechanical arts. The interest accruing from this fund, in addition to some \$400,000 appropriated by the State Legislature, was used and controlled by the trustees

of said Agricultural College. In addition the trustees aforesaid hold the bond of the State bearing six per cent. interest, dated February 2, 1872, calling for \$500,000, and falling due fifty years from date, from which they derive a revenue of \$30,000 annually. The evidence disclosed the further fact that the deeds for all the freehold belonging to the Pennsylvania State College, including the experimental farms, were held by the trustees, not in trust for the Commonwealth but for themselves and their successors. The committee also found that the experimental farms owned by the trustees, which were to be conducted solely in the interest of the agricultural class of the Commonwealth, have utterly failed to accomplish the object intended. This is notably so in the case of the western farm located in Indiana County, which is not now a third-class farm nor in as good condition as when purchased. At the present session of the college but forty-six students are in attendance, many of whom are non-residents of the State, and there are now in the employ of the college eleven professors, which is out of all proportion with the number of students in attendance. The committee is of the opinion that the trustees have signally failed to carry out the object for which the magnificent land-grant was given by the United States, and which was further sought to be accomplished by most liberal appropriations on the part of the State. The report was received, and a resolution adopted instructing the Treasurer to pay no more money to the college until it was shown that the laws under which it existed were faithfully executed.

A vast amount of local business was transacted, and the Legislature adjourned on June 4th.

The railroad question has perhaps greater prominence in Pennsylvania than in other States. Complaints were formally made to the Governor in 1878 of undue and unreasonable discrimination in charges and in facilities for transportation of freight over the lines of certain transportation companies. Under his directions such legal proceedings were instituted to redress any such wrongs to shippers as were within the reach of judicial remedy. The transportation of oil was the chief cause of complaint. One company aimed at the purchase and refining of the whole product of the State, and had reached such a point of success as to dictate its own price in the purchase of the oil, and to secure from railroads its own terms of transportation. The greatest relief from the oppression of this monopoly was, however, obtained by the producers of oil, by the construction of a line of pipe along the surface of the ground through which the oil might flow from the wells to an independent line of transportation. This line was constructed from Bradford to Williamsport, a distance of 233 miles. (See "Annual Cyclopaedia" for 1878, page 682.) The work of con-

struction was commenced in February and completed in May. The line starts at Williamsport and runs slightly north of west over the mountains into Potter County, and on to Coryville, or Frisbie, the initial point, in McKean. It passes over a high range of mountains near the little village of Waterville, at the forks of Pine Creek, and it was found very difficult to lay the line at this point. In several places the sides of the mountains were so steep that the pipe had to be let down with ropes to be placed in position. The distance, according to the figures of the chief engineer, is just 100 miles; and as the pipe is six inches in diameter, it requires nearly 28,000 barrels of oil to fill it, reckoning 41 gallons to the barrel. There are tanks at Coryville and a pumping station. The next pumping station is at a point about four miles from Coudersport. The distance from Coryville to pump-station No. 2 is $22\frac{1}{2}$ miles; from there to Williamsport is $77\frac{1}{2}$, and the oil, when raised 1,200 feet at the summit, runs down to Williamsport of its own gravity, as the fall is 2,100 feet. The pumping-engines are forty-horse power each, and each has an equal share of the lifting to do in the way of the application of power. The last joint of pipe having been laid, and everything in readiness, the engine at Coryville was started on the 28th of May, at four o'clock in the afternoon, and the first oil was forced through the pipe in the direction of the pump-station in Potter County, $22\frac{1}{2}$ miles distant. The pipe is of such a flexible character that it readily adjusts itself to the formation of the ground, except where very sharp turns had to be made, and then short joints, sharply curved, were used. The engineer says that the flexibility of the pipe allows it to deflect at least fifteen feet in one hundred. Every joint has been carefully tested by subjecting it to hydraulic pressure, and but little trouble is apprehended. Joints are liable to burst, however, in which case the pumps would have to be stopped, and considerable oil would be lost before the break could be repaired by putting in a new joint. At Williamsport tanks had been constructed to hold 60,000 barrels, and trains prepared for its constant transportation to tide-water. The capacity of the pipe was 250 barrels per hour, or about 6,000 barrels per day. The first shipment by cars was made on June 7th. Over sixty iron tank-cars were filled. These cars carry 100 barrels each, and about 6,000 barrels were loaded. The siding which has been laid by the Reading Railroad Company for the oil-cars is 2,700 feet in length, and thirty cars can be filled in a very few minutes, so complete are the arrangements. The pipe conducting the oil from the tanks is eight inches in diameter and about one mile in length. At the siding another pipe of the same size runs parallel with it for a sufficient distance to cover fully thirty cars, and there is a stand-pipe opposite each car, which is so curved that the oil flows into the dome in a

steady stream. As the tanks are more than 200 feet above the level of the siding, the oil flows with great force. It is thus seen that the facilities for shipping are excellent, and comparatively little time is lost in filling a whole train.

The reports of thirty-eight of the railroad companies of the State for the year 1878 represent the aggregate earnings at \$132,168,389, against \$127,936,695 in 1877. The increase is about 3·3 per cent. Twenty-four roads have reported their earnings for four years, and show in 1876 an increase of 3·1 per cent. over 1875; in 1877, 0·8 per cent. over 1876; and in 1878, 4·1 per cent. over 1877. The increase in 1878 was larger than in the preceding years. From 1875 to 1878 the increase was about 8·2 per cent. A general decrease in expenses is also shown.

The druggists of the State, although exempted as regular apothecaries from license-fees, have been held by the decisions of several local courts to be liable as vendors of patent medicines to pay such fee.

Many questions respecting the legal liabilities of municipal corporations have arisen out of the failure of the city of Williamsport to pay the interest on its bonds. The city was authorized by express grant of the Legislature to issue bonds to the amount of \$200,000. The total of bonds issued, however, amounted to \$645,000. It was urged on behalf of the city that all of these bonds in excess of \$200,000 authorized by the Legislature were illegal and void, inasmuch as no power existed for such action on the part of the municipal authorities. On this point the Supreme Court held, by a majority of one (Justices Agnew, Woodward, and Sterrett dissenting), that when a municipality has lawfully created a debt it has the implied power, unless restrained by its charter or a statute, to evidence the same by bill, bond, note, or other instrument. The Court held that the act of the Legislature did not limit the implied authority of the city of Williamsport to issue bonds for municipal improvements. This decision has been disputed as unsound in other States, and as throwing the door wide open for a wholesale issue of bonds.

On the part of the city it was shown that a portion of the bonds issued in excess of the \$200,000 expressly permitted by the Legislature (\$123,339) were not authorized by Councils; that 67 of the \$1,000 bonds were issued for "unknown purposes," and that 183 were for "persons unknown" and for "purposes unknown." The opinion of the Court did not notice or distinguish that the validity of a portion of the bonds in dispute rested on evidence going to show that they were issued fraudulently. At the close of the argument, however, the Court stated that it was not meant "to deprive the city of any special defense to any particular bond or bonds." In dissenting from the majority of the Court, Judge Agnew said: "The citizens of Williamsport find them-

selves involved in a debt of \$645,000, none of which can be contested, when they find their way into the hands of *bona fide* holders for value, if the power to issue this amount be sustained, whether they be legitimate or illegitimate. Here it is that the doctrine of the opinion does a great wrong. It sustains the illegitimate as well as the legitimate issues, on the ground that the implied power to issue them exists, and with this *ægis* covers the entire sum." Has a municipal bond the attributes of commercial paper? is a question which did not entirely escape notice. Judge Agnew says, in his dissenting opinion: "That logic is false which deduces from the power of a mere municipal corporation . . . a power on the part of such a corporation, created by law for governmental purposes, to issue commercial paper . . . negotiable according to the law merchant or general usage. . . . This is not a municipal power. It flows from no relation of the citizens to the corporation. They are not stockholders, nor partners, nor associates, but are a portion of the people, living under a local government for certain local purposes. *The officers of a municipal corporation are not the agents of the people.*"

A case involving the liability of a municipality for the condition of its thoroughfares came before the Supreme Court. The action grew out of injuries sustained at Pittston. The plaintiff's son was driving his horse and wagon through the main street, which is sixty feet in width, but narrows at a mill which it passes. At this narrowing a perpendicular wall descends to the tracks of a railroad, but there is no abutment or guard of any kind at the edge of the road. The horses of the plaintiff took fright as a train approached, and they, with the wagon, were precipitated to the track below. The boy was hurt, one horse was killed, another injured, and the wagon destroyed. The Court said:

It is true that, without the frightening of the horses, there would have been no accident; but the horse is naturally a timid animal, and is so liable to fright that those having charge of the public highways ought to make reasonable provisions for a matter so common and so likely to happen at any time. Horses abound, but horses that never frighten or are never fractious are exceedingly rare; and, if roads were to be constructed only for such animals, there must need be but little traveling upon them. We think it was well said, in the case of Lower Maconing Township *vs.* Merkhoffer (21 P. F. S., 276), that it was no defense that by careful driving the accident might have been avoided, since that would fall far short of the purpose of a public highway. In the case of Newlin township *vs.* Davis (27 P. T. S., 317), the accident occurred through the fright of a horse upon a bridge unprotected by side-railings; but it was not, in that case, pretended that the omission of such railing was not *per se* neglect, nor that the fright of the horse relieved the township of liability. Now, it is hard to understand why a precipice at the side of a narrow street does not require fencing quite as much as the sides of a bridge. We can readily understand and excuse the want of precautions of this kind in wild and sparsely settled portions of the State, for the finances of the townships are exhausted in the making of roads even of an inferior character; but we can neither understand nor

excuse the motive of a borough of ten thousand inhabitants in refusing to properly guard a place on its main thoroughfare so dangerous as that now under consideration, especially when the expense of so doing would be but trifling. In the present case there is certainly, then, but little, if any, doubt but that the negligence of the borough authorities was the direct cause of the accident complained of, with its resulting damages.

Criminal proceedings were commenced against the persons reported as having attempted to bribe members of the Legislature. Bills of indictment were found against them, but the trial was postponed.

By another decision of the Supreme Court, the liability to taxation of sectarian and other asylums was affirmed. A Protestant Episcopal church had established an orphan asylum. The law of Pennsylvania exempts from taxation public charitable and educational institutions. The Supreme Court held that this orphan asylum, being generally limited to the reception of the orphan children of Episcopalian parents, is not a "public" charitable institution within the proper meaning of the statute, and hence is liable to taxation. The Court also held that, though the asylum sometimes received orphans not of Episcopalian parentage, yet the main object of the asylum was not a "public" charity, but to advance the particular interests of one religious denomination; hence it was not a "public" charitable institution within the meaning of the statute, and is liable to taxation. In illustration of the decision, the opinion of the Court intimates that if Girard College should open its doors only to one denomination or class of persons, it would not be a "public" educational institution, and would be liable to taxation; or if the Pennsylvania Hospital should refuse to receive any but Protestants, or any but Roman Catholics, it would cease to be a "public" charitable institution, and would be liable to taxation.

An election was held on November 4th for the choice of a State Treasurer and the State Legislature.

The State Temperance Convention assembled at Harrisburg on April 24th, attended by 346 delegates from 39 counties and 7 cities. Felix R. Brunot of Pittsburgh was chosen President. A series of resolutions was adopted, which requested the Legislature to change the policy of the State from that of license and regulation to that of prohibiting the manufacture and sale of intoxicating liquors for public drinking purposes; that all males and females over twenty-one years old be clothed with legal power to vote on a duly framed law for prohibiting the traffic in liquors; that each candidate for office be interrogated before and after nomination as to his view of a temperance law, and, if unfavorable, that he be regarded as unfit to represent the people; that the Legislature authorize the appointment of a commission to investigate the alcoholic liquor traffic. A law was framed prohibiting the sale and manufacture

of liquors, which will be submitted to the Legislature when in session.

The National Greenback-Labor party assembled in State Convention at Altoona on July 15th. In the permanent organization Samuel R. Mason was made President. For State Treasurer, Henry C. Baird was nominated and declined; Peter Sutton of Indiana County was then nominated. The following series of resolutions was then adopted:

The National Greenback-Labor party of Pennsylvania, in convention assembled, declare:

1. That it is in favor of the payment of the national debt strictly in accordance with the stipulations of the contract under which it was created, and that no more interest-bearing bonds of the Federal Government be issued.

2. That the Federal Government only shall issue money; that such money shall be a full legal tender, and that full legal-tender greenbacks shall be substituted for national-bank notes.

3. We demand, for the sake of economy and convenience, that the trade-dollar and fractional silver coin be replaced by fractional paper currency.

4. We demand the repeal of all laws that foster inequality in condition and opportunity, as they are in violation of universal justice.

5. We demand the enactment of an income-tax law, with heavy penalties for perjury in its violation, and that said tax be graduated in proportion to income.

6. That all debts due for labor performed take precedence of all other claims.

7. That we demand the passage and approval of an act abolishing the store-order or truck system, and compelling the payment of all wages due laborers at regular stated rates, and in the lawful money of the United States.

8. That we demand the passage and enforcement of such laws as will prevent all combinations, discrimination, or the granting of rebates by transportation companies, and compel common carriers to furnish the service for the same price to all men.

9. We demand that no more public lands be voted to corporations, but that they be held for actual settlers.

10. We demand that education shall be free and industrial, and no child shall be allowed to grow up in ignorance.

11. We demand that there shall be a contraction in official fees and salaries to correspond with the reductions of incomes in other directions; that there shall be a specific tariff placed on all raw materials produced here for the protection of American industry; that the hours of labor shall be reduced to eight hours per day; that the contract system of labor in our prisons and reformatory institutions shall be abolished.

12. We denounce any attempt at coalition with any other party; we favor the establishment of national and State labor bureaus.

The Democratic State Convention assembled at Harrisburg on July 16th. A. H. Cofroth was appointed permanent chairman. D. O. Barr of Pittsburgh was nominated for State Treasurer. The following resolutions were reported by the Committee on Resolutions:

1. That we, the Democratic party of Pennsylvania in convention assembled, renew our vows of fidelity to the fundamental principles proclaimed and practiced by the illustrious men who settled our free institutions and founded the Democratic party to protect and preserve them.

2. That the just powers of the Federal Union, the rights of the States, and the liberties of the people are vital parts of one harmonious system; and to save

each part in its whole constitutional vigor is to "save the life of the nation."

3. That the Democratic party maintains, as it ever has maintained, that the military are, and ought to be, in all things subordinate to the civil authorities. It denies, as it ever has denied, the right of the Federal Administration to keep on foot at the general expense a standing army to invade the States for political purposes without regard to constitutional restrictions, to control the people at the polls, to protect and encourage fraudulent counts of the votes, or to inaugurate candidates rejected by the majority.

4. That the right to a free ballot is the right preservative of all rights, the only means of peacefully redressing grievances and reforming abuses. The presence at the polls of a regular military force and of a host of hireling officials, claiming the power to arrest and imprison citizens without warrant or hearing, destroys all freedom of elections and upturns the very foundation of self-government. We call upon all good citizens to aid us in preserving our institutions from destruction by these imperial methods of supervising the right of suffrage and coercing the popular will; in keeping the way to the ballot-box open and free, as it was to our fathers; in removing the army to a safe distance when the people assemble to express their sovereign pleasure at the polls; and in securing obedience to their will when legally expressed by their votes.

5. That Rutherford B. Hayes, having been placed in power against the well-known and legally expressed will of the people, is the representative of a conspiracy only; and his claim of right to surround the ballot-boxes with troops and deputy marshals to intimidate and obstruct the electors, and his unprecedented use of the veto to maintain this unconstitutional and despotic power, are an insult and a menace to the country.

6. That the Democratic party, as of old, favors a constitutional currency of gold and silver, and of paper convertible into coin.

7. That we are opposed to the system of subsidies by the General Government under which, during the period of Republican ascendancy, political rings and corporations profited at the people's expense, and to any appropriation of the public moneys or the public credit to any object but the public service. The reforms and economies enforced by the Democratic party since its advent to power in the Lower House of Congress have saved the people many millions of dollars, and we believe that a like result would follow its restoration to power in the State of Pennsylvania.

8. That the Democratic party, being the natural friend of the workingman and having throughout its history stood between him and oppression, renews its expression of sympathy for labor and its promise of protection to its rights.

9. That we look with alarm and apprehension upon the pretensions of the great transportation companies to be above the fundamental law of this Commonwealth which governs all else within our borders; and until they accept the Constitution of 1873 in good faith, they should remain objects of the utmost vigilance and jealousy by both Legislature and people.

10. That the recent attempt, under the personal direction of ruling Republican leaders, to debauch the Legislature by wholesale bribery and corruption, and take from the Commonwealth four millions of dollars for which its liability had never been ascertained, is a fresh and alarming evidence of the aggressiveness of corporate power in collusion with political rings, and should receive the signal condemnation of the people at the polls.

11. That the present condition of the State Treasury, a bankrupt general fund, and even schools and charities unable to get the money long since appropriated to their support, is a sufficient illustration of the reckless financial mismanagement of the Republican party.

From the minority of the committee the following resolutions were then offered as a substi-

tute for the resolution relating to the national finances :

That the power to issue paper money as well as coin is the exclusive right of the General Government, and as the charters of the national banks expire the Government should substitute for their circulation legal-tender Treasury notes, redeemable in coin, and receivable by the Government for all dues at their par face value.

That the coinage of silver should be on the same terms and conditions as gold, and all coins of the same denomination should be of equal value; that the restoration of silver to a perfect equality with gold, both as coin and bullion, is by the dictates of justice and wise statesmanship immediately demanded.

This motion was lost, and the platform was then adopted.

The Republican State Convention assembled at Harrisburg on July 23d. Galusha A. Grow was made permanent Chairman. Samuel Butler of Chester County was nominated for State Treasurer. The following resolutions were then adopted :

1. That the Republican party, again forced to stand forward for the defense of human rights, after a struggle lasting through a generation, finds itself confronted by the same foes of Federal unity, political freedom, and national honor, which it has so often overthrown in civil contests and in armed conflict.

2. That we appeal to the Union-loving people of Pennsylvania to arrest, by their votes, the mad career of the Democratic party, which insists upon placing the national Government under the domination of men who but lately fought to destroy it, and who are now plotting to give triumph to the doctrine they failed to establish in the field—the establishment of State sovereignty by the overthrow of national supremacy.

3. We declare our implacable hostility to the repeal of the national laws which protect the purity of the ballot-box and secure fair elections. The election of Congressmen and Presidential electors being clearly subject to national control, any attempt to throw off that control is simply an effort to establish fraud at national elections. Honest suffrage, equal rights, the unity of the nation, and the supremacy of the national Government in all matters placed by the Constitution under its control, can be maintained only by the Republican party, which is alone committed to their defense.

4. That the Democratic party, having committed itself to an attempt to break up the Government by refusing to appropriate moneys already collected from the people to sustain the Government, unless the Executive shall sanction measures intended to foster fraud, violence, and corruption in the national elections, and to impair the constitutional supremacy of the nation, deserves and invites the signal condemnation of every law-abiding and honest citizen.

5. That we are in favor of the discharge of the national debt in coin according to the understanding between the Government and the lender; of a paper currency redeemable in coin; and of the existing national banking system. We congratulate the country upon returning national prosperity, and upon the accomplishment, under a Republican national Administration, of the successful resumption of specie payments. Our currency, the best ever afforded the country, is restored to its par value; the national credit has been maintained and strengthened, and the burden of the national debt largely reduced. To complete what has been so well done, we demand that our present financial system remain undisturbed.

6. That to the policy and practice of protection to home industry and home production, inaugurated and sustained by the Republican party, we are indebted for the growth and development of our domestic and foreign commerce, and for the prosperous condition and

strength of the national finances; and that to the continuance of that policy must we look in the future for assured prosperity and peace throughout our whole country. In fostering the same we desire to insure constant employment to labor at remunerative wages.

7. That the firm stand of the President in vindicating the prerogatives of the coordinate departments of the Government meets the hearty approval of the Republican party of Pennsylvania.

8. We call on the veteran soldiers of the war for the Union to join us in resenting the unjust expulsion of their wounded comrades from offices by the Democratic Congress, and the transfer of their places to rebel soldiers, whose chief recommendation seems to be unrepentant treason and unending hate of the nation.

9. That we earnestly sympathize with our Southern Republican brethren, who are now passing under the harrow of political persecution. We bid them be of good cheer. Fraud and force can not always triumph, even in a region where fraud and force find a congenial home. If a solid South now deprives them of their just rights, a solid North will not fail, in due time, to secure them that perfect freedom which is the birthright and inheritance of every American citizen.

10. That the United States of America is a nation, not a league; its Constitution and all laws made in pursuance thereof are the supreme law of the land, anything in the Constitution or laws of a State to the contrary notwithstanding.

11. That the tribunal established by the Constitution to determine whether the laws are made in pursuance thereof is the Supreme Court of the United States. All laws once enacted, unless repealed by the law-making power or declared void by said Court, neither law-maker, citizen, nor State has a right to nullify.

12. That the success of the administration of the State under the management of the Republican party, the steady reduction of the State debt, and the enforced compliance of the present Democratic Treasurer that not one dollar of the public funds had been lost or misplaced during the seventeen years of Republican custody of the funds, prove that official integrity and financial skill have been the benefits conferred by our party on the tax-payers of the State, and merit the approval of the people of Pennsylvania.

13. That we pledge ourselves in favor of such legislation as will prevent unlawful and unconstitutional discrimination in freights by the carrying companies of the country.

The result of the election was as follows :

FOR TREASURER.

Butler, Republican.....	290,153
Barr, Democrat.....	221,715
Sutton, National.....	27,207
Richardson, Prohibition.....	8,219

The Legislature was divided as follows :

PARTIES.	Senate.	House.
Republicans.....	82	107
Democrats.....	16	77
Nationals.....	1	17

PERKINS, SAMUEL E., Chief Justice of the Supreme Court of Indiana, died at Indianapolis, December 17th. Born in Brattleborough, Vermont, December 6, 1811, he passed his youth on the farm of his adopted father, William Baker, in Conway, Massachusetts, attending the winter schools and devoting his spare hours to study. After reaching his majority he made efforts to complete his general educa-

tion, and then took up the study of the law, reading in the office of Thomas J. Nevans of Penn Yan, New York, and also with Henry Willis, afterward a Judge of the New York Supreme Court. At the age of twenty-five he proceeded to the newly opened West, intending to establish himself there. Starting for Indianapolis on foot, he found himself without money in Richmond, Indiana, where he remained, reading in the office of Judge Borden and passing his examination for the bar in the spring of 1837. Opening an office in Richmond, he supplemented his legal practice with writing for "The Jeffersonian," a recently established Democratic paper, of which he afterward became editor and proprietor, conducting it during the campaign of 1840, but not neglecting his practice in the mean time. In 1843 he was appointed prosecuting attorney for the Wayne Circuit. He was a Presidential elector on the Democratic ticket in 1844. In the winter of the same year he was appointed a Judge of the Supreme Court by Governor Whitcomb, but was not confirmed by the Legislature. After the adjournment of the Legislature, however, he was placed on the bench for the term of one year by the Governor. He made Indianapolis his residence from this period. He was continued on the bench until 1864, when the Democratic ticket was defeated. Besides his judicial labors, he compiled while serving as judge a digest of the Indiana reports, and wrote a standard textbook, "Perkins's Practice." He also taught as Professor of Law in the Northwestern Christian University. After his retirement from the Supreme bench he followed the practice of his profession until 1873, when he was appointed Judge of the Superior Court of Marion County, to fill the unexpired term of Judge Rand. He continued in this position, to which he was elected by the people the following year, until 1876, when he was again placed by the popular vote upon the Supreme Court bench, of which he was Chief Justice at the time of his death.

PERSIA, a country of Asia. Reigning sovereign, the Shah Nasr-ed-Din, who was born in 1831, and succeeded his father, Shah Mohammed, September 10, 1848. The heir apparent to the throne, Muzaffer-ed-Din, was born in 1854, and has two sons.

By the Treaty of Berlin Persia received from Turkey the town and territory of Khotoor, containing about 8,000 inhabitants. The total area of Persia is about 637,000 square miles, with a population of 7,000,000. At the end of July, 1878, Persia had 2,490 miles of telegraph lines and 4,782 miles of telegraph wire in operation. The number of telegraph offices was 56, the number of dispatches 665,000. The first regular postal service was opened in January, 1877.

The affairs of Persia begin to attract greater attention, not only on account of the reforms which it has of late begun to introduce, but especially on account of its relation to the

Eastern question. Schemes of an alliance between England and Persia, involving proposals for an annexation of western Afghanistan to Persia, were eagerly discussed in England, and warmly advocated by several statesmen. An important lecture on the subject was delivered in London on March 7th by General Sir F. Goldsmid. The lecturer maintained that Persia, with all her misgovernment and shortcomings, had great resources for a powerful army. Her army, numbering in bygone times 200,000, and now estimated to consist of 100,000 men, had been formed by British officers on the European model, and was now in the hands of an Austrian officer, a Russian colonel being also there. Persia, as an ally of England, had the elements of material usefulness, and it surely came within the province of Englishmen to impart to so old a kingdom, and one so replete with classical interest, some of the better things of modern civilization. The lecturer dwelt at length upon the importance of an alliance between Persia and England, in case of new difficulties between England and Russia. Sir Henry Rawlinson, who presided, bore testimony to the capacity for discipline which the Persians displayed, and spoke warmly of their powers of endurance and of their virtues of temperance and courage. He thought that a real, honest, and cordial alliance might be formed with Persia by England.

The reorganization of the Persian army under the direction of Austrian officers is proceeding satisfactorily. With the exception of the head-dress, the uniform of the troops is very similar to that of the Austrian army. The infantry wear blue coats or blouses with red facings, and gray trousers; the rifles, gray coats with green facings; while the dress of the artillery and cavalry is exactly like that of the same arms of the service in Austria. The Shah in 1879 visited and inspected some of the barracks—the first time such an event has taken place in the history of Persia—and afterward reviewed the troops.

The British Consul-General Abbott, in a report on the trade of Tabreez in the year 1877-'78, gives an unfavorable account of the commercial situation of Persia. The war between Russia and Turkey arrested the trade between Tabreez and Trebizond, and rendered the route from the Persian frontier of the Aras to the Caucasus impracticable for the transit of merchandise; and, besides the great difficulties thus thrown in the way of importers of English manufactured goods, the exchanges were very much against them. The rates of transport between Trebizond and Persia rose to more than double what they had been before the declaration of war. The consul observes that the excess of imports over exports, involving a continual drain of specie outward, threatens to produce most serious consequences. The Caspian provinces appear to yield less silk every year; and when it is considered that the prosperity of the foreign commerce of the

country chiefly depends upon that of the silk-trade to furnish returns for imports of merchandise from Europe, the conclusion is that Persia is drifting into a state of bankruptcy, which the effects of the late war must tend to accelerate.

PERU (REPÚBLICA DEL PERÚ). For territorial division, area, population, etc., reference may be made to the "Annual Cyclopædia" for 1873, 1875, and 1878, and to the article BOLIVIA in the present volume.

The President of the Republic, until December 18, 1879, was General Mariano Ignacio Prado, installed in office on August 2, 1876. The Vice-President was General La Puerta. The Cabinet, in May, 1879, was composed of the following Ministers: Interior, Señor Rafael Velarde; Justice and Public Worship, Señor Mariano Felipe Paz Soldan; Foreign Affairs, Señor M. Irigoyen; War and Marine, General M. Mendiburu (President of the Council); Finance, Señor J. M. Quimper.

In November General La Puerta, in charge of the Government during the absence of the President, who had taken command of the army in the south, formed a new Cabinet composed of his personal friends and political co-operators, as follows: Interior, Señor Buena-ventura Elguera; Justice and Public Worship, Señor Adolfo Quiroga; Foreign Affairs, Señor Rafael Velarde; War and Marine, General La Cotera (President of the Council); Finance, Señor J. M. Quimper. After the departure of General Prado from the country, which occurred on December 18, 1879, Colonel Nicolas de Piérola assumed the dictatorship. The President of the Supreme Court was Señor T. A. Ribeyro; the Postmaster-General, Señor F. de P. Muñoz; the Inspector-General of the Army, General M. Rivarola; and the Commandant-General of the Navy, Rear-Admiral A. de la Haza. The Peruvian Consul-General in New York is Mr. J. C. Tracy. The Archbishop of Lima is the Rt. Rev. Orueta y Cas-trillon.

For particulars concerning the peace strength of the Peruvian army, see the "Annual Cyclo-pædia" for 1878. In May last, after the outbreak of hostilities with Chili, the number of men under arms was raised to 40,000. The following statement concerning the Peruvian navy was published in December last: "The Peruvian fleet may be said to exist only in name since the combat of Punta Gruesa, in which the Chilean gunboat Covadonga occasioned the loss of the Peruvian ironclad Independencia, and the surrender of the monitor Huáscar and the gunboat Pilcomayo to the Chilean naval forces. Peru's only remaining effective war-vessel is the corvette Union, the old monitors Manco Capac and Atahualpa, built in the United States in 1863, being no longer fit for service otherwise than as floating batteries at anchor. Add the four steam transports, Limeña, Oroya, Chalaco, and Rimac (the only Chilean naval loss by capture in

the present war), and we have enumerated the entire Peruvian sea-force now in existence."

In the absence of official reports concerning the national finances, it can only be stated that the average revenue and expenditures are usually estimated at about \$60,000,000 and \$50,000,000 respectively. The revenue,* derived in part from the custom-house receipts, but chiefly from the sale of guano and nitrate of soda, having for many years past been insufficient to cover the expenditures (a large proportion of which has been for the construction of railroads and other useful public works), formidable annual deficits have become the invariable rule.

Peru has an immense national debt, the home branch of which is estimated at \$20,000,000, exclusive of a floating debt of unknown amount, greatly increased by extensive issues of paper money made in 1879 to carry on the war against Chili. In regard to the foreign debt, the following statement, from the pen of a Spanish-American writer, will be found interesting:

The foreign debt of Peru, according to the latest data obtainable, including the unpaid coupons from January, 1876, to July, 1879, amounts to £45,268,103 4s., or \$226,340,516, in coin, at five soles to the pound sterling. Since January, 1876, no interest has been paid, nor have any sums been provided for the amortization of this tremendous debt. At the commencement of the present year the interest on the consolidated debt—that is to say, the 6 per cent. loan of 1870, and the 5 per cent. loan of 1872 †—was reduced to 3 per cent. per annum, which reduced the half-yearly interest from £1,690,369 16s. to £659,244 4s. Notwithstanding this large reduction, no interest has been paid during the present year. A remarkable proposition has lately been made to the Government by the French section of the foreign bondholders. The character, advantages, and disadvantages of this proposition are briefly as follows: The principal of the foreign debt shall be reduced to 100,000,000 soles, coin, a gain to the state of \$69,036,980. No payment shall be exacted for interest now overdue, which represents another gain to the republic of \$57,300,536; these items providing for the extinguishment of a total claim against Peru amounting to the immense sum of \$126,340,516. The bondholders will pay the Government for the guano delivered alongside their ships, at the rate of 210s. per ton in coin, or in bills on London at ninety days, on presentation of the receipt of the captain countersigned by the general agent of the society. On the delivery of the guano at the port of destination a further sum of 210s. per ton will be paid in bonds of Peru at their nominal value; or in other words, the Government accepts payment of a certain portion of the value of the guano in its own bonds, and provides to that extent for the amortization of its debt. The Government will be at no expense on account of interests or commissions, and will receive on the acceptance of the terms of the proposition certain advances in the character of a further loan. The society of bondholders will have the sole right to fix the price of the guano, and to sell the same in its native state, or mixed or manipulated, in the markets of Europe. The Government will transfer to the bondholders its rights of proprietorship in the deposits of guano existing in the republic of Peru, and on that account the bondholders are the only parties who have the right to extract guano, and to sell it in the markets of Europe. In virtue of these

* See "Annual Cyclopædia" for 1873, p. 657.

† The 1870 and 1872 loans are secured on the guano deposits principally.

rights the bondholders may embargo and sequester all guano imported or sold in Europe without their authorization or consent. In case the deposits of guano should be exhausted before the complete amortization of the debt as at present constituted, or the quality become so inferior as to leave a loss by its manipulation and sale, the Government shall cede its rights to all its nitrate properties, to be handled in the same way and for the same purposes by the bondholders, always understanding that the latter will respect any obligations which the Government may have previously incurred on their account. The Government is also prohibited from paying any debt of the state whatever by means of deliveries of guano or nitrates, which is not in accordance with the terms of this convention. The bondholders will syndicate their claims, and will form themselves into a civil society for the development of the guano interests of Peru, according to the laws of France or England. By this instrument the Government is to recognize the jurisdiction of European tribunals, simply and exclusively, in everything relative to the interpretation and execution of the present contract, and the Government resigns all pretensions or claims which may be contrary or prejudicial to the enjoyment or exercise of the rights and privileges inherent to the transfer of titles to the proprietorship of the guano deposits or nitrate industries of the country; so that in effect, by the acceptance of the terms of the present proposition, the Government may enjoy a revenue of £750,000 per annum, and provide for the amortization of their debt at the rate of £375,000 per annum, with certain advances promised instead of those which the Government now enjoys under its present contract, and an amazing discount on the entire debt, with the sole obligation of losing the proprietorship of their fast-failing guano deposits, and possibly their nitrate-works, and all right of claim before their own courts in case of disagreement with the contractors.

The exports are estimated at the average annual value of \$50,000,000, and the imports at considerably less. Of the three chief articles of export, guano, cubic nitre, and sugar, the two former are government monopolies. The exports of sugar have more than doubled within four years. The value of the exports to the United Kingdom in 1878 was \$26,161,525, against \$23,482,510 in the year immediately preceding; and that of the imports from the same at \$6,849,155 in 1878, against \$6,331,970 in 1877. The subjoined tables, from the report of the United States Consul at the port of Callao, show the amount of trade between that port and the United States in the year ending October 1, 1878:

EXPORTS FROM CALLAO TO THE UNITED STATES.

Guano.....	\$961,840
Nitrate of soda.....	69,300
Cochineal.....	10,185
Hides and skins.....	5,802
Wines, liquors, etc.....	587
Firearms, etc.....	500
Sugar.....	182,648
Coca.....	1,864
Coffee.....	919
Old iron.....	6,069
Rags.....	107
Wool.....	843
Quicksilver flasks.....	698
Opium.....	3,050
Spices.....	20
Tea.....	4,000
Salt.....	4,677
Oil.....	1,109
Salmon.....	570
Bark.....	428
Personal effects.....	116
Total.....	\$1,203,602

IMPORTS FROM THE UNITED STATES THROUGH THE PORT OF CALLAO.

Lumber:	
Oregon pine.....	\$180,000
White pine.....	90,000
Redwood.....	40,000
Oak.....	50,000
Pitch pine.....	50,000
General merchandise per sail, as per manifest.....	986,000
General merchandise per steamers (estimated).....	480,000
	\$1,876,000
Deduct the following, included with cargoes of general merchandise:	
White pine.....	\$90,000
Pitch pine.....	50,000
Oak.....	50,000
	190,000
Total.....	\$1,686,000

The difference between the totals of the two foregoing tables, \$672,398 constitutes the balance of trade in favor of the United States.

The total exports from the republic to all destinations, in the year just mentioned, were as follows:

Guano, 450,000 tons.....	\$18,000,000
Nitrate of soda, 250,000 tons.....	12,000,000
Sugar, 200,000 tons.....	15,000,000
Hides and skins.....	1,000,000
Wool.....	500,000
Cotton.....	200,000
Metals other than precious.....	300,000
Silver.....	2,225,000
Ice.....	150,000
Miscellaneous.....	100,000
Total.....	\$49,475,000

We subjoin the latest official statement accessible regarding the nitrate-trade in the most important district, the province of Tarapacá:

SHIPMENTS.	Sacks.	Quintals.
Nitrate of soda shipped to Europe for Government account:		
From Iquique.....	733,248	2,192,763·62
“ Pisagua.....	361,004	1,088,194·60
“ Mejillones.....	63,519	155,225·75
“ Mollendo.....	20,991	64,631·30
“ Tocopilla.....	4,366	14,060·28
	1,174,428	3,514,875·55
To the United States, from Iquique.....	173,669	540,579·41
	1,348,097	4,055,454·99
Nitrate of potash for Government acc't	40,807	113,668·44
Total for Government account.....	1,388,404	4,169,123·43
Nitrate of soda shipped for private account, for orders:		
From Iquique.....	335,295	1,015,205·52
“ Pisagua.....	205,835	608,753·46
“ Mejillones.....	86,716	106,589·74
“ Mollendo.....	8,577	25,527·59
Total for private account.....	536,423	1,756,067·61
Total shipments:		
Nitrate of soda.....	1,934,520	5,811,522·60
Nitrate of potash.....	40,807	113,668·44
Grand total.....	1,974,827	5,925,191·04

These resources of immense wealth, however, gave rise to incessant disputes between the Governments interested, and led to the disastrous war now being waged between Bolivia, Chili, and Peru. (For the motives and origin of the war, see BOLIVIA and CHILI.) A Chilean company founded at Valparaiso were working the guano deposits on a grand scale, when the

Bolivian Government imposed a tax on the export of saltpeter. The company refused to pay it, invoking the treaty of 1874; but the Bolivian Government answered Chili's protest by ordering the sale by auction of the property of the company on the 13th of February, 1879. The Chilean Government sent at once a man-of-war to Antofagasta and seized the port. The news of the occupation of Antofagasta created a great sensation in Peru. This republic had in 1873 entered into a secret offensive and defensive alliance with Bolivia against Chili; and the latter republic, having demanded in vain the neutrality of Peru, declared war against her on the 5th of April. Presidents Prado of Peru and Diaz of Bolivia occupied with their troops Tacna and the neighboring port of Arica. A strong force under General Bundia was ordered to defend the port of Iquique, and a reserve army of 10,000 men was formed at Lima, the capital of Peru. Two Chilean men-of-war, the *Esmeralda* and *Covadonga*, having appeared before Iquique, blockading the port, the Peruvian Government dispatched against them from Arica the frigate *Independencia* and the monitor *Huáscar*. After a desperate combat between the *Huáscar* and *Esmeralda*, the latter having been attacked both by the heavy cannon of the *Huáscar* and the troops on shore, the Chilean vessel was sunk.

The war assuming grave dimensions, the Peruvian Government, constrained to raise additional revenue, established a stamp-tax on tobacco, opium, cigars, wine, and liquors, and authorized the Executive to sell by public auction all immovable property belonging to the nation not used in the service of the public.

Chilean men-of-war appeared off Pisagua, which was defended by about 900 Bolivians under General Bundia. Two Parrott rifles, mounted on the bluff overlooking the town, afforded inadequate protection to the port. The fight was heavy and the loss of life great; and in spite of the spirited resistance of the shore batteries, Pisagua was captured, and Bundia retired toward San Bernardo, and thence to Agua Santa, fifty miles from Pisagua, being gradually strengthened by other forces. The lack of generalship and concerted action was soon painfully felt, in spite of the bravery of the troops. On the 18th of November Bundia retraced his steps with a force of over 8,000 men, and on the 19th arrived in front of a hill called San Francisco, which commands the valley through which the railroad runs. The Chileans were entrenched on the hill. The allied forces attempted to dislodge them, but failed, losing more than a thousand men, while the Chileans also suffered very heavily. The men were hurled against the impregnable position of the Chileans, stationed on the top of the high hill with precipitous sides, covered with artillery and mitrailleuses. The attacking party behaved nobly, the heights being gained once by two Peruvian regiments; but the fresh troops of their enemy, instantly brought for-

ward, drove the attacking column back, killing and wounding a large number, after a hand-to-hand fight lasting three hours. The next morning Bundia, having again been attacked by the Chileans under cover of a heavy fog, retired with one body toward Tarapacá, while Bustamante with the cavalry took the road for Arica. General Villegas, commanding the Bolivian division, was wounded and made prisoner by the Chileans. The movement commenced by Bundia, and terminating so disastrously at San Francisco, was to be seconded by an attack on the Chileans by 4,000 Bolivians under General Diaz, who, hard pressed by want of provisions, on learning of the defeat at San Francisco determined to return to Arica. The Chileans took possession of the position which their enemy had occupied. About the same time the Blanco met Peruvian vessels off Arica and captured the *Pilcomayo*. By the 26th of November 3,000 of the allies routed at San Francisco reached the town of Tarapacá, where they were joined by the body of 800 Bolivians and Peruvians who had been in garrison at Iquique. On the 27th the Chileans surrounded the allied troops. Three times the Chileans were driven out of the position they had selected during the night, and as many times did they re-form and charge the Peruvians. After prolonged fighting the Chileans were driven up the heights and retired, making another stand a league from their first position; but they were again attacked, and had again to retire.

After the disastrous defeat at San Francisco, followed by the hardly less costly victory at Tarapacá, President Prado proceeded to Lima, where he resumed the government. He was universally charged with incompetency, and the ruin of the army in the field was attributed to him. His position became untenable, and he fled to Panama, leaving the government to the constitutional Vice-President, who retained the same Cabinet.

One of the greatest disasters to the Peruvians, and also one of the most memorable actions of naval warfare in modern times, had occurred on the 8th of October, when the Chilean men-of-war *Cochrane* and Blanco attacked the Peruvian monitor *Huáscar*. The commander of the latter, Admiral Grau, opened fire on the enemy with his turret-guns (two 300-pounder Armstrong rifles); the *Cochrane*, carrying six guns, instantly replied. From the decks and tops of the two vessels the fire of musketry and Gatling guns was incessant. The other Chilean ironclads arrived soon on the scene, and opened fire on the *Huáscar* with terrible effect. A solid 300-pound shot from the Blanco struck the ram in the stem, destroyed the steering gear, and, passing directly through the ship, killed the brave admiral and many others. The *Huáscar* became unmanageable, and the two Chilean vessels concentrated their fire upon the doomed vessel, which was soon at their mercy. Out of her 216 men, only 86 were alive. The combat took place north of Point Mejillones.

The Prefect Lopez Lavalle having turned Iquique over to the care of the foreign consuls, the Chilians sent marines on shore and hoisted their flag. By decree of the Peruvian President, the port was closed to commerce, and the exportation from all the ports of Tarapacá prohibited. The blockade was now extended by the Chilians to Arica. The Peruvians had only one man-of-war left, the *Union*, the remaining vessels being merely wooden transports badly armed and unable to leave Callao, while the Chilean fleet was reinforced by the thoroughly repaired *Huáscar*.

After the departure of General Prado, the popular dissatisfaction with the government of La Puerta became very great. As time was lacking for a regular Presidential election, Nicolas de Piérola assumed the dictatorship after the armed resistance of the governmental troops at Lima had been overcome. Being received at Callao with a warm welcome, Piérola was permitted to take the helm of the state. The people of Lima resolved on the 23d of December to raise him to the "supreme magistrature of the nation, with full powers." Lima was declared under martial law; all citizens capable of bearing arms were enrolled in the line of National Guard regiments. The ports of Iquique and Pisagua were declared closed, and all Peruvian commercial relations suspended during the occupation of the province of Tarapacá by the Chilians. General Buidia was suspended from the command of the southern forces, Rear-Admiral Montero being his successor. The ports of Arica, Ilo, Mollendo, and Islay were blockaded by the Chilean squadron.

PLAGUE, THE. The government of Astrakhan, in Russia, was afflicted for several months in 1878 and 1879 by an epidemic which after investigation was decided to be the genuine Eastern plague. The attention of the countries of eastern Europe was directed to the danger of the disease spreading and becoming general, and renewed interest was awakened respecting a scourge once of the most fearful character, concerning which the Western nations had almost ceased to have any apprehensions. During the present century the plague has appeared to only a limited extent in Europe, and has hardly risen to be an epidemic in any civilized state. The references made to it in history, from the time of Thucydides down, show that it has been in the past one of the most dangerous diseases that have ever afflicted the human race. The accounts which are given of the number of persons who have fallen victims to it in the different countries and cities it has ravaged from time to time seem hardly credible; and, inasmuch as they are not based on any exact enumeration, but only on estimate, they may be exaggerated. Nevertheless, it is an authenticated fact that extensive districts and flourishing towns have been more than once depopulated by it. Such was the case under the epi-

demic of the "Black Death" in the fourteenth century, when 25,000,000 persons are said to have perished in Europe. The disease has never since been so universally destructive, but it prevailed several times in succeeding centuries in more limited areas with nearly equal malignancy. During the eighteenth century 300,000 persons are said to have died of it in East Prussia, from 1703 to 1709; Marseilles was visited by it in 1720; 30,000 people of Messina died of it in forty days in 1743; and 52,000 died in Moscow in 1770. During the present century the plague has appeared in only a few places in western Europe: in Malta in 1813; in Bari, in Lower Italy, in 1815; in Majorca, where it became a considerable epidemic, in 1820. It has appeared several times in the Turkish Empire, but not since 1843 in its European dominions. It was an epidemic in Mesopotamia in 1857; it has prevailed in Persia at different times since 1863. An outbreak occurred at Bagdad in 1876, and another at Reshd in 1876-'77. Another variety of the disease, called the Indian plague, which is characterized by bleeding from the lungs, prevailed in different parts of India from 1815 to 1821, in 1836, 1846-'47, 1859-'60, and 1863. In Russia, during the present century and previous to the last visitation, the plague prevailed in the Caucasus in 1806-'7, appearing in Mordok, Astrakhan, and Zarov, and in Saratov in 1808; then drew back in 1810 to the region south of the Caucasus. It broke out at Odessa in 1812, and never wholly disappeared from the country till 1820. At some places attacked during these visitations, all the inhabitants are said to have died.

The removal of Europe from the liability to the attacks of this disease, which it once suffered in common with Eastern countries, is attributed to the general adoption of sanitary precautions and the improved condition of the life of the people. The plague has always originated in the East, generally in Turkish and Persian lands. It is now largely confined there. In these districts, and particularly in the plains of Mesopotamia, every condition is favorable to the generation of disease. The lands, neglected for ages, are exposed to the overflows of the rivers, and are swampy and miasmatic, so that intermittent fevers are always prevailing. The people live in damp, unventilated huts, are filthy and surrounded by filth, and know nothing of the simplest rules of health. Offal is allowed to remain and accumulate where it falls, and extreme carelessness exists in the burial of the dead, whose bodies are seldom perfectly covered. To these is added the Persian custom of bringing their dead to be buried in the ground which is sanctified by the neighborhood of the tombs of Ali and Hussein, in which considerable caravans are often engaged, generating, with the corpses, noxious emanations. Here a plague prevailed in 1876, and hence, it is supposed by some, its germs were carried

by returning Russian soldiers to the province of Astrakhan, where the disease broke out in the fall of 1878. The story is that it was conveyed in a Turkish shawl which a Cossack took home and gave to his betrothed. It has been suggested that it may have been transmitted more directly from the Russian army, where an extraordinary mortality was acknowledged from typhus, under which name a worse disease might have been disguised. Against this it is urged that the impartial correspondents of neutral nations who were with the Russian armies say nothing of plague, although they would not have failed to mention it had there been a suspicion of its existence. A simpler theory is that it was communicated from Reshd, where it raged in 1877 and 1878, and whence there was a regular trade by vessels to Zaritzin on the Volga. At Astrakhan, the disease fell under similar conditions to those which favor its propagation in the East. The country is subject to inundations; the people are poor, badly housed, and filthy in their habits; and the principal business of the district, the curing of fish, is one which peculiarly favors the accumulation of offal and the generation of a poisonous atmosphere.

A few cases of disease similar to plague were noticed in Astrakhan in May, 1877, but according to the Russian accounts they soon disappeared. The first cases in numbers occurred at the *stanitza* or village of Wetlianka in the beginning of October, 1878. Wetlianka is situated in the circle of Jenotavsk, 149 versts (about 93 miles) from the city of Astrakhan, and 20 versts (13 miles) from the town of Nicolaskov. It lies on the right bank of the Volga, in a tolerably high, level, and exposed situation, with a loamy soil supporting a scanty vegetation. The town is about a hundred years old, and had one thousand inhabitants, with three hundred houses, all of wood, small and not clean. The only occupation of the people was fishing, in connection with which was a considerable curing establishment. The place was considered unhealthy and subject to fevers, and had suffered much from the common epidemics, cholera, and syphilis. From November till the 25th of December, 1878, the weather was moist, cloudy, mild, with only occasional winds, which, blowing lightly from the southwest, brought with them a fine rain. A snow fell on the 12th of December, which soon melted away. According to the official reports, the cases at first appeared of a mild form. At the beginning of November they were represented as progressing favorably after a duration of from ten to twelve days, although purulent swellings were already observed in the armpits of the sick. Dr. Depner, of the Cossack corps, visited the place on the 18th of November, and after some days of observation declared the disease to be typhus. Hardly had he gone away when it changed its type, with a great increase of mortality, so that by the 27th of November the reports obscurely

mentioned that 43 per cent. of those attacked died and 14 per cent recovered, without accounting for the others. Dr. Depner visited the cases again on December 17th, and gave the opinion that the disease was a very malignant typhus, or a new form of disease partaking of the characters of typhus and the Indian plague. The marks of the disease were, according to his account, a palpitation of the heart coming suddenly upon a condition of general good health, irregular pulse, nausea, giddiness, pressure on the breast, spitting blood, thin vomitings, stagnation of the blood, paleness of the face, apathetic expression, and dull, sunken eyes, with enlarged pupils. After three or four hours the patient would suffer an extreme exhaustion, which was followed by dry heats, lethargy, some delirium, suppression of urine, and costiveness. To these were added in some cases after the 22d of December spots on the body from the size of a millet-seed up, and a peculiar honey-like odor known as the "plague-smell"; and death came on during a state of unconsciousness through the rapid decay of the vital forces. The corpses did not become stiff, but began to decay in two or three hours. By the 26th of December 100 per cent., or all who were attacked by the disease, died after a sickness of from twelve hours to three days. Among the victims were Dr. Koch, six surgeons, and a number of priests and Cossacks who took care of the sick. Notwithstanding this malignity of the epidemic, and although the symptoms agreed with those of the true plague, the Government took the utmost care to conceal its real nature, and, contradicting all reports to the contrary, declared that it was a typhoid fever. A second physician sent to visit the infected district, Dr. Krassofski, declared that the disease was without doubt a true plague. By the 14th of January, 1879, the mortality had reached 368 persons, 85 per cent. of those who had been attacked, and 40 per cent. of the population of the villages of Wetlianka and Prischiba.

Measures were first taken by the Government in January to prevent the further spread of the epidemic. Saratov was put under quarantine, and a medical inspection of the conveniences for it was ordered, under the direction of the sanitary chief of the district. Pains were still taken to conceal the nature and extent of the infection, but the reports of its spread could not be wholly suppressed. Its outbreak was reported at Zaritzin, Nicolaskov, Kereselitzev (100 versts outside of the limits), Selitrena, Udatschnov, Michaelovskov, and toward the end of January in St. Petersburg itself. The identity of the reputed cases in St. Petersburg was stoutly denied, and is in doubt, but they produced genuine consternation. The efforts of the Government to conceal the real condition were not acquiesced in by the physicians. Dr. Botkin, physician to the imperial family, declared unequivocally, at a meeting held January 23d in the rooms of

the Society of Practical Physicians, that there could be no question that Russia was again attacked by its old enemy the *tehuma*, or Eastern plague, which seemed to be so closely akin to the "Black Death" of the middle ages, and that the symptoms were just the same as they were of old. The Government had by this time declared that it was ready to allow an international commission to proceed to the seat of the epidemic, and would do everything to assist its labors. Toward the end of January the "Journal de St. Pétersbourg" stated that the timely and energetic measures adopted by the Government, and the promptitude with which information regarding the epidemic was communicated to the public, were proofs that the time was past for bureaucratic mystery concerning the truth in a matter affecting the public health; and the official telegrams announced that there were no persons ill with the epidemic in Wetlianka, and there was only a little of it in the other villages. Commissioners of the Austrian and German Governments visited the infected districts to investigate the disease, but failed to gain satisfactory information. They were treated with politeness, but were not assisted by the officers in the object of their errand.

General Loris-Melikoff was appointed at the beginning of February to go to Astrakhan and take charge of the necessary measures for stamping out the plague. He took with him a commission of experts and assistants, and had authority to use whatever means might be required. Committees were formed in the principal towns for promoting cleanliness among the poorer classes, and lectures on the plague were delivered at many of the medical schools. An imperial decree of February 17th authorized General Loris-Melikoff to try by court-martial all civilians violating the quarantine regulations in those parts of Astrakhan which were to be placed by him under martial law. It was decided to burn Wetlianka and the houses in other villages in which cases of the plague had occurred, with provision for recompensing the people for the losses which they might suffer. These measures were carried into effect, and at the end of February General Loris-Melikoff reported that there was not a case of epidemic illness in the district under his jurisdiction, the last case having been registered on the 9th of the month.

Stringent measures of quarantine were put in force by the Governments of neighboring states as soon as it seemed definitely established that an epidemic existed in Russia. The German and Austrian Governments ordered a detention of passengers and goods, and gave notice that if the epidemic spread to a threatening extent the frontiers should be closed altogether; the Italian Government ordered a quarantine against all vessels arriving from the Black Sea; similar measures were adopted at the ports of other nations visited by Russian vessels; and the Roumanian Government

made the prevalence of the plague a ground for raising fresh objections to the passage of Russian troops through its territory. These precautions were objected to by the Russian Government, which chose to regard them as restrictions inflicted upon its commerce for which the condition of the country did not afford a sufficient justification.

The form in which the plague manifests itself is subject to modifications according to the degree of violence which the disease assumes. In the most violent attacks, illness can hardly be spoken of, for they run their course in about two hours. The French physicians who observed the disease in Egypt called this form *peste foudroyante*. In the next most violent form, the patient after the earlier symptoms falls into a delirious state, with stammering speech. The pulse is hardly perceptible. The only other marked change is an effusion of blood in the skin. The tongue continues moist, but the skin is quite dry, and death ensues after twenty-four or at most forty-eight hours, so that there is no time for the buboes to form, or more than begin. In somewhat less malignant cases, in which recovery occasionally takes place, the buboes or boils are formed in the soft parts, in the armpits, and on the neck, and cause great pain. They are swellings from the size of a pigeon's egg to that of a goose-egg, hard, yielding at first, afterward fixed and painful to the touch when the skin has become red around them, and finally, if the patient has not succumbed to the disease, suppurate in the second or third week. Suppuration is considered a good symptom. In other cases the buboes dry up, and this denotes increased danger. Generally, however, the patients on whom the boils appear die on the fourth or fifth day, before suppuration can take place. The general symptoms are similar to those described as characterizing the disease at Wetlianka, of which extreme exhaustion, vomiting, spitting blood, and the honey-like "plague-smell" are among the marked features. If the person attacked lives through the earlier stages, he is afflicted with offensive sweats, and dies unconscious or in convulsions. In cases which result favorably, a warm sweat comes on, sleep follows, the buboes open, the appetite returns, etc.; but the process of recovery requires weeks and often months. Milder forms of the disease occur, in which the symptoms are mitigated and a favorable result is more frequent. The disease prevails at all seasons, but has been generally found to diminish greatly or disappear in very hot and very cold weather.

PORTUGAL, a kingdom in southwestern Europe. King Luiz I., born October 31, 1838; succeeded his brother, King Pedro V., November 11, 1861; married, October 6, 1862, to Pia, youngest daughter of King Victor Emanuel of Italy. Issue of the union are two sons: Carlos, born September 28, 1863, and Alfonso, born July 31, 1865.

The area is 35,843 square miles; the population, according to the census of January 1, 1878, was 4,745,124. The area and population of the several provinces were as follows:

PROVINCES.	Area in square miles.	POPULATION IN 1878.		
		Males.	Females.	Total.
Minho.....	2,521	467,819	547,575	1,015,394
Tras os Montes.....	4,292	204,826	205,635	410,461
Beira.....	9,253	669,206	721,511	1,390,747
Estremadura.....	6,934	486,802	464,659	951,545
Alemtojo.....	9,425	197,169	177,334	374,503
Algarve.....	1,576	104,899	101,503	206,901
Total continental.....	34,606	2,180,811	2,213,240	4,394,551

Madeira.....	315	63,592	63,329	126,921
Total kingdom.....	35,843	2,314,623	2,430,501	4,745,124

The area of the Portuguese possessions in Asia and Africa is 704,132 square miles; the population 3,247,634.

The following were the gross sums of the budget estimates for the financial year 1879-'80, in contos and milreis (1 conto = 1,000 milreis; 1 milreis = \$1.08; 5,603 : 876 means 5,603 contos and 876 milreis):

REVENUE.	
1. Direct taxes.....	5,603 : 876
2. Register.....	2,746 : 800
3. Indirect taxes.....	14,290 : 639
4. National domain.....	2,425 : 556
5. Other receipts.....	1,357 : 921
Total.....	26,424 : 842

EXPENDITURES.	
1. Interest on home and foreign debt.....	11,716 : 810
2. Ministry of Finance.....	5,495 : 267
3. Ministry of Foreign Affairs.....	257 : 539
4. Ministry of the Interior.....	2,201 : 398
5. Ministry of Worship and Justice.....	691 : 755
6. Ministry of War.....	4,336 : 137
7. Ministry of the Navy and Colonies.....	1,627 : 804
8. Ministry of Public Works.....	3,539 : 433
9. Extraordinary expenditures.....	3,739 : 341
Total.....	33,544 : 079

The public debt on June 30, 1878, amounted to 374,122 contos.

The actual strength of the army on August 15, 1879, was 1,744 officers and 25,833 men, of whom 11,360 were out on furlough.

The navy in 1879 consisted of 28 steamers, of 4,441 horse-power and 118 guns, and 9 sailing vessels, of 31 guns.

The trade of Portugal in 1876 was as follows (in contos):

COUNTRIES.	Imports.	Exports.
Great Britain.....	17,541	11,595
France.....	5,460	2,172
Spain.....	2,189	1,321
Sweden and Norway.....	924	152
Germany.....	632	919
Russia.....	500	183
Belgium.....	545	171
Netherlands.....	293	191
United States.....	2,541	400
Brazil.....	1,934	3,736
Portuguese colonies.....	801	1,024
Other countries.....	888	620
Total.....	34,553	22,674

The movement of shipping in 1876 was as follows:

FLAG.	ENTERED.		CLEARED.	
	Sailing vessels.	Steamers.	Sailing vessels.	Steamers.
Portuguese:				
Sea-going vessels.....	603	93	815	83
Coast.....	4,961	606	4,783	626
Foreign.....	2,619	1,715	2,684	1,787
Total.....	8,243	2,419	8,282	2,446

The commercial navy in 1878 consisted of 588 vessels, of which 42 were steamers. The total length of railways in operation in September, 1879, was 1,151.5 kilometres. The length of telegraph lines in September, 1878, was 3,711 kilometres; of wires, 8,042 kilometres; the number of stations, 185; the number of dispatches in 1877, 686,518. The number of post-offices in September, 1879, was 686, of which 38 were on the islands. The number of inland letters in 1877-'78 was 12,342,133; of newspapers, 7,315,915; of printed matter, of postal cards and samples of goods, 1,415,646; and of foreign letters, newspapers, etc., 3,372,456.

Parliament was opened on January 2d by the King in person, who said in his speech from the throne that a treaty had been made with England for a railway between Goa and British India, and also for a railway uniting the Transvaal to Lourenço Marques. The state of the finances required serious attention. On January 14th Senhor d'Andrade Corvo, Minister for Foreign Affairs, speaking in the Chamber of Peers in reference to a concession granted to a Portuguese subject for fanning the forests, mines, and land for agricultural purposes in the Zambesi district in Mozambique, said that Portugal, which for a long time past had in Europe been in close alliance with England, should accept the coöperation of that power for mutually upholding and developing their colonial interests; a coöperation which would be based upon mutual respect for each other's territories, and upon the firm assurance of the loyalty and sincerity of the intentions of each Government toward the other. The Chamber of Deputies organized on January 21st, when the Government candidate was elected president by 82 votes, the opposition abstaining from

voting. In the Chamber of Peers, an order of the day favorable to the Government was adopted by 36 to 21 votes. The Minister of Marine subsequently read a telegram from St. Vincent announcing an attack by natives on the Portuguese fort at Bolama on the Guinea coast, in which several persons were killed. He added that the Government intended to send reinforcements to the scene of the disturbance without delay. In the middle of March the Chamber adopted, by 91 votes to 32, an order of the day approving the conduct of the Government in preventing arms and ammunition from reaching the Zoolos by way of the Zambesi. Owing to differences in the Cabinet, the Ministers resigned in June, and a new Ministry was formed under the presidency of Senhor Braancamp. The last official act of the outgoing Ministry was the signature of a treaty of commerce, navigation, extradition, and suppression of the slave-trade, between Portugal and Great Britain, in respect to their dominions in South Africa. General elections for the Chamber of Deputies were held on October 19th, and resulted in favor of the Government.

PRADO, General MARIANO IGNACIO, was born at Huánuco, in northern Peru, in 1826. He took a leading part in the revolution of 1854, which overthrew the conservative government of General Echenique. In 1865 he again took the lead in the revolution against President Pezet, accused of cowardice in having made peace with Spain after the capture of the Chincha Islands. He entered Lima with an army of 12,000 men, and in November of the same year was proclaimed Dictator (Supreme Chief) of the nation. The war with Spain was renewed, and an alliance effected with Bolivia, Chili, and Ecuador. Prado repelled the Spanish squadron from Callao in May, 1866. Chosen constitutional President in the same year for the term of six years, he was overthrown in the following year by a revolution which resulted in the election of Balta to the Presidency in 1868. Prado was received in Chili with great honor, and appointed a general of division in the Chilian army, and afterward Peruvian Minister in Chili. A revulsion of popular sentiment led to Prado's elevation to the Presidency for a term of four years in 1876. At the outbreak of the present war with Chili he proceeded to Arica as "Supreme Director of the War." The reverses of October and November caused his great unpopularity, which induced him to leave the responsibility of the situation to the popular Nicolas Piérola, and to embark on the 18th of December for Panama and Europe.

PRESBYTERIANS. I. PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA.—The following is a summary of the statistics of this Church, giving the number of churches, pastors, and church-members in the several synods, according to the official reports in the Minutes of the General Assembly for 1879:

SYNODS.	Ministers.	Churches.	Communi- cants.
Albany.....	155	182	19,105
Atlantic.....	62	182	9,658
Baltimore.....	184	189	15,832
Central New York.....	172	162	21,081
China.....	45	89	2,806
Cincinnati.....	151	157	20,885
Cleveland.....	148	165	20,669
Colorado.....	52	60	2,161

Columbus.....	118	177	17,805
Erie.....	187	249	82,097
Geneva.....	122	101	14,185
Harrisburg.....	155	176	22,058
Illinois, Central.....	189	180	10,112
Illinois, North.....	166	148	17,566
Illinois, South.....	102	157	9,625
India.....	41	22	702
Indiana, North.....	82	146	11,998
Indiana, South.....	111	162	16,616
Iowa, North.....	109	141	8,468
Iowa, South.....	125	187	11,906
Kansas.....	162	256	10,317
Kentucky.....	64	83	6,138
Long Island.....	98	68	15,988
Michigan.....	149	163	18,900
Minnesota.....	103	126	6,650
Missouri.....	181	210	11,148
Nebraska.....	60	101	8,573
New Jersey.....	361	267	46,201
New York.....	320	166	86,658
Pacific.....	118	121	6,845
Philadelphia.....	866	294	51,709
Pittsburgh.....	163	195	26,728
Tennessee.....	40	57	3,841
Texas.....	21	33	900
Toledo.....	82	110	10,098
Western New York.....	180	159	21,281
Wisconsin.....	110	181	8,096
Total.....	4,988	5,415	574,486

A committee which was appointed in 1878 to investigate the state of the trust funds held by the various boards of the Church, reported to the General Assembly of 1879 that the amounts of the same were as follows:

1. Presbyterian Board of Publication.....	\$68,000 00
2. Board of Trustees of the Presbyterian House.....	84,055 00
3. Presbyterian Board of Relief.....	41,000 00
4. Trustees of the General Assembly of the Pres- byterian Church.....	251,588 53
5. Presbyterian Board of Education.....	41,950 00
6. Presbyterian Board of Foreign Missions.....	60,560 00
Railroad bonds held as a special trust.....	12,000 00
7. Board of Home Missions.....	149,670 00
Township railroad bonds held as a special trust, no income derived.....	25,000 00
8. Presbyterian Board of Church Erection.....	212,088 69
Total.....	\$941,160 22

The following is a summary statement of the investments of the eight boards:

Bonds and mortgages.....	\$357,506 53
Stocks, notes, iron, city, and railroad bonds.....	390,220 87
United States Government bonds.....	193,433 82
Total.....	\$941,160 22

The General Assembly of the Presbyterian Church in the United States of America met at Saratoga, New York, May 15th. The Rev. Henry H. Jessup, D. D., of Syria, was chosen Moderator. Efforts have been made for several successive years to readjust the basis of representation so as to reduce the number of members of the Assembly, but no measure had been so far devised which could be made satisfactory to the presbyteries, and the overture submitted by the Assembly at its last meeting

had been rejected. The effort was renewed at the present Assembly, and a special committee of one minister and one elder from each Synod was appointed to take charge of the subject. This committee reported a proposition to change the ratio of representation from one commissioner of each order for every 24 to one for every 48 members of the Presbytery. The effect of this measure would have been to reduce the representation of the larger presbyteries one half, while it would leave that of the smaller presbyteries unchanged. This proposition was rejected by a vote of 203 to 241.

The following rules were adopted in reference to the formation of synods and presbyteries in foreign missionary fields: 1. That in regions occupied by the Presbyterian Board of Foreign Missions only, presbyteries, and eventually synods, may be organized at discretion, if not already organized, under whose care the native churches in the missions shall be placed; that each presbytery shall consist of all the ministers, foreign and native, not less than five in number, and a ruling elder from each church; and that the synods shall regularly send certified copies of their minutes and reports to the General Assembly. 2. That in regions occupied both by the Board and by the missions of other Presbyterian denominations, missionary churches, presbyteries, and synods should be encouraged to enter into organic relations with each other for joint work in the common field; but for purposes of representation, the foreign and native ministers connected with the Board, if sufficient in number, shall, with an elder from each of the churches, be regarded as a distinct Presbytery, entitled to appoint commissioners to the General Assembly. Provision having been made for the appointment of delegates to attend the meeting of the Presbyterian Alliance to be held in Philadelphia, the Assembly decided that that proceeding would furnish sufficient opportunities for intercourse with other Presbyterian bodies, and that it would not appoint special delegates to visit their courts. Delegates were, however, appointed to the non-Presbyterian bodies with which the Assembly holds correspondence. The Assembly having been invited to rescind or reaffirm the deliverance of the Assembly of 1835, declaring that the Roman Catholic Church "has essentially apostatized from the religion of our Lord and Saviour Jesus Christ, and therefore can not be recognized as a Christian church," and also to reverse the action of the Assembly of 1875 touching the validity of Roman Catholic baptism, the following minute was adopted on the subject:

Renewing with emphasis and in the terms of the Westminster Symbols their protest against the errors of the Roman Catholic Church, the Assembly are, notwithstanding, unwilling to reaffirm the deliverance of the Assembly of 1835, which declares that that body can not be recognized as a branch of the Church of Christ; and they distinctly disavow their belief in the inferences respecting the invalidity of

Roman Catholic baptisms which follow from that deliverance, and in support of which the said deliverance has been cited.

Furthermore, while it is true, as our standards teach, that baptism is to be administered but once, yet this is not to be so construed as to foster a superstitious sacramentarianism, nor so as to sacrifice the conscientious convictions of either the applicant for baptism or the pastors and sessions to whom application is made. Respecting the rebaptism of converts from the Roman Catholic Church this Assembly, therefore, reaffirm the deliverance of the Assembly of 1875.

Resolutions were passed discountenancing the attendance of church members at theatres and operas, and the reading of secular newspapers on Sunday.

II. PRESBYTERIAN CHURCH IN THE UNITED STATES.—The following is a summary of the statistics of this Church for 1879, compared with those for 1877 and 1878:

DETAILS.	1877.	1878.	1879.

The General Assembly of the Presbyterian Church in the United States met at Louisville, Kentucky, May 15th. The Rev. Joseph R. Wilson, D. D., of Wilmington, North Carolina, was chosen Moderator. The return of the votes of the presbyteries upon a revised "Book of Church Order" which had been submitted to them for their approval, showed that the book had been accepted by a large majority of them, and it was therefore declared to have been adopted. The question of the nature of the

proceedings to be taken in the case of members who indulge in worldly amusements not countenanced by the Church was raised by some general inquiries made by the Presbytery of Atlanta, where a member had been excluded for dancing. The Assembly decided that its deliverances on this subject were not necessarily to be enforced by judicial process, but according to the discretion of the different church courts of original jurisdiction, acting under the checks and restraints of the Church. "The perplexity about the nature of the deliverances in question," the Assembly said, "has arisen from confounding two senses in which the word discipline is used in our constitution. One is that of 'judicial process,' the other is that of inspection, inquest, remonstrance, rebuke, and private admonition. . . . The distinction here asserted is recognized in the Word of God, and in our constitution, for substance at least, in the directions given for the conduct of church members in the case of personal and private injuries. If scandal can be removed or prevented in such cases more effectually oftentimes by faithful dealing in private with offenders than by judicial process, it does not appear why similar good results may not follow from the like dealing in the matter of worldly amusements." A report on Sabbath observance was adopted, which recommended among other things the appointment of presbyterial committees to secure the proper agitation of the Sabbath question in their several presbyteries, and to cooperate with the committee of the Assembly. A proposition was made to merge the Colored Evangelistic Fund in the Evangelistic Fund, but it was defeated. It was shown in the course of the debate on this subject that more was done by the Church in behalf of the colored people than appeared in the reports, inasmuch as considerable evangelistic labors conducted under the authority of the presbyteries were not brought to the attention of the Assembly's committee. The presbyteries were requested hereafter to send up annually to the Committee of Home Missions accounts of the work done within their bounds in addition to the work of the Committee for the Colored People, and of the amounts contributed therefor. A full list of delegates (twenty-eight in number) was appointed to attend the meeting of the Presbyterian Alliance to be held in Philadelphia in 1880.

III. UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The following is a summary of the statistics of this Church as they were reported to the General Assembly in May, 1879: Number of synods, 9; of presbyteries, 58; of ministers, 683; of licentiates, 56; of students of theology, 64; of congregations, 798; of mission stations, 65; of members, 80,692; of baptisms during the year, 4,176; of Sunday-schools, 726, with 7,647 officers and teachers and 65,467 scholars. Amount of contributions: for salaries of ministers, \$435,961; for congrega-

tional expenses, \$207,678; to the boards, \$106,765; general contributions, \$37,126; total contributions, \$787,530, being an average of \$10.95 per member. The contributions by Sunday-schools were \$25,037. The average salary of the pastors was \$893. Out of 176 missionary societies, 160 reported 5,650 members, and contributions of \$13,363.

The twenty-first *General Assembly* of the United Presbyterian Church of North America met at New Wilmington, Pennsylvania, May 28th. The Rev. William Bruce, D. D., of Xenia, Ohio, was chosen Moderator. In answer to a question if the imposition of hands by ruling elders in the ordination of ministers is required or permitted in the "Book of Government," the Assembly decided by a small majority that "ordination is an act of government, and is valid in the case of ministers only as authorized by the Presbytery in its constituted capacity. When so authorized, its administration by the imposition of hands is technically the act of Presbytery if performed only by the presiding officer in the name of and as the exponent of the Presbytery. In view of the direct recognition of the power of ordination in teaching elders, and no such direct acknowledgment of it being given to ruling elders, the imposition of the hands of the elders is not required, and therefore is technically to be regarded as not permitted." To the question, "Is the mingling of the sexes in the dance in a private house, where only the moral and respectable are permitted to participate, a violation of the law of the U. P. Church, when the parties engaged in the dance are members of her communion?" answer was returned that promiscuous dancing is one of the vain and ensnaring recreations of the men of the world, and for members of the Church to engage in such amusement, even with one another, is to have fellowship with the world in its sinful recreations, of which the Assembly distinctly and unequivocally disapproves. An important question arose upon the action of the Presbytery of Sealkote, India, which had admitted to church membership persons having more than one wife, who did not see their way clear to disown wives with whom they had lived for several years, and expose them and their children to poverty and contempt. No official report had been made from the Presbytery on the subject. The Presbytery was directed to report to the next General Assembly its official action in the matter, and the ground on which it was based. The Assembly recommended, in reference to the instruction of elders before they are ordained, that pastors must instruct their own elders; hence, first, that the professors in theological seminaries be directed to give their students full instruction on the duties and office of the eldership; second, that pastors instruct their elders in some systematic way, in order to obtain the highest efficiency of session; third, that the faculties of the seminaries be asked to prepare a manual for the in-

struction of elders as to their duties. Presbyteries were directed to adopt some plan by which contributions to all the boards may be secured at least once a quarter; and the Assembly expressed its judgment that "there should be a careful avoidance of all indirect and questionable means of raising money for the Lord's cause." The report of the Committee on Statistics recommended a careful oversight of all members personally by the sessions, and the erasure of the names, after they have been admonished, of all who continue out of the communion for one year without giving a satisfactory reason for their neglect, and of all who leave their congregation without applying for the usual testimonials and remain away for two years without reporting themselves.

IV. CUMBERLAND PRESBYTERIAN CHURCH.—The following is a summary of the statistics of this Church for the year ending April 30, 1879: Number of presbyteries, 112; of ministers, 1,335; of licentiates, 256; of candidates, 180; of congregations, 2,351; of elders, 8,060; of deacons, 2,335; of baptisms during the year, 4,431; of communicants, 104,994; of officers and teachers in Sunday-schools, 5,988; of scholars in the same, 51,690.

The *General Assembly* of the Cumberland Presbyterian Church met at Memphis, Tennessee, May 15th. The Rev. J. S. Grider of Kentucky was chosen Moderator. The report of the Board of Missions showed that its receipts for the year had been \$20,674, and its disbursements \$20,211. In accordance with the instructions of the previous General Assembly, a new charter, of a more liberal character than the former one, had been procured. A more systematic and energetic effort than ever before had been made to raise money through the pastors, and had been attended with a large degree of success. The only foreign mission of the Church was at Ozaka, Japan, to which two additional missionaries had been sent, and in connection with which attention was called to the value of women as helpers. The educational reports showed that the literary and theological institutions were in successful operation, but needed larger endowments and better apparatus and libraries. The most important institutions are Waynesburg College, Pennsylvania; Lincoln University, Illinois; Trinity University, Texas; and Cumberland University, Tennessee. The last has a full theological faculty, and theological departments are established or being established in connection with the others.

V. PRESBYTERIAN CHURCH IN CANADA.—The following is a summary of the statistics of this Church, as they were reported in June, 1879: Number of synods, 4; number of presbyteries, 35; total number of ministers, 750; of pastoral charges, 857; of congregations (exclusive of Manitoba), 1,027; of families, 73,116; of communicants, 107,715; of Sunday-school teachers, 8,208; of scholars in Sunday-schools and Bible-classes, 78,628.

VI. PRESBYTERIAN CHURCH OF ENGLAND.—The statistical reports of this Church, presented to the Synod at its annual meeting in May, showed that there were 270 congregations connected with the Synod, having in their chapels and mission-halls 131,496 available sittings, of which 61,272 were let. The number of communicants returned was 53,031, showing an increase of 2,192; number of Sunday-school teachers, 5,768, with 53,855 scholars; number of students, 20; of district visitors, 1,746; of Dorcas societies, 2,329; of young men's societies, 3,425; of members of Bible-classes, 6,643. The entire income of the Church had been £182,719, against £228,727 in 1877.

The *Synod* met in London April 28th, and consisted of 540 members. The Rev. Dr. William Graham of Liverpool was chosen Moderator. The Assembly of the Welsh Calvinistic Methodists having appointed a committee to correspond with this Church, with the object of bringing about practical coöperation between the two denominations, the Synod instructed its Intercourse Committee to take steps toward this end. It was pointed out that it was expedient to form English congregations in Wales, because the English language was forcing itself upon the people of the Principality. A proposition declaring eligible to ministerial charges in the Church "the ministers holding pastoral charges and probationers of all Presbyterian churches, whose center of operations is within the British Empire, and whose doctrinal standard is the Westminster Confession of Faith," was discussed and passed.

VII. ESTABLISHED CHURCH OF SCOTLAND.—A Parliamentary return, giving the number of communicants in the Church of Scotland, was published in May, 1879. It shows that out of a total population of 3,360,018 in the kingdom, 515,786 are communicants in the Kirk, of whom 218,411 are males and 297,375 are females. The returns show an increase of 55,000 communicants since the abolition of patronage.

The *General Assembly* of the Established Church of Scotland met in Edinburgh May 22d, and was opened in the usual manner by the Lord High Commissioner as the representative of the Queen. The Rev. Dr. James Chrystal of Auchinleck was chosen Moderator. The Committee on Union with other Churches reported concerning its correspondence with other bodies with whom negotiations had been entered into, which showed that these bodies were averse to considering the question of union on the basis of the Establishment. The United Presbyterian Church had expressly given the connection with the state as a reason for declining to consider the question of union. The Reformed Presbyterian Church, it was said, had raised in its answer "an insuperable barrier" in requiring "the recognition of the descending obligation of the National Covenant of Scotland and of the Solemn League and Covenant of the three kingdoms." The United Secession Synod maintained "it to be the duty

and privilege of nations, like individuals, to recognize and support the Church of Christ," but that the covenants were of perpetual obligation. The Free Church had expressed the conviction that, "in present circumstances, a reunion of the churches in connection with state endowments can not be accomplished in a satisfactory manner." The committee was discharged. The discontinuance of the official religious inspection of schools was directed.

VIII. FREE CHURCH OF SCOTLAND.—The reports on the proceeds of the collections appointed by the General Assembly of the Free Church of Scotland to be made in the different churches under its charge showed a diminution in the amount of more than £3,365 as compared with the amount raised in the previous years. The whole income of the Church had fallen off £24,901. The Committee on Missions to the Jews made a favorable report of its operations at Pesth, Hungary, its principal station. Seven persons had been baptized. The report on Sunday-schools showed that they employed 17,492 teachers and were attended by 189,759 pupils.

The *General Assembly* of the Free Church of Scotland met in Edinburgh May 22d. The Rev. J. C. Burns of Kirkliston was chosen Moderator. The most important business transacted related to the case of Professor W. Robertson Smith, who was charged with having uttered heretical teachings in the article on the Bible which he had prepared for the ninth edition of the "Encyclopædia Britannica." The case had already engaged the attention of the Assembly for two years, and had been sent back by the Assembly of 1878 to the Presbytery of Aberdeen, with which it originated, for a retrial on an amended libel. (The points in the case as thus sent down are given in the article PRESBYTERIANS in the "Annual Cyclopædia" for 1878.) The action of the Presbytery on this order now came before the General Assembly for revision and further disposition. All the other points having been disposed of, the substance of the charge against Professor Smith lay in the specification that he had published the opinion that "the book of inspired Scripture called Deuteronomy, which is professedly an historical record, does not possess that character, but was made to assume it by a writer of a much later age, who therein, in the name of God, presented in dramatic form instructions and laws as proceeding from the mouth of Moses, though these never were and never could have been uttered by him"; an opinion which, the libel declared, "contradicts or is opposed to the doctrine of the immediate inspiration, infallible truth, and divine authority of the Holy Scriptures, as set forth in the Scriptures themselves, and in the Confession of Faith." The action of the previous Assembly with reference to Professor Smith was reaffirmed. Two motions were made for the disposition of the charges. One by Professor Andrew Bonar was to the effect that the Presbytery of Aber-

deen should be directed to try Professor Smith on the single point to which the libel was reduced, and, on finding it proved, to suspend him from his professional, ministerial, and judicial functions until the next Assembly. The other motion, by Principal Rainy, was that, in consideration of the novelty and perplexity of the case, the Assembly, before proceeding further with the libel, should appoint a committee representative of both parties, to consider the case in all its bearings, and confer with Professor Smith with the view of ascertaining the best means of arriving at a result securing the truth of God without disturbing the unity of the Church. The motion of Professor Bonar prevailed, by a vote of 321 to 320 for the motion of Principal Rainy. After the vote was announced, Principal Rainy read a protest against the action contemplated by the successful motion being taken on the strength of so small a majority. The resolution of the previous Assembly in favor of the separation of Church and state was reaffirmed, and the committee was reappointed, to take such action as it might see fit. A resolution was adopted expressing decided opposition to the proposed bill for legalizing marriage with a deceased wife's sister. In answer to a number of overtures from presbyteries against lotteries at bazaars, a resolution was passed exhorting the ministers and people "to discountenance the raising of money for ecclesiastical or other religious objects by what is known as raffles."

The Presbytery of Aberdeen met July 1st, to deal with the case of Professor Smith according to the instructions of the General Assembly. Professor Smith was allowed to make a plea to the relevancy of the libel as amended, after which he filed his answer to it. In this answer he stated that he upheld the canonicity and inspiration of the Book of Deuteronomy, and that he did not regard it as a fraud, as had been imputed to him. In denying that Moses was the author of it, he stood within the liberty granted to every office-bearer of the Church, for the book nowhere said that Moses was its author. What he had done was not in the interests of rationalism, but in those of the faith; for he had designed to take the facts which the rationalists had built upon, and reconcile them with a full recognition of the supernatural in the old dispensation and the inspiration of the Old Testament records. The amended libel was served. The Presbytery met again to consider the case in September, when it resolved simply to report the case again to the General Assembly. An appeal was taken to the Synod of Aberdeen against this action, and the Synod, after giving a hearing to both sides, resolved to sustain the Presbytery.

IX. UNITED PRESBYTERIAN CHURCH OF SCOTLAND.—The following is a summary of the statistics of this Church as presented to the Synod by the Home Committee in May, 1879:

Number of congregations, 544; of ministers, 583; of elders, 4,612; of preachers, 63; of students of divinity, 74; of members, 175,066; amount of income for congregational purposes, £239,754; congregational income for missions and benevolence, £36,390; income from voluntary contributions and other sources of revenue, £41,242; total income, £367,388.

The Synod of the United Presbyterian Church met in Edinburgh May 5th. The Rev. George Jeffrey, D. D., was chosen Moderator. The report on the statistics of the Church showed that the number of congregations was ten more than in 1878, and that there had been an increase of about 1,500 members during the year. The income of the Church was £11,690 less than in 1877. The Synod proceeded to the discussion of the "Declaratory Statement on the Subordinate Standards" which had been provisionally adopted by the preceding Synod (for the text of which see the "Annual Cyclopedia" for 1878, article PRESBYTERIANS). The statement was adopted finally, after which the Rev. David Macrae of Gourcock moved an additional declaration that "in regard to the ultimate penalty of sin the Church does not hold herself bound to the interpretation of the Westminster Confession as to what the Scriptures say on this subject." An earnest debate followed upon the motion, in the course of which the attention of the Synod was brought to the fact that Mr. Macrae, in a speech before the Presbytery to which he was attached, had said that the Church had had recourse to "Jesuitical devices" in the preparation of the declaratory act. The epithet employed by Mr. Macrae was regarded as offensive, and he was requested to withdraw it. He refused to do so, whereupon the Synod passed a resolution of censure upon him for applying the word "Jesuitical" to the proceedings of the court, and the censure was administered to him by the Moderator. Mr. Macrae's motion failed to receive attention. A committee was appointed to confer with Mr. Macrae upon the views expressed by him in his motion and his speech. The committee reported, after having held conferences with Mr. Macrae, that they had unanimously found that his views were irreconcilable with the teaching of Scripture as exhibited in the standards of the Church, and with any reasonable amount of liberty that could be allowed to ministers in relation to the standards, and recommended that he be suspended from the exercise of his ministry, and that a commission be appointed to deal with him and report at the next meeting of the Synod. Among the questions and answers which were quoted in the report as indicating his position were: 1. "Do the lost in hell exist for ever?" "No, if in the state described in the Westminster Confession." 2. "Will they exist for ever in any state?" "We do not know. The Bible speaks explicitly of everlasting life for the good, nowhere of everlasting existence for the bad." Mr. Macrae made an explanatory statement of his belief.

It was decided to leave the question of suspension to the commission, which was appointed to consist of twenty ministers and ten elders, to have presbyterial powers to proceed in the case as they should see cause, the right of appeal to be reserved for both the accused and the members of the commission to an *in hunc effectum* Synod, or, failing this, to a regular meeting of the Synod. The returns of the views of the presbyteries and sessions on the question of marriage with a deceased wife's sister showed that a majority of those bodies were in favor of a relaxation of the law of the Church which excluded from membership persons who contracted such marriages. A committee was appointed to consider the subject and report upon it to the next meeting of the Synod.

The committee appointed by the Synod to deal with the Rev. David Macrae in reference to his views on future punishment held a conference with him after the adjournment of the Synod. The committee found that "the conduct of Mr. Macrae in the premises warrants and requires his separation from his ministerial charge and suspension *sine die* from all ministerial functions." This decision was communicated to the parish church of Gourcock on the following Sunday, upon which a protest on the part of the session against the procedure of the committee was read from the pulpit. Mr. Macrae had demanded to be tried by libel, so that the points in which he differed in doctrine from the Church might be specified; but the committee decided that, inasmuch as there was no doubt respecting his views, this was unnecessary. Mr. Macrae then took an appeal to the Synod on three points: 1. The decision not to try him for libel; 2. The suspension from the ministry; 3. The final action of the committee. A special session of the Synod to review the case was called, to meet July 22d. At this meeting the appeal from the preliminary act of the committee in suspending Mr. Macrae was first called up. This was dismissed, and the committee was sustained by a large majority. On the appeal against the refusal of the committee to proceed by libel, a motion to grant a libel was rejected, and a motion to reject the appeal was carried by 277 votes against 47 for a motion that the appeal be sustained. On the third point of appeal, against the final action of the committee that Mr. Macrae's conduct warranted his suspension *sine die* from all ministerial functions, a motion that, "Inasmuch as certain questions addressed by the committee to Mr. Macrae were not based either on Scripture or the Confession, and inasmuch as the divergence between Mr. Macrae and the Church on doctrinal points does not require suspension *sine die*, but may be dealt with by censure or prohibition, the final decision of the committee be not sustained," was rejected; and a motion to "dismiss the protest and appeal and affirm the finding of the committee, and, on the ground of its finding, declare Mr. Macrae no longer a

minister of this Church," was carried by a vote of 288 to 29. The decision was formally communicated to Mr. Macrae, after which he was permitted to make a short address to the Synod. Mr. Macrae's congregation afterward seceded from the United Presbyterian Church.

X. IRISH PRESBYTERIAN CHURCH.—The following is a summary of the statistics of the Irish Presbyterian Church, as they were published in connection with the report of the proceedings of the General Assembly of 1879: Number of sittings provided, 228,239; total number of families, 79,632; of communicants, 106,776; of communicants added, 6,282, against 4,728 communicants left; of baptisms, 9,068; of elders, 2,145; of deacons, 6,746; of contributors to the Sustentation Fund, 39,392; of stipend-payers, 68,238. The number of national schools reported as under Presbyterian management was 712, and of Sunday-schools 1,053, with 8,579 teachers and an average attendance of 72,288 scholars.

The *General Assembly* of the Irish Presbyterian Church met in Belfast June 2d. The Rev. Professor Watts, D. D., of Belfast, was chosen Moderator. Statistical reports were presented, showing that the entire income of the Church for the year had been £154,377, or £575 less than the income for the previous year; that the entire indebtedness of the Church was £72,000; that about 228,000 sittings were provided in the churches; and that the number of families connected with the Church had increased 478. Exciting discussions took place on the subject of church music. Petitions were presented, asking that, as hymns and paraphrases of the Psalms were now in use in many of the congregations, the Assembly appoint a committee to prepare a selection of such hymns and paraphrases. These petitions were rejected by a vote of 157 to 225; the ministers giving a majority of one in favor of them, and the elders a majority of 69 against them. The committee appointed by the previous Assembly on the course to be pursued toward congregations which persist in using musical instruments in the service, presented a report advising that, while the authorized mode of celebrating praise in the Church was purely vocal, yet no discipline should be exercised on ministers or congregations using instruments. An amendment was offered to the effect that, as the Assembly had pronounced against instrumental music in 1873, that decision should be reaffirmed, and the presbyteries should be instructed to bring the law before transgressing congregations, and report to the next Assembly; which was adopted by a vote of 313 to 278.

PROTESTANT EPISCOPAL CHURCH. The following is a summary of the statistics of the Protestant Episcopal Church in the United States, divided into 43 dioceses and 14 missionary jurisdictions, as they are given in Whittaker's "Protestant Episcopal Almanac and Directory" for 1880:

Total.....	3,253	2,991	324,995	282,988

Number of baptisms during the year, 45,476; of confirmations, 26,903; of candidates for orders, 369; of Sunday-school teachers, 34,000; amount of contributions, \$6,582,979. The churches in Europe included in the table are: the Church of the Holy Trinity, Paris, France; St. Paul's Church, Rome, Italy; American Episcopal Church, Florence, Italy; St. John's Church, Dresden, Germany; Emmanuel Church, Geneva, Switzerland; the Church of the Holy Spirit, Nice, France. The "Church Almanac" gives the number of communicants reported in 48 dioceses and 10 missionary districts as 322,713.

The Rev. Samuel Smith Harris, D. D., of Chicago, was elected by the Diocesan Convention of Michigan, June 4th, to be Bishop of Michigan, in the place of Bishop McCoskry, deposed in 1878. He was consecrated in St. Paul's Church, Detroit, September 17th. The Right Rev. William Henry Odenheimer, Bishop of Northern New Jersey, died August 14th. A special meeting of the Diocesan Convention to elect a new Bishop was held in Newark, October 29th. Seven ballots were taken, when, on the second day of the session, the Rev. Thomas A. Starkey, D. D., rector of St. Paul's Church, Paterson, received a majority of the votes of both orders and was elected. The Rev. Henry Chauncey Riley, D. D., Bishop elect of the Mexican branch of the Church, was consecrated to that office in Trinity Church, Pittsburgh, June 24th. The Rev. John N. Gallcher, D. D., has been elected Bishop of Louisiana, to succeed Bishop J. P. B. Wilmer, who died December 2, 1878.

The thirteenth annual meeting of the *Evangelical Education Society* was held in Baltimore, Maryland, November 6th. The Treasurer reported that he had had funds in his hands for distribution during the year to the amount of \$18,848, and had expended \$14,846. The permanent fund amounted to \$59,000.

The annual meeting of the *Board of Managers of the Domestic and Foreign Missionary Society* was held in the city of New York in October. The Domestic Committee, having charge of the domestic, colored people's, and Indian departments, reported that its total receipts had been \$141,683, of which \$97,635 had been for domestic missions proper, \$13,215 designated by the givers for missions among the colored people of the South, and \$30,832 similarly designated for missions among the Indians. Besides these, \$13,162 had been given in special contributions not under the control of the committee. Three hundred and thirty missionaries had been wholly or partially supported by the committee. The receipts of the American Church Missionary Society (which has become an auxiliary to the Board of Missions) for the year ending September 1, 1879, were \$20,529. The Society had commissioned 39 missionaries, and had 84 missionaries in the field at the time its report was made. The enterprises of this Society are mostly of the character of domestic missions. The total receipts of the Foreign Committee had been \$148,692, of which, however, only \$112,555 were within the control of the Board and Committee. The foreign missions are in Greece, western Africa, China, Japan, Hayti, and Mexico, and return in all 4,499 members and 2,561 day and boarding scholars. An estate known as the "Jessfield Farm," near Shanghai, China, had been bought by Bishop Schereschewsky, as the site for the College of St. John and other educational institutions and missionary residences, and the corner-stone of the college had been laid on Easter Monday of the current year.

The Woman's Auxiliary Society had contributed during the year \$35,363 in cash and \$65,888 in boxes to supply the wants of the various missions.

A general Missionary Conference was held during the meeting of the Board of Managers, October 14th-17th, when the following topics were discussed: "Association in Mission Work, one of the Securities of the Church's Peace and Order"; "What are the Elements which constitute any Branch of the Church a Power?" "What is wanting to the Successful Evangelization of the Colored People of this Country?" "The Christian Solution of the Indian Problem"; "The Indebtedness of the World to Foreign Missionary Enterprise"; "Diversities of Operation in carrying on the Work of the Church consistent with Christian Unity"; "The Claims of the Mining, Manufacturing, and Agricultural Classes"; "The Policy of Concentration or Diffusion in Missionary Work"; "The Peculiar Aptitude of the Protestant Episcopal Church to meet the American Mind and the Demands of the Age"; and "Medical Missions in China."

The sixth annual *Church Congress* met in Albany on October 21st. The inaugural address was delivered by the Bishop of Albany, who presided. The first topic for discussion, "The Relation of Social Science to Christian Ethics," was considered in papers by Charles J. Stille, LL. D., Provost of the University of Pennsylvania; the Rev. Wilbur F. Watkins, D. D., of Christ Church, Baltimore; the Rev. John Steinfort Kidney, D. D., of the Divinity School, Faribault, Minn.; the Rev. C. Maurice Wines, of St. Paul's, Yonkers, N. Y.; and the Rev. J. F. Garrison, M. D., of St. Paul's, Camden, N. J. The other topics discussed, and the authors of papers and addresses upon them, were as follows: "Positive Christian Education"—papers by the Rt. Rev. F. D. Huntington, D. D., Bishop of Central New York, and the Rev. E. T. Bartlett of Matteawan, N. Y.; "Communism in its Relations to Republican Institutions"—papers by the Rev. J. H. Ry-lance, D. D., of St. Mark's Church, New York, the Rev. R. Heber Newton of New York, and Joseph Packard, Jr., of Baltimore, Md.; "The Authority of Dogma"—papers by the Rt. Rev. W. E. McLaren, D. D., Bishop of Illinois, the Rt. Rev. Thomas M. Clark, D. D., Bishop of Rhode Island, the Rt. Rev. G. T. Bedell, Bishop of Ohio, and the Rev. John Cotton Smith, D. D., Church of the Ascension, New York; "Non-Attendance at Church: its Causes and Remedies"—papers by George B. Keese of Cooperstown, N. Y., Francis Wells of Philadelphia, and J. Astley Atkins of New York; "Memorial Art"—papers by the Rev. H. N. Powers, D. D., Christ Church, Bridgeport, Conn., the Rev. C. A. L. Richards, St. John's, Providence, R. I., and President E. N. Potter, D. D., LL. D., of Union College, Schenectady, N. Y., and an address by the Rev. Frank L. Norton, St. John's, Troy, N. Y.; "The Per-

sonal Work of the Holy Spirit"—paper by the Rev. Samuel Osgood, D. D., LL. D., of New York, and an address by the Rev. James Haughton of Yonkers.

PRUSSIA, a kingdom of Europe, forming part of the German Empire. King, William I., German Emperor and King of Prussia. (For an account of the royal family, see GERMANY.) The Prussian Ministry was composed at the end of 1879 as follows: President, Prince Bismarck, Minister of Foreign Affairs and Chancellor of the German Empire; Vice-President, Count Otto zu Stolberg-Wernigerode (appointed May 29, 1878); Hofmann, President of the Imperial Chancery (June 6, 1876) and Minister of Commerce (July 13, 1879); Count zu Eulenburg, Minister of the Interior (March 30, 1878); Maybach, Minister of Public Works (March 30, 1878); Bitter, Minister of Finance (July 13, 1879); Von Puttkammer, Minister of Worship and Education (July 13, 1879); Dr. Lucius, Minister of Agriculture (July 13, 1879); Dr. Friedberg, Minister of Justice (October, 1879).

In consequence of the termination of the alliance which for many years had existed between Prince Bismarck and the National Liberal party (see GERMANY), the three chief representatives of Liberal views in the Prussian Cabinet—Herr Hobrecht, Minister of Finance, formerly Burgomaster of Berlin, Dr. Falk, Minister of Public Worship, and Dr. Friedenthal, Minister of Agriculture—resigned in July. Their resignation was accepted by the King, who appointed as their successors Herr K. H. Bitter, Under-Secretary of State in the Ministry of the Interior, as Minister of Finance; Robert Victor von Puttkammer, President of the province of Silesia, as Minister of Public Instruction and Worship; and Dr. Robert Lucius, Minister of Agriculture. All the three new Ministers are prominent members of the Conservative party. Herr von Puttkammer was born May 5, 1828, at Frankfort-on-the-Oder, and has been in the service of the Prussian Government since 1852. In the war between Prussia and Austria, in 1866, he was appointed Civil Commissary for Moravia. In 1871 he became *Regierungspräsident* (president of an administrative district, of which most of the Prussian provinces have two or three) at Gumbinnen, in 1874 President of the government of Lorraine, and in 1877 *Oberpräsident* of the province of Silesia. He has been a member of the German Reichstag since 1873. In 1879 he was one of the thirty members whom the King of Prussia appointed members of the General Synod of the United Evangelical Church of Prussia. He is a brother-in-law of Prince Bismarck, his wife being a sister of the Princess Bismarck. Dr. Lucius was born December 20, 1834, at Erfurt in the province of Saxony, and is a very wealthy land-owner. He studied medicine at two German universities, took part in 1860 in the Spanish expedition against Morocco, accompanied from 1860 to 1862 the Prus-

sian embassy to eastern Asia as a physician, and served in the campaigns against Denmark, Austria, and France as officer of the Landwehr cavalry. He has been a member of the German Reichstag and the Prussian Landtag since 1870, and has always been one of the leaders of the German Imperial party (*Deutsche Reichspartei*), or, as it subsequently called itself, the Free Conservative party. He is an intimate friend of Prince Bismarck, and has often acted as his agent in arranging compromises between the Parliamentary parties. In 1879 the German Reichstag elected him second Vice-President. Though he belongs by birth to the Roman Catholic Church, he has always supported the Prussian Government in its conflict with the Church. Herr Bitter, the new Minister of Finance, was born February 27, 1813, at Schwedt, and has been in the state service since 1833. He was from 1856 to 1860 Prussian plenipotentiary in the European Commission of the Danube at Galatz, was appointed in 1860 chief inspector of the Rhine navigation at Mannheim, and in 1869 President of the financial section of the provincial government of Posen. During the war with France he was appointed Prefect of the department of the Vosges, subsequently Civil Commissary at Nancy, in 1872 *Regierungspräsident* in Schleswig, in 1876 in Düsseldorf, and in 1877 he became Under-Secretary of State in the Ministry of the Interior. He has achieved considerable literary reputation as a musical writer, being the author of works on Johann Sebastian Bach (1865), Karl Ph. E. and Wilhelm Friedrich Bach (1868), Gervinus, Handel, and Shakespeare (1869), of "Contributions to a History of the Oratorio" (1872), and of a revised translation of "Don Juan" (1872). Immediately after the opening of the Supreme Court of Germany (see GERMANY), on October 1st, Herr Leonhardt, the Minister of Justice, resigned on account of ill health. He was the last of the Ministers who had since 1867 aided Prince Bismarck in his plans for promoting German unity. He was succeeded by Dr. Friedberg, Secretary of State in the Imperial Office of Justice. Dr. Heinrich Friedberg was born January 27, 1813, studied law in the University of Berlin, was appointed Under-Secretary of State for Justice in Prussia in 1873, and in 1876 Secretary of State in the Imperial Office of Justice. As member of the Federal Council he has taken a prominent part in legislation, having been the author of the German penal code, the military penal code, the law on civil marriage, etc.

The area of Prussia is 134,180 square miles, and the population, according to the census of 1875, 25,742,404. (For the area and population of the different provinces, see "Annual Cyclopædia" for 1878.)

In the budget for 1879-'80, the receipts and expenditures were estimated at 711,500,758 marks (1 mark = 23·8 cents). The sources of revenue were as follows:

SOURCES OF REVENUE.

	Marks.
1. Ministry of Finance.....	801,425,393
2. Ministry of Agriculture, Domains, and Forests.....	82,213,954
3. Ministry of Public Works.....	270,344,904
4. Ministry of Commerce.....	282,425
5. Ministry of State.....	523,480
6. Ministry of Justice.....	49,104,900
7. Ministry of the Interior.....	8,701,595
8. Ministry of Worship and Education.....	2,394,357
9. Ministry of Foreign Affairs.....	4,500
10. Ministry of War.....	1,000,000
Total.....	711,500,753

The expenditures are divided into permanent (*fortdauernde*), transitory (*einmalige*), and extraordinary (*ausserordentliche*) disbursements. The permanent are subdivided into current expenditures (*Betriebsausgaben*), administrative expenditures (*Staatsverwaltungsausgaben*), and charges on the consolidated fund (*Dotationen*). The different branches of expenditure were as follows:

CURRENT EXPENDITURES.

	Marks.
1. Ministry of Finance.....	31,617,970
2. Ministry of Agriculture, etc.....	85,475,330
3. Ministry of Public Works.....	196,422,532
4. Ministry of State.....	494,200
5. Ministry of Worship and Education.....	583,000
Total current expenditures.....	264,593,037

CHARGES ON THE CONSOLIDATED FUND.

1. Additions to the crown dotations of the King.....	4,500,000
2. Interest on public debt.....	54,779,309
3. Rentes.....	1,376,977
4. Sinking fund of debt.....	13,402,524
5. Management.....	440,690
6. Herrenhaus (House of Lords).....	164,610
7. Chamber of Deputies.....	1,199,520
Total charges on the consolidated fund.....	80,564,130

ADMINISTRATIVE EXPENDITURES.

1. Ministry of State.....	2,286,000
2. Ministry of Finance.....	119,362,443
3. Ministry of Foreign Affairs.....	410,400
4. Ministry of Public Works.....	16,294,072
5. Ministry of Commerce.....	1,437,605
6. Ministry of the Interior.....	89,170,216
7. Ministry of Justice.....	69,723,425
8. Ministry of Agriculture, etc.....	10,438,302
9. Ministry of Worship and Education.....	47,979,381
10. Ministry of War.....	13,055
Total administrative expenditures.....	307,159,899

Total ordinary expenditures.....	652,622,066
Transitory and extraordinary expenditures.....	53,878,699

Grand total..... 711,500,753

The public debt of the kingdom according to the budget of 1878-'79 was as follows:

	Marks.
1. Consolidated debt of May 2, 1842 (<i>Staatsschuldscheine</i>).....	154,964,300
2. Consolidated debt at 4 1/2 per cent.....	506,938,150
3. Consolidated debt at 4 per cent.....	150,000,000
4. Non-consolidated loans of various dates.....	103,357,000
5. Preference loan of 1855.....	25,500,000
6. War debt of the Kurmark and Nienmark.....	2,588,745
7. State railway debt.....	45,776,941
8. Floating debt, called <i>Schatzammelungen</i>	30,000,000
9. Debt of the provinces annexed in 1866.....	93,107,043
Total.....	1,097,322,279

The principal subject before the Diet at its spring session, commencing on January 8th, was the budget for 1879, which was passed on February 11th. The debate on the appropriation for the Ministry of Worship led to a dis-

cussion of the supposed desire of the Center or Catholic party to negotiate a compromise with the state, when Herr von Schorlemer-Alst (Center), on January 11th, argued that the fact of Prince Bismarck having entered into negotiations with the Pope as to the position of the Catholics in Prussia proved the co-ordination of Church and state. He further stated that the Catholic religion was being forcibly stamped out, and its defenders, to the shame of all Europe, were being hunted out of the land. Having been called to order by the President for the violence of his expressions, he yielded to two other members of the Center, who complained of the excessive favor shown the Old Catholics in Bonn, which gave occasion to a sharp reply from Dr. Falk. On January 29th the House discussed a motion of Herr Windthorst to restore the three articles of the Constitution having reference to the relations of the Church toward the state, and which were annulled when the May laws were passed. Professor Aegidi moved as an amendment that the House should pass to an order of the day, and this motion was adopted, being supported by deputies of all parties except the Center, Polish, and Old Conservative deputies. The Diet was closed on February 21st.

Elections were held throughout Prussia for members of the Diet on October 7th, which resulted in a complete overthrow of the Liberal parties. The strength of each party in the new Diet, as compared with that elected in 1876, was as follows: Conservatives of all shades, 174 (in 1876, 73); Center, 97 (90); National Liberals, 99 (178); unattached Liberals, 5 (8); Progressists, 36 (67); Democrats, 1 (0); Poles, 19 (15); Danes, 2 (2). The result showed a gain for the Conservative parties, and a corresponding loss for the National Liberals, in every province except Hanover, where the National Liberals held their own, while the Conservatives gained one seat from the Center. The largest gains of the Conservatives are found in East Prussia (15), Brandenburg (17), Pomerania (9), Silesia (18), Saxony (16), and Hesse-Nassau (9).

The new Diet was opened on October 28th by the King in person. In his speech from the throne he declared the financial condition to be unsatisfactory, and a new loan would be necessary to cover the expected deficit. A bill was announced providing for the application of the revenue falling to the royal coffers from the surplus imperial imposts toward abating the class and income taxes of the monarchy. The most important passage of the speech referred to the railroads. The King said: "Penetrated by the conviction that the resolute achievement of a state railway system was the only way in which the national lines could be made to serve the public welfare, demanded with increasing emphasis by the interests of the country, his Majesty's Government had concluded several agreements having for their object the transfer to the state of important railways.

By means of such steps the Government was enabled to propose the construction of new lines by or with the assistance of the state, intended to open up new and important districts and connect them with the national network of railroads." The strength of the Conservatives was shown by the election of their candidate, Herr von Köller, as President. Dr. Bender, National Liberal, and Herr Heeremann, Center, were chosen First and Second Vice-Presidents. In the Upper House the Duke of Ratibor was chosen President, and Count Arnim von Boitzenburg and Herr Hasselbach First and Second Vice-Presidents.

On October 31st Herr Bitter, the Minister of Finance, submitted the budget for 1880. The deficit was estimated at 47,000,000 marks, which amount was to be covered by means of a loan. He also introduced bills authorizing the purchase of four lines of railroad. For the entire amount of the capital and the debt of these roads, in all 1,116,633,570 marks, consols were to be issued. Several new lines were also to be built, for which purpose another sum of 59,000,000 marks is to be issued in consols. The debate on the railroad bill was opened on November 11th. It was remarkable that the most incongruous elements joined both in support and in opposition to the measure. While it was opposed by members of the Progress and Center parties, the Conservatives and National Liberals spoke in favor of it. Professor Virchow, of the Progress party, argued at length that if the system of state railroads ever came into force in Germany and in all other countries, it would be the greatest calamity that ever visited the world. From a financial point of view even the state was sure to suffer, and great would be the detriment accruing to the country from the working of such a system under a protective ministry. The whole railroad question was not one of political economy, but of political power. Minister Maybach defended the principle of government railroads. He pointed out the disadvantage arising to commerce from the omnipotent companies of England and the six great companies of France, and laid especial stress upon the fact that in France, in a commission of thirty members, there was a unanimous sentiment in favor of the purchase of the entire French roads. In the course of his speech he made some remarks which created considerable excitement at the Bourse, and called forth numerous protests. The Bourse, he said, was deeply interested in the further existence of private railways, for something was always to be earned there in manipulating them. Nevertheless, he would look upon himself as having done a good work could he help in limiting the activity of the Exchange in this respect. He believed the Bourse to be a poisonous tree which flung its shadow over the life of the people, and he would hold it to be a meritorious thing could it be plucked up by the roots. The debate was continued on November 15th.

Herr Miquel (National Liberal), speaking in the name of the great majority of his party, declared in favor of the views of the Government on the subject. The bill was brought up for the third reading on December 11th, and on the 12th was passed by a large majority, the minority being composed of the Progressists, the Center, and the Poles. It was passed in the Upper House on the 17th. The only noteworthy incident in the debate in the Herrenhaus was a speech by Count von Moltke, who pointed out the military advantages of government railroads.

General Synod of Prussia.—The meeting of the General Synod of Prussia which was held at Berlin in October, 1879, was the most important event in the history of the United Evangelical Church in that kingdom since its constitution on the basis of the union of the two leading Protestant denominations in 1817. It marked the completion of the synodal organization, under which the Church had been reconstituted during the last ten years on a basis which allows a representation of the congregational element in all stages of administration. Under the constitution thus formed, beginning with the parish, the congregational bodies, composed of lay representatives freely elected, regulate the temporalities. Above the congregations, each diocese or circuit, and each province, has its specially elected synod. The highest representative body in the Church is the General Synod, which has the right of meeting every six years, and which met for the first time in 1879. The General Synod is not entirely free in its action, for it has to divide its authority with the Superior Church Council, or Board of Royal Administration, as a coördinate body. The sessions of the General Synod continued during three weeks. One of its most important acts was the settling of a liturgical form for marriage in the church to follow the civil ceremony, which the state makes obligatory. A form of service was agreed upon which permits the minister, without appearing to dispute the validity of the contract already entered into, to pronounce the blessing of the Church upon the marriage. A bill was passed for enforcing discipline against those persons who neglect baptism, confirmation, and religious marriage. It provides that such persons shall lose their rights as electors for church officers, and shall in extreme cases be refused the Lord's Supper. Other questions considered were the revision of the Liturgy, for which the present time was decided not to be opportune, Sunday rest, the prevalence of drunkenness, a day of national humiliation, the rights of the congregations in the election of ministers, and the rights of pastors in elections. A general collection was ordered to be taken throughout the kingdom every two years for the support of city missionaries in Berlin. The orthodox party was largely in the ascendant in the Synod. Those called Confessionals and Positive Unionists numbered nearly two thirds, while only

nine of the members enrolled themselves as Liberals.

PUBLIC DOCUMENTS. *Questions submitted to the Supreme Judicial Court of the State of Maine by the Republican members of the Legislature, and the answers thereto.*

STATE OF MAINE, IN SENATE, }
January 12, 1880.

Ordered, That the following statement of facts be submitted to the Justices of the Supreme Judicial Court, and they be required to give their opinions on the questions appended thereto.

Read and passed. C. W. TILDEN, Secretary.

A true copy.

Attest: C. W. TILDEN, Secretary.

STATE OF MAINE, IN HOUSE OF REPRESENTATIVES, }
January 12, 1880.

Ordered, That the following statement of facts be submitted to the Justices of the Supreme Judicial Court, and they be required to give their opinions on the questions appended thereto.

Read and passed.

ORAMANDEL SMITH, Clerk.

A true copy.

Attest: ORAMANDEL SMITH, Clerk.

GEORGE E. WEEKS, Speaker.

STATEMENT OF FACTS.

Immediately after the annual election of September 8, 1879, copies of the lists of votes cast in the several towns and plantations for various State and county officers, duly attested by the selectmen of towns and assessors of plantations, and by either the town clerk, deputy clerk, or clerk *pro tem.*, and like copies of lists of votes given in the several wards of the cities, duly attested by the mayor and city clerk and a majority of a legal quorum of the aldermen present, were duly returned and delivered into the office of the Secretary of State, thirty days before the first Wednesday of January, 1880. The Governor and Council opened these returns November 17, 1879.

Application in proper form was made by parties interested for inspection of said returns, for the purpose of discovering and correcting any defects or errors therein; but in a large majority of cases such inspection was refused by the Governor and Council, or granted so late and in such a manner as to be of no avail for the correction of errors.

Senators and representatives elect made application to the Governor and Council within twenty days after the returns were opened, stating the errors alleged, and gave due notice thereof to persons to be affected by such corrections, or requested the same to be given, and offered to correct any errors found therein by the record, or by substituting for such returns, if defective, duly attested copies of the record in each case as provided by the statutes, and by offering such other evidence as is authorized by chap. 212 of the laws of 1877. But the Governor and Council refused to receive such evidence or to correct any errors in said returns, or to receive a duly attested copy of the record to be substituted for any defect by reason of any informality. Under these circumstances the Governor and Council proceeded to examine the returns, with the following results:

The return from the city of Portland was duly signed, and showed upon its face all the facts necessary to constitute a legal election. It showed the whole number of ballots given, and that Moses M. Butler, Almon A. Strout, Ruel G. Maxey, Samuel A. True, and Nathan E. Redlon each received over six hundred and forty votes plurality over each of the candidates opposed to them. The only defect alleged to exist in said return was that it contained the words and figures "Scattering, one hundred and forty-three (143)"; but this number, if added or subtracted or disregarded, would still leave each of the candidates above named a large majority of all the votes cast as above stated. The Governor and Council rejected said return, and refused

to summon the five representatives above named, who were elected and appeared to be elected by a plurality of all the votes returned, to attend and take their seats, and refused to report their names and residence to the Secretary of State to be included in the certified roll to be furnished by him to the Clerk of the preceding House of Representatives, as required by law. Subsequently to the making of said return, Moses M. Butler, one of said representatives elect, died, and in pursuance of the provisions of chap. 4, secs. 33, 44, and 47, of the Revised Statutes, a new election was ordered by the municipal officers of the city of Portland. At such election Byron D. Verrill was elected by a majority of over one thousand votes over all others, and a proper return was made to the office of the Secretary of State; but no summons was ever issued to said Verrill, and the Governor and Council refused to report his name to the Secretary of State for the purpose above stated. In the city of Lewiston, Liberty H. Hutchinson, Isaac N. Parker, and Silas W. Cook were elected by a clear majority of all the votes cast. In the city of Saco, George Parcher; in the city of Rockland, Jonathan S. Willoughby and Theodore E. Simonton; in the city of Bath, Guy C. Goss, were in like manner duly elected representatives. In each of these four cases the returns were in due form and signed by the mayor, city clerk, and three aldermen. The Governor and Council in each of the above cases refused to issue summonses and to report the names and residences of the said elected representatives to the Secretary of State, to be included in the certified roll. In the Webster, Lisbon, and Durham class, William H. Thomas appeared by the returns to be elected by a majority of eighty-three votes. The returns from said towns were without defect, and were duly signed by all the selectmen of each town. Upon rumor that the Governor and Council refused to issue a summons to the persons elected because it was alleged that the names of the selectmen signed upon the returns from the towns of Lisbon and Webster were signed by one person in each town, all of said selectmen appeared before the Governor and Council and made oath that the signatures were genuine. In this district another ground was taken, that it appeared from extrinsic and *ex parte* evidence that either the return was not signed and sealed, or the record not made up, in open town meeting. The Governor and Council refused to issue a summons to said William H. Thomas, or report his name to be entered on said certified roll, but did issue a summons to Leonard H. Beal, a person who was not elected and did not appear to be elected by said returns.

The following is that portion of the statement which recites the facts connected with the organization of the Legislatures:

On the 31st day of December, A. D. 1879, the Governor requested the opinion of the Justices of the Supreme Judicial Court upon certain questions submitted by him; and by the opinion of said Justices, in reply thereto, it appeared that the objections and alleged defects in the returns hereinbefore stated were without foundation in law. The Governor and Council were requested in all these cases to recall the summonses which by the opinion of the Court appeared to have been improperly issued, and to report the names and places of residence of the persons legally elected to both branches of the Legislature to the Secretary of State to be entered upon the certified rolls as required by law; but this they refused to do. A certified roll was furnished by the Secretary of State to the Clerk of the preceding House of Representatives, containing the names of one hundred and twenty-two persons properly summoned as representatives elect and seventeen persons heretofore enumerated, viz.: Lewis Votter, Daniel Snow, Alfred Cushman, James O. White, Leonard H. Beal, Osgood N. Bradbury, George W. Johnson, Lincoln H. Leighton, Aaron H. Woodcock, Harper Allen, Joshua E. Jordan, F. W. Hill, James W. Clark, James Flye, John H. Brown, James M. Leighton, and Stephen D. Lord, and no more, no

names of representatives for the five cities above enumerated appearing on said roll. On the first Wednesday of January the Assistant Clerk of the preceding House of Representatives (the Clerk of said preceding House being present) proceeded to call the names on the certified roll above described, whereupon one hundred and thirty-five persons answered to their names. Attention was then called by one of the persons so responding to the vacancies appearing upon the reading of said roll.

A motion was then made that the representatives from said five cities, appearing by the returns from said cities to have been actually elected, should be permitted to participate in the organization of the House. The Assistant Clerk refused to put the motion, and refused to entertain an appeal. Motion was then made that a committee be raised to inform the Governor and Council that a quorum was present and ready to take the oath. Upon that question a call of the yeas and nays was demanded, and it was so taken, and there were seventy-three votes in the affirmative and none in the negative. Attention was then called to the fact that no quorum was present. Motion was then made to adjourn, which said Assistant Clerk refused to entertain or put, and the same was put by the mover and declared carried. Thereupon a number of the members left the hall. The Governor and Council appeared to administer the oath. One of the members summoned called the attention of the Governor to the fact that no quorum had voted to qualify; but the Governor declined to notice this act on the part of the member summoned. Thereupon the Governor proceeded to administer the oath. After the rolls containing the oath was signed, the Governor announced that seventy-six persons summoned had subscribed the oath; among whom were the persons previously enumerated by name as appearing on said roll, except Lewis Voter and Daniel Snow. The announcement of the Governor that seventy-six persons had subscribed the oath was doubted by a member who had subscribed the oath, and a repeated demand was made that this announcement should be verified by reading the names of those who had subscribed; but the Assistant Clerk declined so to do. Protest was made against the administration of the oath before it was administered. Thereupon an election of Speaker was attempted, and John C. Talbot received seventy-two votes, no other votes being thrown.

On the next day sixty members summoned and whose names appeared on the certified roll applied to James D. Lamson, who claimed to be President of the Senate, to be qualified, and he refused in writing to administer to them the oaths required by law.

The facts connected with the alleged organization of the Senate on the first Wednesday of January, 1880, are as follows: A certified roll was furnished by the Secretary of State to the Secretary of the preceding Senate, on which were the names of twenty-three persons properly summoned and who appeared to be elected as shown on the face of returns, together with the names of Daniel W. True, Edward A. Gibbs, and William R. Field, of Cumberland County; Rudolphus P. Thompson, of Franklin County; James R. Talbot, of Washington County; Isaac T. Hobson, of Lincoln County; Ira S. Libbey and John Q. Dennett, of York County; and at ten o'clock in the forenoon on said day said Secretary of the preceding Senate called the names on the roll, and each one responded.

Thereupon one of the members properly summoned called attention to the fact that the names above enumerated on the roll had been substituted for the names of Andrew Hawes, Henry C. Brewer, and David Duran, of Cumberland County; George R. Fernald, of Franklin County; Alden Bradford, of Washington County; Andrew R. G. Smith, of Lincoln County; Jeremiah W. Dearborn and George H. Wakefield, of York County, who appeared by the returns to be elected, and moved that their names be substituted on the roll for those first above enumerated. The Secretary refused to entertain the motion. The oath was then administered by the Governor and Council.

The motion was immediately thereafter renewed, and the Secretary again refused to entertain the motion. An appeal was then taken to the Senate; the Secretary refused to put the question. Protest was then made that unless the substitution moved was made, eleven members properly summoned and having a plurality of the Senatorial votes in their respective counties would refuse to participate in the organization of the Senate. No attention having been paid to this protest, said eleven members did not participate in the further proceedings. The remaining twenty persons proceeded to vote for President of the Senate, and James D. Lamson received twenty ballots, which were cast by twelve members properly summoned and by the eight persons first above enumerated. Public protest was immediately made by a member duly summoned against the election of James D. Lamson as President of the Senate, because he had received the votes of but twelve persons lawfully summoned. The remainder of the officers of the Senate were elected in the same manner and by the same persons as the President.

On the twelfth day of January, 1880, the persons claiming to be legally elected members of the Legislature, but having present less than seventy-six in number, attempted to meet in joint convention for the purpose of witnessing the administration of the oaths to James D. Lamson, to qualify him to exercise the office of Governor, together with twenty members of the Senate, only twelve of whom appeared to be elected by the returns. On the same day sixty-two members of the House to whom James D. Lamson, claiming to be President of the Senate, had refused to administer the oath, and who were properly summoned, together with John R. Eaton, William H. Thomas, A. F. Andrews, David N. Norton, Henry C. Baker, Charles A. Rolf, A. B. Cole, Robert French, Cyrus A. Thomas, Hiram A. Stewart, and John Burnham, previously mentioned, together with the representatives of the cities of Portland, Lewiston, Saco, Rockland, and Bath, met in the Hall of Representatives, and organized by the choice of Speaker, Clerk, and the other officers, after being qualified by taking the oaths prescribed by the Constitution before William M. Stratton, a Clerk of Courts for Kennebec County, and authorized by *dedimus potestatem* to administer oaths according to law. The Speaker received eighty-two votes; the Clerk received eighty votes; the Assistant Clerk received eighty-one votes. After organizing, the following members, Isaac Hanscom of Lebanon, Edward K. Hall of Newcastle, Robert W. Loring of Robbinston district, George S. Hill of Exeter, Frank C. Micherson of Linneus, and Oliver P. Bragdon of Gouldsboro district, were admitted by resolution to act as members *prima facie* of said House of Representatives.

On the same day, in the Senate Chamber, eleven members properly summoned, together with Andrew Hawes, David Duran, Henry C. Brewer, of Cumberland County; Jeremiah W. Dearborn, George H. Wakefield, of York County; George R. Fernald, of Franklin County; Alden Bradford, of Washington County, the facts concerning whose election have been hereinbefore stated, met together and were called to order by Jeremiah Dingley, a Senator elect from Androscoggin County, on whose motion Austin Harris, Senator elect from Washington County, was chosen to preside as Chairman, and Charles W. Tilden was chosen Secretary *pro tem.* upon resolution. Andrew R. G. Smith, of Lincoln County, was admitted *prima facie* to a seat.

Upon motion the members elect present proceeded to make a permanent organization by the election of President, Secretary, and other officers. Joseph A. Locke of Cumberland was chosen President, receiving eighteen votes, and Charles W. Tilden was chosen Secretary, receiving nineteen votes.

The members were qualified before election of officers by taking the oaths prescribed by the Constitution before William M. Stratton, Clerk of Courts for Kennebec County, and authorized by *dedimus potestatem*

tatem to administer oaths. In the organization of both branches of the Legislature the names of all the members elect, who appear by the uncorrected returns to be elected, were placed upon a roll and were called before proceeding to organize the same as herein last mentioned.

Twenty-seven questions, covering the points comprised in the foregoing statement, were submitted to the Court, to which answers were returned as follows (the answer in some instances, as given below, embodying the terms of the question, and in others sufficiently indicating its nature):

An election has been had by the electors of this State. The rights of the several persons voted for depend upon the votes cast. The result should be truly determined in accordance with the Constitution and laws of the State. It was the duty of the Governor and Council thus to declare it. Any declaration of the vote not thus ascertained and declared is unauthorized and void.

The Governor and Council examined the returns, and undertook to declare the result as appeared by the returns. Various questions involving the true construction of the Constitution and statutes relating thereto arose, and the Governor, by virtue of his constitutional prerogative, called upon this Court for its opinion upon the questions propounded. By the provisions of the Constitution the Court was required to expound and construe the provisions of the Constitution and statutes involved. It gave full answers to those questions. The opinion of the Court was thus obtained in one of the modes provided in the Constitution for an authoritative determination of "important questions of law." The law thus determined is the conclusive guide of the Governor and Council in the performance of their ministerial duties. Any action on their part in determining the vote as it appears by the returns in violation of the provision of the Constitution and laws, thus declared, is a usurpation of authority, and must be held void. It only remains to apply those principles to the subjects embraced in the questions propounded.

The Governor and Council have no right to summon a person to attend and take his seat in the Senate or House of Representatives who by the returns before them was not voted for, or being voted for was defeated. To summon one for whom no votes had been cast would be a deliberate violation of official duty. To summon those whom the returns show were not elected would be equally such violation. Either would be intruders without right into a legislative body. The summons thus given would be void as in excess of any powers conferred by the Constitution. Grant this power, and the right of the people to elect their officers is at an end.

Holders of summonses which are void, for the reason that the Governor and Council have failed to correctly perform the constitutional obligations resting upon them, have no right to take a part in the organization, or in any subsequent proceedings of the House to which they are wrongfully certificated. They are not in fact members; but the members rightfully elected, as shown by the official returns, and the opinion of the Court upon the propositions heretofore by the Governor presented to the Court, are entitled to appear and act in the organization of the Houses to which they belong, unless the House and Senate, in judging of the election and qualification of members, shall determine to the contrary.

A member without a summons who appears to claim his seat is *prima facie* entitled to equal consideration with a member who has a summons. He is not to be deprived of the position belonging to him on account of the dereliction of those whose duty it was to have given him the usual summons. The absence of that evidence may be supplied by other evidence of membership.

The House and Senate have the same right to consider and determine whether in the first instance such persons appear to have been elected, and finally whether they were in fact elected, as they have of any and all the persons who appear for the purpose of composing their respective bodies. Under the facts recited in the statement submitted to us, we are of the opinion that Lewis Voter and associates first named in question three were not entitled to act, and that Cyrus A. Thomas and associates lastly named in the question were entitled to act in the House as members; and that Daniel W. True and those first named in question four were not entitled to act, and that Andrew Hawes and others with him named were entitled to act as members of the Senate. In neither case did the Senate or House itself act upon the question of their membership. Both the Senate and House, "meaning the bodies assembled to be organized as such," were debarred from any action thereon by the conduct of the presiding Secretary and Clerk. The assumption of such officers that no questions should be entertained relative to the rights of persons whose names were not upon the rolls furnished by the Secretary of State, but who were claimants of seats, was unwarrantable. The statute of 1869, embodied in the Revised Statutes, chap. 2, sec. 25, can not preclude either the Senate or House from amending and completing the rolls of membership according to the facts.

Each House has the constitutional right to organize itself. The form provided for aid and convenience in effecting the organization does not confer upon a temporarily presiding officer such conclusive power. We have not failed to carefully consider the act of 1869, chap. 67, incorporated into the Revised Statutes, chap. 2, sec. 25, and so far as it declares that "no person shall be allowed to vote or take part in the organization of either branch of the Legislature as a member, unless his name appears upon the certified roll of that branch of the Legislature in which he claims to act," we think it clearly repugnant to the Constitution, which declares that each House shall be the judge of the election and qualification of its own members. It aims to control the action of each within its constitutional powers, till after a full organization with a majority determined and fixed by the Governor and Council. By their action in granting certificates to men not appearing to be elected, or refusing to grant certificates to men clearly elected, they may constitute each House with a majority to suit their own purposes, thus strangling and overthrowing the popular will, as honestly expressed by the ballot. The doctrine of that act gives to the executive department the power to rob the people of the Legislature they have chosen, and force upon them one to serve its own purpose. It poisons the very fountain of legislation, and tends to corrupt the legislative department of the government. It strikes a death-blow at the heart of popular government, and renders its foundation and great bulwark, the will of the people as expressed by the ballot, a farce. Each House has the same power, and is charged with the same duty, to declare the election of its own members, and organize in any legitimate way, as before the passage of that act.

When the member summoned appears by the returns to be elected only because of some error in the name or initial of the candidate not summoned, when such error is correctable by law under the decision of the Court, and the official record states the name and initials correctly, or when the member summoned appears by the returns to be elected only by rejecting the returns of one town because unsigned by the town clerk, though a duly attested copy of the record of said town is seasonably offered as a substitute, it is the duty of the Governor and Council to hear evidence and determine whether the record or return is correct, and, if they determine the record to be correct, to receive it, or a duly certified copy of it, to correct the return, as is provided in chap. 212 of the acts of 1877. But in such case they are required to determine an issue of fact whether the record or return is correct; and so far as their action is concerned in determining

that fact, we think their determination is conclusive, subject, of course, to be reversed by the House. If, however, they should refuse to hear evidence and determine the question, and should by reason of such refusal issue the summons to the candidate not elected, the case would fall under the rule above stated.

If objection was made to the admissibility of the illegally summoned persons as set forth in the statement presented to us, and the Houses took no action thereon, then an organization of House or Senate with less than a quorum would be illegal and void. The Court expressed the opinion on a former occasion that the Senate could organize with less than a quorum of members (85 Maine, 563) where less than a quorum were elected—a condition of things that might happen when it required a majority of votes to elect Senators. That decision met the necessities of that occasion, but the doctrine of that case can not apply when a quorum is in fact elected.

Without a legal organization formed and legal officers chosen by seventy-six members present and voting in the House of Representatives, and by sixteen members present and voting in the Senate, upon the given measure, no officers can be chosen or law passed, nor business done, except to adjourn. No less than seventy-six members can constitute a quorum of the House of Representatives, nor can less than sixteen members, now that a plurality elects, constitute a quorum of the Senate. Nor can either House, without a legal organization formed and without legal officers chosen, compel the attendance of absent members. It is the House or Senate, when formed and organized, that has the power to compel such attendance, and it is not within the power of persons who are merely members elect to do so.

Attendances of members may, under our Constitution, be compelled by such penalties as each House may provide. Until a legal organization has been effected, there is no House to provide penalties for such purpose; until a legal organization is completed, there is no officer in either House to issue a warrant against the absent members. No such power was committed or intended to be committed into the hands of persons not composing and acting as an organized and completed House. It has frequently happened in our history, that legislative bodies have been delayed days, and sometimes weeks, without being able to complete an organization for the want of a quorum.

The vote of no person can be counted to make up a legal quorum who, though summoned, does not appear to be elected by the official returns under the Constitution and the decision of the Court, if the attention of the House is called to the fact that such persons are illegally summoned, and objection is seasonably made to the counting of such persons for the purpose of making up a quorum, and the House does not act upon the question of their admissibility. By the Constitution, Art. IV., sec. 5, "the Senate shall, on the first Wednesday of January annually, determine who are elected by a plurality of votes to be Senators in each district."

By the Constitution, the oath is to be taken and subscribed in the presence of the Governor and Council. By the statute (Revised Statutes, chap. 2, section 23) the Clerk of the preceding House shall preside until the representatives elect "shall be qualified and elect a Speaker; and if no quorum appear, he shall preside, and the representatives elect present shall adjourn from day to day until a quorum appears and are qualified, and a Speaker is elected." Thus it will be seen that while by the statute the Clerk is to preside until a quorum shall appear and be qualified, it is not provided, either in the Constitution or the statute, that a less number than a quorum shall not be qualified, nor can the yea and nay vote on the motion to request the attendance of the Governor and Council for the purpose of administering the oath be deemed of any importance. If the Governor and Council had appeared without a motion or a vote, their authority would have been the same. The qualifying oaths under the Constitution or statute may be administered to the mem-

bers elect of either branch, in any numbers, though a quorum must appear and be qualified before proceeding to an election of Speaker; and if the whole number of votes for Speaker is less than a quorum, and there is nothing upon the record to show that a quorum was present and acting, there would be no election.

In the general provisions of the Constitution, Art. IX., certain oaths or affirmations are prescribed for persons elected, appointed, or commissioned to the offices therein mentioned. It appears that those before whom the prescribed oaths were to be administered refused to act, and that now there is no existing Governor and Council before whom they can be administered. The oath is prescribed. The terms are the essential. Its binding force depends upon its terms, not on the magistrate by whom it is administered. If there is no Governor and Council, or, there being a Governor and Council, they refuse to administer the oath to one representative or to all (for there can be a refusal to all equally as to one), what is the result? Is anarchy to triumph? Can the government be destroyed, or its action paralyzed, because there is no Governor and Council before whom the prescribed oath is to be taken? We think not. The prescribed oath, from the necessity of the case, may be taken before a magistrate authorized to administer oaths. The members must be sworn before they can act. It is by their action that a Governor and Council thereafter are to be elected and the government continued. It can not be presumed that the framers of the Constitution had in contemplation that the oath had better not be administered at all than administered by any other officer than the one designated therein. This is one of the most reliable tests by which to distinguish a directory from a mandatory provision (*State vs. Smith*, 67 Maine, 328).

One whose only title to the Presidency of the Senate is by virtue of an election at which twenty votes only are cast for and against him, and those twenty votes are made up as described, can not become the acting Governor, because he is not a legal President of the Senate. If, of the twenty voting at such choice of President of the Senate, eight did not appear to be elected by the official returns under the Constitution and the decision of the Court, and were not in fact elected; there was then no legal quorum, and could be no valid election of permanent officers, notwithstanding the eight had been summoned by the Governor and Council. Without a legal quorum, and with these eight participating in the proceedings, to the exclusion of those rightfully elected in their places, there could be no valid election of President of the Senate. To proceed with the organization of the Senate without first determining and declaring its own membership, when attention was properly called to the fact that persons were present and acting without right, and that members were excluded, the Secretary refusing to entertain a motion for the correction of the roll and refusing to allow an appeal from his ruling, and the Senate taking no action although protest was made, was illegal and void.

Under the letter of the Constitution, it is at least doubtful whether the President of the Senate is required to take a new oath before exercising the office of Governor, when that office has become vacant in the manner specified therein. The practice since the organization of the State has, we believe, been uniform against requiring such new oaths, and to such practical interpretations of the Constitution, in the absence of express provisions or manifest intention to the contrary, we think effect should be given. A legally chosen President of the Senate may become acting Governor without the administration of any other qualifying oath than that which he has taken in his office of Senator.

It appears from the statement of facts that the members from the five cities of Portland, Lewiston, Rockland, Bath, and Saco were duly elected, as well as by the returns before the Governor and Council; that by law a summons should of right have been issued to them;

that in fact no summons was issued, and that their names were not borne on the roll certified to the House as provided by R. S. M., chap. 2, sec. 25. A motion was seasonably made that these members, appearing by the returns beforehand to have been duly elected, should be permitted to participate in its organization; but the Assistant Clerk refused to put the motion and to entertain an appeal. By the Constitution the returns were before the House. By those returns the representatives above named appeared to be elected. Their seats were not contested. The Governor and Council could not, without a violation of their constitutional duty, neglect to issue to them a summons, nor the Secretary of State to place their names on the certified roll which it was his duty to furnish. The Governor and Council could not legally withhold their summonses from those appearing to be elected. They could not order a summons to issue to some appearing to be elected and withhold it from others. If they could, it would be in their power to select from the members appearing to be elected those who should and those who should not take part in the organization of the House.

Sec. 25, chap. 2, Revised Statutes, restricts the vote to those whose names are borne on the certified roll. The restricting the vote to those only whose names are thus borne is at variance with the Constitution in so far as it restricts and limits the action of the House to those whom the Governor and Council may select, and not to those appearing to be chosen and to those the House may determine to be members. The twelve members had a right to act in the organization of the House. Their election was patent on inspection of the returns. The House in no way denied their right. The question whether their names should be added to the roll was not submitted to its determination. Upon the facts set forth they appeared to be and were elected, and it is not to be presumed that the House, knowing such facts, would have prohibited this action if the Clerk had permitted the question to be put. These members had a right to take part in the organization of the House until it should otherwise determine.

The House can not legally organize or act under a certified roll of one hundred and thirty-nine names only, and giving no representation to the five cities named, provided the representatives from the cities appeared and claimed their seats, and the House took no action whatever upon the question of their right to participate in the organization, the Clerk refusing to entertain a motion made for that purpose, and refusing to entertain an appeal from his ruling thereon.

When persons are legally elected members of the House from the representative districts of Skowhegan and Farmington, and that fact unmistakably appears on the official returns, and by the decision of the Court on the facts recited in the statement submitted, for those districts, those members elect have a right to take part in the organization and all subsequent proceedings of the House without a summons, the persons summoned having returned their summonses and declined to serve as representatives on the ground that they were not elected, unless the House has acted upon the question of their right to act as members, and determined to the contrary.

Eleven members duly elected and summoned, and seven other members not summoned, but appearing to be elected by a plurality of all the votes returned, under the requirements of the Constitution and the decision of the Court, can constitute and organize a legal Senate, provided said eighteen members each received for Senator a plurality of all the votes cast, and the official records as well as the official returns show that fact; and sixty-two duly summoned members elect of the House of Representatives, together with twelve members elect not summoned from the cities of Portland, Lewiston, Bath, Saco, and Rockland, and two members elect not summoned from the towns of Farmington and Skowhegan, can constitute and organize a legal House of Representatives, when the fourteen members above enumerated were in fact elected, and that fact appears by the official returns and by the de-

cision of the Court, no other persons holding summonses for the same seats. Circumstances may exist which will justify and render legal such an organization of the Senate and such an organization of the House. We think such organizations would be justified and rendered legal by the existence of such circumstances as are recited in the statement of facts submitted to us, and that such organizations effected under such circumstances would constitute a legal Legislature, competent to perform all the functions constitutionally belonging to that department of our government. Tumult and violence are not requisites to the due assertion of legal rights. They should be avoided whenever it is possible to do so. They can never be justified except in cases of the extremest necessity. Such peaceful modes of organization are far preferable to a resort to violence. No rights should be lost by those who seasonably assert them and appeal to the constitutional tribunals instead of resorting to force.

The seventy-six members elect enumerated can constitute and organize a legal House of Representatives, together with nine other members elect who were in fact elected, and appear by the official returns and by the decision of the Court to be elected, though the nine seats aforesaid are claimed by other candidates who were summoned by the Governor and Council, but were not in fact elected, and do not appear to be elected by said official returns under the decision of the Court.

When a person receives a summons as a member of the House of Representatives, and returns the same to the Governor before the assembling of the Legislature and resigns his seat, it makes a vacancy in the House which is to assemble, which vacancy "may be filled by a new election," under the provisions of Art. XII., part 1, sec. 6 of the Constitution. That the proper steps may be taken by the municipal officers to that end, it is necessary to regard such resignation as irrevocable. If, when once made, it could be recalled at will, the municipal officers could never know that the seat was vacant by resignation. One who has thus resigned can not be compelled to attend as a member. He is no longer a member. The language of the Court, in regard to using the power of the Houses to compel the attendance of these members, in the constitutional opinion given in 85 Me., 563, applies only to those who, without vacating their seats, absent themselves from the sessions of the body to which they were elected. It would be alike contrary to the spirit of our institutions and detrimental to public policy to hold that a man might be compelled to accept an office of such a character.

In our recent answer to questions presented by the Governor, we said in substance that one of the objects of the constitutional requirement of a record of the vote to be made at the same time and authenticated in like manner with the return was to guard against the possible result of mistake, accident, or fraud in the official returns of votes. When such returns of the vote for Governor are lost, concealed, or inaccessible by accident or fraud, the result of the election may still be ascertained by using certified copies of the official records mentioned in the question. Neither the carelessness nor the turpitude of the officers charged with the making or the custody of the returns can be suffered to defeat the will of the people as expressed in the election, so long as the Legislature can ascertain it from the records thus made. True, the Constitution provides that the Secretary of State shall, on the first Wednesday of January, lay the lists before the Senate and House of Representatives; but this portion is directory, and a failure to comply with it can not defeat the right of the Legislature to ascertain and declare the result of the election. When the framers of our Constitution and our legislators have taken such pains to perpetuate the evidence of the votes cast, and to guard that evidence against the effect not only of accident, but of human fallibility or perfidy, it is not to be thrown away because the Secretary of State fails or is unable to comply with this direction. The Constitution is to be construed, when practicable, in all its

parts, not so as to thwart, but so as to advance its main object—the continuance and orderly conduct of government by the people.

The questions before us are attested in the usual mode, and purport to come from organized bodies. They are of the utmost importance. Our answers are entirely based on the assumption of the existence of the facts as therein set forth. We can not decline an answer if we would. In a case like the present the remarks of Chief-Justice Marshall, in *Cohens vs. Virginia*, are peculiarly applicable. "It is true," he says, "that this Court will not take jurisdiction if it should not, but it is equally true that it must take jurisdiction if it should. The judiciary can not, as the Legisla-

ture may, avoid a measure because it approaches the confines of the Constitution. We can not pass it by because it is doubtful with whatever difficulties a case may be attended. We must decide it if it is brought before us. We have no more right to decline the exercise of jurisdiction which is given than to usurp that which is not given; the one or the other would be treason to the Constitution. Questions may occur which we would gladly avoid; but we can not avoid them."

JOSEPH W. SYMONDS.

R

RANDALL, SAMUEL JACKSON, an American statesman, born in Philadelphia, October 10, 1828. His father was Josiah Randall, a lawyer of high standing in that city; his mother, Ann Worrall, a daughter of General Joseph Worrall, a Democratic leader in the days of Jefferson. Receiving an academic education, he engaged in mercantile pursuits. He married Fanny, a daughter of General Aaron Ward of Sing Sing, New York. He served four years in the City Councils of Philadelphia and one term in the State Senate of Pennsylvania.

Mr. Randall was a member of the "First Troop Philadelphia City Cavalry," a volunteer military company organized in 1774. It was then known as the "Light Horse of Philadelphia," and acted as body-guard to General Washington, crossing the Delaware with him and participating in the battles of Trenton and Princeton. Immediately after the fall of Fort Sumter the troop tendered its services to the Government, and was mustered into the service of the United States, May 13, 1861, for the term of ninety days, attached to the Second U. S. Cavalry commanded by Colonel (afterward the distinguished General) George H. Thomas, and assigned to the command of General Robert Patterson, who says of the troop: "It was with me in the valley of the Shenandoah in the summer of 1861. It was in the advance at the battle of Falling Waters, when, for the first and only time, that gallant soldier 'Stonewall' Jackson was defeated and driven back." Sergeant S. J. Randall acted as quartermaster to the company, and was afterward promoted to the rank of cornet (a rank corresponding to that of captain in the regular army).

On the first intimation of the advance of the Confederate army north of the Potomac in June, 1863, Cornet Randall proceeded to Harrisburg to make arrangements by which the troop could go into service if it was found necessary. General Couch, on announcing to Cornet Randall, commanding, that Governor Curtin would accept the troop without swearing its members into the service, said, "I know we can trust to the honor of the corps without an oath." On June 24th Mr. Randall with his command made an important reconnoissance,

capturing several of the enemy and establishing their presence in large force between Chambersburg and Williamsport. Retiring from Gettysburg as the Confederate army entered, the troop had a skirmish with an advancing force under General J. B. Gordon near the Susquehanna. During the battle of Gettysburg Mr. Randall was provost-marshal of Columbia. Being released from duty after the retreat of the invading army, letters were received by "Cornet S. J. Randall, commanding First City Troop," from the Governor of the State and from the War Department through General Cadwalader, thanking the company for its efficient services.

At the convening of the Thirty-eighth Congress, December 4, 1863, Mr. Randall took his seat in the House of Representatives, and has been reelected to every succeeding Congress, covering a period of seventeen years. In the Thirty-eighth Congress he served on the Committee on Public Buildings and Grounds; in the Thirty-ninth, on the Committees on Banking and Currency, Retrenchment, and Expenditures in the State Department; in the Fortieth, on Banking and Currency, Retrenchment, and the Assassination of President Lincoln. Elected as a Democrat, he has constantly acted with his party in Congress. Without occupying the attention of the House with long speeches, he indicated his interest in pending legislation by frequently participating briefly and pointedly in its discussions. In the Forty-first Congress he was a member of the Committees on Privileges and Elections and on Expenditures in the Treasury Department, and of the Joint Committee on Retrenchment. He spoke against repudiation December 16, 1869, in reply to Mr. Munger, saying: "In the time allowed me, it is hardly possible that I should follow the gentleman from Ohio in all his sayings, or what I might mildly term his political heresies; but for myself—and I think I can speak for my constituents—I am utterly opposed to repudiation. But the moment allowed me gives me the opportunity to remonstrate against the enunciation of any scheme of legislation which I believe would place my country in a dishonest attitude before the world. Not only do I be-

lieve that we should pay the debt, but I believe, what is of vastly more importance, that the country has the ability, the disposition, and the resources to pay it." In the Forty-second and Forty-third Congresses he served on the Committees on Banking and Currency, Post-Offices and Post-Roads, and Rules, and was one of the most influential members of the minority. His triumphant leadership in the two days' and all night's contest to prevent the "Force bill" from going to the Senate in time for action on it, brought him first into great prominence. When the Democrats came into power at the opening of the Forty-fourth Congress, in December, 1875, Mr. Randall was made chairman of the Committee on Appropriations. He devoted himself to the work of retrenchment, and succeeded in cutting down the appropriations many millions. In giving a summary of what he had accomplished in the way of retrenching, August 14, 1876, he closed with these words: "I believe the real, natural, safe, and permanent way to resumption of specie payments is in the reduction of the expenditures of the Government to what is needed by an economical administration. Human foresight, in my judgment, can not fix the exact hour or day when it shall take place."

On December 4, 1876, Mr. Randall was elected to fill the vacancy in the office of Speaker occasioned by the death of Michael O. Kerr. On taking the chair at that critical time, he said: "We stand in the presence of events which strain and test to the last degree our form of government. Our liberties, consecrated by so many sacrifices in the past, and preserved amid the rejoicings of an exultant people at our centennial anniversary as one among the nations of the earth, must be maintained at all hazard. The people look confidently to your moderation, to your wisdom, in this time fraught with so much peril. Let us not, I beseech you, disappoint their just expectations and their keen sense of right; but by unceasing vigilance let us prevent even the slightest departure from the Constitution and the laws, forgetting in the moment of difficulty that we are the adherents of party, and only remembering that we are American citizens with a country to save." It was greatly owing to his brave and determined spirit in maintaining such sentiments, that the turbulent factions in the House were held in check, and the results of the Electoral Commission quietly acquiesced in. As he expressed it in his valedictory at the close of this Congress, "The Democratic party yielded temporary possession of the administration, rather than entail upon the people civil war with all its attendant horrors."

At the called session of the Forty-fifth Congress, October 15, 1877, he was reelected Speaker. The two years of this Congress were a period of general financial distress and of labor depressed by heavy burdens. He urged that no backward step should be taken in the work of retrenchment, saying, "When the iron rule

of hard necessity darkens every household in the land, extravagance on the part of the people's servants is an unpardonable crime."

At the extra session in March, 1879, he was again elected Speaker of the Forty-sixth Congress.

REFORMED CHURCHES. I. REFORMED CHURCH IN AMERICA (formerly *Reformed Dutch Church*).—The following is a summary of the statistics of the Reformed Church in America as they were reported to the General Synod of 1879: Number of Classes, 32; of churches, 505; of ministers, 546; of communicants, 80,228. One of the Classes, Arcot, with 21 churches, 6 ministers, and 1,106 communicants, is in Asia; the others are in the United States. Number of Sunday-schools, 695, with 79,250 scholars. Amount of contributions for religious and benevolent purposes, \$175,424; for congregational purposes, \$745,502. The Board of Foreign Missions received during the year \$58,443, and paid out \$78,798.

The *General Synod* of the Reformed Church in America met in its seventy-third session at Newark, New Jersey, June 4th. The Rev. A. R. Van Nest, D. D., of Philadelphia, was chosen Moderator. The committee appointed at the previous session on the consolidation of boards presented majority and minority reports. The minority report was adopted. It declared it inexpedient to make any changes in the corporate organizations of the benevolent boards, and recommended continued attention by them to means of reducing expenses as far as may be compatible with the best interests of the objects of their care. Since the constitution of the Church recognizes all baptized persons as members, provision was made to secure the full recognition of baptized children, for the insertion in the statistical tables of the Classes of an additional column of "Total of baptized members," to include such children.

II. REFORMED CHURCH IN THE UNITED STATES.—The following is a summary of the statistics of this Church as they are given in its "Almanac" for 1880:

SYNODS.	Ministers.	Congregations.	Members.	Members unconfirmed.
Synod of the United States.....	204	433	65,607	87,764
Synod of Ohio*.....	162	340	24,560	11,307
Synod of the Northwest*.....	132	292	16,459	18,043
Synod of Pittsburgh*.....	52	114	9,722	7,536
Synod of the Potomac*.....	122	247	26,230	16,223
German Synod of the East.....	42	83	9,183	5,759
Total, six synods.....	714	1,374	151,761	91,637

Number of Classes, 45; of baptisms during the year, 12,336 of infants, 1,005 of adults; of additions by confirmation, 8,426; of Sunday-schools, 1,364, with 94,346 scholars. Amount of contributions for benevolent purposes, \$57,975; for local objects, \$528,506. A foreign mission has been established under the direction of the General Synod in Japan, and was

opened in May, 1879, with one missionary, and his wife as an assistant.

The most important event in the history of this Church during 1879 was the preparation of a declaration of faith designed as a full and final settlement of all differences hitherto existing within its borders. The commission which had been appointed for this purpose (see "Annual Cyclopædia" for 1878, page 720) met at Pittsburgh in November, 1879, and adopted as a basis of harmony a declaration the essential points of which are as follows:

The Reformed Church in the United States unites in the confession of her adherence to the doctrines of the Holy Scriptures, as set forth in the Heidelberg Catechism, taking the same in its historical (or original) sense; and declares that any departure from the same is unauthorized by the Church; and renewedly directs all her ministers, editors, and teachers of theology "faithfully to preach and defend the same." This action is not to be so construed as to forbid or interfere with that [degree of] freedom in scriptural and theological investigation which has always been enjoyed in the Reformed Church.

They agreed further upon the following articles:

I. We recognize in Jesus Christ and his sacrifice for fallen man the foundation and source of our whole salvation.

II. We hold that the Christian life is begotten in us by the Word of God, which is ever living and carries in itself the power to quicken faith and love in the heart, through the Holy Ghost.

III. We do not regard the visible Church as commensurate and identical with the invisible Church, according to the Roman theory, nor do we think that in this world the invisible Church can be separated from the visible, according to the theory of pietism and false spiritualism; but, while we do not identify them, we do not in our views separate them.

IV. We hold that in the use of the holy sacraments the grace signified by the outward signs is imparted to those who truly believe; but that those who come to these holy sacraments without faith receive only the outward elements unto condemnation.

V. We have come to a clear apprehension of the fact that the Christian life is something broader and deeper than its manifestations in conscious experience.

VI. We hold the doctrine of justification through true faith in Jesus Christ, according to which only the satisfaction, holiness, and righteousness of Christ is our righteousness before God, and that we can not receive and apply the same to ourselves in any other way than by faith only.

VII. We hold the doctrine of the ministerial office according to which the ministers of the Church are not lords of faith, but servants, messengers, heralds, watchmen of Christ, co-workers with God, preachers of the Word, and stewards of the mysteries of God.

VIII. We hold the doctrine of the universal priesthood of believers, over against all Romanizing tendencies to priestly power; while we also assert the proper recognition of the ministerial office in the Church of Christ.

IX. We affirm our confidence in the truth of Protestantism, over against the errors of Rome on the one hand, and against the errors of rationalism and infidelity on the other.

X. All philosophical and theological speculations [in the Church] should be held in humble submission to the Word of God, which with its heavenly light should illumine and guide the operations and researches of reason.

The commission also resolved to recommend to the next General Synod to take steps for the

appointment of a committee representative of all the Synods and tendencies in the Church, whose duty it shall be to prepare an order of worship, while, until this shall be regularly adopted, the use of the existing liturgies shall be permitted. It also recommended that the Synod adopt at the proper time measures for the revision of the constitution and the completion of the ecclesiastical system.

III. REFORMED CHURCH OF FRANCE.—An unofficial Synod of the Reformed Church of France was held in Paris from November 25th to December 5th, for the purpose of considering the condition of the Church, and of organizing the orthodox party as a free confederation within the Church recognized by the state. M. J. Pédézet was chosen Moderator. Two parties appeared in the assembly. One, led by M. Bersier, favored a course of conciliation toward the Liberals, and proposed that the Synod hasten and facilitate the convocation of a General Synod, and labor to induce the churches in general to demand it. The other party favored the organization of a regular unofficial Synod without regard to the Liberal party, but without surrendering the hope of securing an official Synod. The latter course was resolved upon, and resolutions were adopted "that, in two years, unless the Reformed Church of France has been placed under its regular synodal régime, a new unofficial Synod be called"; and "that the permanent commission shall convocate a new session of the present Synod before the lapse of two years, if it shall judge that circumstances render it necessary." Regulations were adopted for the formation of particular unofficial Synods in the several conscriptions, and for the choice of delegates to the General Synod. Adhesion to the Confession of 1879 was made an indispensable condition of participation in these acts; but unofficial minorities of churches which have separated from official churches because of their rationalism, and their pastors, as well as official orthodox churches and their pastors, were recognized as constituents of the Synods. The consideration of propositions in reference to measures for bringing on the operation of the regular synodal régime was deferred, and the local unofficial Synods were requested at their next sessions to take the subject into consideration and transmit their wishes to the permanent commission, to be communicated by it to the next Synod. A permanent commission of nine members was appointed, and charged with the duty of executing the decisions of the General Synod, and of convoking its next meeting.

REFORMED EPISCOPAL CHURCH.

The following report of the statistics of this Church was presented to the General Council at its meeting in May and June, 1879: Number of parishes reporting, 70; connected with the same, 10,459 persons; Sunday-school scholars, 8,025; Sunday-school teachers, 787; baptisms, 609; confirmations, 399; received otherwise than by confirmation, 935; total increase,

1,334; communicants, 5,842. Amount reported for current expenses, \$102,068; General and Missionary Fund, \$7,938; Sunday-school offerings, \$4,237; for other benevolent purposes, \$13,585; total, \$127,828. Present value of church property, \$940,536. During the year new congregations have been formed in Wilmington, Del., Detroit, Mich., Indianapolis, Ind., and Cincinnati, O. Six church buildings have been opened and four begun during the year, and 27 ministers have been added to the clergy list, which now numbers—bishops, 6; presbyters, 70; deacons, 24; total, 100.

The seventh *General Council* of the Reformed Episcopal Church met in Chicago, May 28th. Bishop W. R. Nicholson was elected Presiding Bishop for the ensuing year. Differences had prevailed during the year between Bishop Gregg and his associates in Great Britain, threatening to divide the Church in that country. In consequence of them, Bishop Gregg had asked for letters of dismission, but the General Committee had declined to grant them. The action of the General Committee was approved, and the members of the Church in England were advised to meet together in General Synod and "retrace steps"; for the better success of which the Council advised "that all correspondence be mutually surrendered for destruction which bears on the existing differences; that the said Synod be presided over by a temporary presiding officer; that the brethren do then choose a Bishop to preside over their deliberations, and then proceed to organize their Synod and declare abrogated all canons, rules, and regulations which are plainly inconsistent with the principles of this Church, and substitute therefor such others as in the wisdom of the assembled brethren may be determined on as constitutional." The Synod under Bishop Sugden was recognized as the true Synod of the Church in Great Britain. Several alterations in the Prayer-Book, which were chiefly of a verbal character, or intended to make the position of the Church in respect to ritual more clear, were approved for final submission to the next General Council. Two reports from a committee respecting the episcopate came to this meeting from the previous meeting of the General Council. The majority report recommended that the Synods be authorized to nominate their bishops for approval and confirmation by the General Council; the minority report recommended that the right to appoint the bishops be vested in the General Council. The nomination of the Rev. A. S. Richardson by the Synod of Great Britain was confirmed. The Rev. P. F. Stevens was elected Bishop for the special, and the Rev. J. A. Latane for the general, missionary jurisdiction of the South.

The General Synod of the Reformed Episcopal Church in the United Kingdom (under Bishop Gregg), at its meeting held in Sidcup, Kent, in July, 1879, condemned the action of the General Council in America in confirming

the election of Bishop Richardson; declared his election, confirmation, and consecration void and not to be recognized; resolved that the course of the General Council in this matter had created an unexpected and insurmountable "obstacle" to carrying into effect its own recommendation for a compromise between the two branches of the Reformed Episcopal Church in Great Britain; and approved the course which had been pursued by Bishop Gregg as justified by the necessities of the case.

In June, 1879, the Rev. Dr. B. B. Usher, of St. Bartholomew's Church, Montreal, with the congregation of the church, withdrew from connection with the General Council and took steps for uniting with the Reformed Episcopal Church of the United Kingdom under Bishop Gregg. The cause of this action was dissatisfaction with the action of the General Council and the bishops with reference to the Church in Canada. The Presiding Bishop, after examining into the trouble, declaring that a crisis had arisen in the interests of the Church in the Dominion, issued a pastoral letter calling a representative convention of the churches in Canada to meet at Ottawa, July 30th, for the purpose of organizing a Synod and nominating a Bishop. The Convention was attended by the delegates of eleven churches in Nova Scotia, New Brunswick, Ontario, and Quebec. Bishop Latane was chosen to preside. A committee of three presbyters and three laymen was appointed to frame a constitution for a Synod to be submitted to the next meeting of the Convention for approval. The Presiding Bishop and the General Committee were requested "to take steps to have a Bishop elected, or make provision that one of the present bishops be assigned to the special charge and care of the Reformed Episcopal churches in the Dominion of Canada until the proposed Synod for Canada be organized and nominate its own Bishop." A resolution was adopted declaring that the Convention were satisfied to remain in the present position of the Canadian churches with regard to the General Council, and deprecating any separation from the Reformed Episcopal Church as it was originally organized by the late Bishop Cummins. An annual convention of the Canadian churches was decided upon, the next one to be held in the city of Montreal on the last Wednesday of May, 1880, and to be composed of all the clergy of the Church in the Dominion, including deacons who are engaged in church work, and one lay delegate from each parish, with one additional delegate for every fifty communicants in the parish.

REFUNDING THE NATIONAL DEBT. The refunding of the national debt for the purpose of securing a lower rate of interest or extending the period of payment has from time to time engaged the attention of Congress ever since the organization of the Government under the Constitution in 1789.

The Confederation of States which preceded

that organization felt severely its lack of power to levy taxes for the support of the General Government. The Congress of the Confederation on the 18th of April, 1783, urgently recommended to the States the establishment of permanent funds for the liquidation of its debt, or, at least, for the payment of the interest thereon. The scheme recommended was that of clothing "the United States in Congress assembled" with power to levy duties on imported goods, but it was not adopted by the States so as to make it operative. Recourse was then had to requisitions on the States, but, no response being made thereto, both the principal and interest of the debt were left wholly unprovided for.

The debt outstanding in 1789 was made up of foreign and domestic loans contracted under the Confederation, and of the debts of the several States incurred in their individual capacities, on all of which large arrearages of interest had accrued. The unpaid foreign debt contracted by the Confederation consisted of the following loans (all at 5 per cent. except the French loan of 1779, which was at 4):

French loan of 1776.....	\$153,688 89
" " of 1777.....	3,267,000 00
" " of 1779.....	1,815,000 00
" " of 1782.....	1,089,000 00
Spanish loan of 1781.....	174,017 13
Holland loan of 1782.....	2,000,000 00
" " of 1784.....	800,000 00
" " of 1787.....	400,000 00
" " of 1788.....	400,000 00

Total principal.....	\$10,098,706 02
On this there were due arrearages of interest to January 1, 1790, amounting to.....	1,760,277 58

Making a total foreign debt at that date of There was also a debt due foreign officers who had served in the war of the Revolution, for which certificates had been issued amounting to.....	\$11,858,983 60
On these latter there were arrearages of interest to January, 1790, amounting to.....	136,988 73

In all.....	11,995,972 33
-------------	---------------

The estimated principal of the domestic debt at that time amounted to.....	\$23,858,180 65
On this the arrearages of interest amounted, as nearly as can be estimated, to.....	11,803,621 80

Total domestic debt.....	\$30,256,802 45
--------------------------	-----------------

There were also several arrears and claims against the late Government, outstanding and subsequently discharged, amounting to.....	\$450,395 52
--	--------------

All these different sums made the entire debt of the United States on January 1, 1790....	\$62,764,339 67
---	-----------------

In addition to this debt there were the individual debts of the several States, which had been incurred in the common defense of the country, the precise amount and character of which could not be then ascertained. It was estimated by Hamilton at that time to be in the aggregate about \$25,000,000.

On the 21st of September, 1789, the House of Representatives resolved as follows: "That the House considers an adequate provision for the support of the public credit as a matter of high importance to the national honor and prosperity." The Secretary of the Treasury was accordingly directed to prepare a plan for such

provision and report it to the House at the next session. In obedience to the resolution, on the 9th of January, 1790, Alexander Hamilton, then Secretary of the Treasury, transmitted to the House the first of his famous reports on the public credit, in which he recommended that the entire indebtedness, both State and general, be consolidated into a new loan of such character and upon such conditions as would maintain unquestioned the good faith of the nation, and make no change in the rights of the creditors without their consent. The adoption of the new Constitution, coupled with the belief at home and abroad that some satisfactory provision would be made for the several debts, had already caused a great advance in their market value, to the advantage of the holders, many of whom had paid therefor a less sum than the arrearages of interest amounted to. Notwithstanding this advance in value, there was but little opposition to providing for the domestic debt, and there had been none to paying the foreign; but the proposed assumption by the Union of the State debts met with bitter criticism and created much angry feeling, as some of the States were largely indebted to the General Government, while others had balances due therefrom, and no plan was proposed for an equitable adjustment of these differences. The recommendations of the Secretary, though once rejected by the House, were finally adopted, and were embodied in the act approved August 4, 1790, which provided for the refunding of the debts in the following manner:

For the payment of the foreign debt and the interest thereon, the President was authorized to borrow a sum not exceeding \$12,000,000, the right to reimburse the amount within fifteen years being reserved; and under this authority the following loans were issued:

Loan of 1790, Holland.....	\$1,200,000
" of March, 1791, Holland.....	1,000,000
" of September, 1791, Holland.....	2,400,000
" of November, 1791, Antwerp.....	820,000
" of December, 1791, Holland.....	1,200,000
" of August, 1792, Holland.....	1,180,000
" of 1793, Holland.....	400,000
" of 1794, Holland.....	1,200,000
Total.....	\$9,400,000

These loans bore interest at various rates, some 4, some 4½, and some 5 per cent., and were made payable by installments in from ten to fifteen years from the date of their issue. The net rates realized on them varied from 94½ to 96½ per cent.

For the payment of the domestic debt a loan to its full amount was authorized, payable in the different certificates and bills of credit which had theretofore been issued by the General Government in settlement of the principal and interest of the indebtedness which had been incurred for the expenses of the war of independence. The stock issued upon this loan was of three kinds: 1. Stock in an unspecified amount bearing interest at 6 per cent. per annum, and subject to redemption by payments not exceeding in one year, on account of prin-

cipal and interest, the proportion of eight dollars upon a hundred of the sums mentioned in the certificates of stock issued. This part of the loan was commonly known as the "six per cent. stock of 1790." 2. Stock in an unspecified amount bearing interest after the year 1800 at 6 per cent. per annum, and subject to redemption in the same manner and at the same rates as the preceding class. This stock was known as the "deferred six per cents." 3. Stock also in an unspecified amount bearing interest at 3 per cent. per annum, subject to redemption whenever provision should be made by law for that purpose. This was known as the "three per cent. stock." It will be seen that the six per cent. stock and the deferred stock were each in fact an annuity of eight dollars for a period of twenty-three years and some months. Of such sums as were subscribed to the loan, and paid in government certificates and bills of credit representing the principal of the domestic debt, subscribers were to receive two thirds in the "six per cent. stock of 1790," and one third in the "deferred six per cents." For such sums as were subscribed to the loan and paid in the interest of the domestic debt computed to December 31, 1790, or in indents of interest, subscribers were to receive "three per cent. stock" in the full amount so subscribed and paid. For the payment of the assumed State debts a loan of \$21,500,000 was authorized, payable by the subscribers in the principal and interest of the State certificates to the amounts set forth in the table below, which shows the amount authorized to be issued in the redemption of the debt of each State, and the amounts actually issued. Of sums subscribed to the last-mentioned loan and paid in the principal and interest of the State certificates, the subscribers were to receive four ninths in "six per cent. stock of 1790," two ninths in "deferred six per cents," and three ninths in "three per cent. stock." The law also provided that books for subscriptions to the stock issued for the redemption of the domestic and assumed debt should be open for one year from October 1, 1790, and fixed a limit (stated in the table below) to which the assumed debt of each State would be received for the new stock issued.

The conversions authorized were rapidly made, and thus were completed the first funding operations of the Government; and while perhaps in the assumption of the State debts exact justice was not done in every instance, the plan is generally conceded to have been as equitable as any proposed. The honorable and satisfactory adjustment of these debts raised the credit of the country at home and abroad, and gave the young republic an enviable reputation for a far-seeing and honest public policy.

Under this authority there were issued of the several stocks amounts as follows:

Of six per cents.....	\$30,098,897 75
Of deferred six per cents.....	14,649,323 76
Of three per cents.....	19,718,751 01
Total.....	\$64,456,477 52

The following table shows the amount authorized to be assumed in the redemption of the debt of each State, and the amount assumed:

STATES.	Amount authorized.	Amount assumed.
New Hampshire.....	\$300,000 00	\$252,565 51
Massachusetts.....	4,000,000 00	3,951,733 05
Rhode Island.....	200,000 00	200,000 00
Connecticut.....	1,600,000 00	1,600,000 00
New York.....	1,200,000 00	1,158,716 69
New Jersey.....	600,000 00	695,202 70
Pennsylvania.....	2,200,000 00	777,938 45
Delaware.....	200,000 00	59,161 65
Maryland.....	800,000 00	517,491 03
Virginia and Kentucky..	3,500,000 00	2,934,416 00
North Carolina.....	2,400,000 00	1,798,808 85
South Carolina.....	4,000,000 00	3,999,651 73
Georgia.....	800,000 00	246,090 73
Total.....	\$21,500,000 00	\$13,271,767 47

While the stock issued under this act was exchanged at par for the several issues mentioned, the holders of the domestic debt and debts of the States did not in fact obtain par in coin for the stocks converted by them into the new issue, as the market value of the latter did not at once reach par. From the purchases which were made from time to time by the Sinking Fund Commissioners, the following table has been prepared, showing the approximate market value of \$100 of these issues from 1790 to 1795 inclusive:

DATE.	Six per cents.	Six per cents deferred.	Three per cents.
December, 1790.....	\$70 00	\$30 00	\$31 00
December, 1791.....	90 00	45 00	45 00
April, 1792.....	100 00	62 50	60 00
April, 1793.....	87 50	53 00	50 00
December, 1793.....	95 00	57 50	51 00
May, 1794.....	90 00	56 00	50 00
April, 1795.....	100 00	69 00	60 00

It will be noticed that of the amount of \$12,000,000 of foreign loan authorized to be issued, only \$9,400,000 was sold, and that was sold at a discount, as has been stated, of from 3 to 5½ per cent. As a considerable portion of the proceeds was necessarily applied to the extinguishment of accumulated interest, they were not sufficient to complete the redemption of the amount outstanding; and on January 20, 1795, the entire foreign debt was found to be \$13,745,379.53—an increase since 1790 of \$1,837,221.51. Mr. Hamilton, therefore, asked authority to issue an additional loan for the purpose of funding that amount, which authority was given by Congress in an act approved March 3, 1795. This act authorized the issue of a loan receivable by way of exchange in equal sums of the principal of the foreign debt, and provided that any sum so subscribed and paid should bear interest equal to the rate of interest which was then payable on the principal of the foreign debt so exchanged, together with an addition of one half per centum per annum, this extra interest being added for the purpose of inducing parties to surrender the certificates of indebtedness which they then held.

It appears that no arrangement could be effected for refunding the portion of the debt

held in Holland; but for that held in France a new loan was issued as follows: five and a half per cent. stock, \$1,848,900; four and a half per cent. stock, \$176,000; in all, \$2,024,900. The issue of this stock closed the account of the French debt, which by these transactions became merged in the domestic debt of the United States. Redemptions of the remainder of the foreign debt began in the year 1807, and were completed in 1815.

The next refunding operation of the Government was in 1807.

On January 1, 1806, there remained outstanding of the old six per cent. and deferred stocks about \$31,800,000, and of the three per cents (nominal value) about \$19,050,000; total, \$50,850,000. Of these stocks the six per cent. and deferred were redeemable at the annual rate of eight dollars per hundred of principal and interest, as before stated. Under this arrangement these stocks sold in England, where a very large proportion of them was held, at about 95 per cent. on the unredeemed amount of each certificate, while the three per cents, which were redeemable at the pleasure of the Government, had a market value of about 60 per cent. of their nominal value. Secretary Gallatin in 1807 proposed that in exchange for all these stocks a common six per cent. stock should be offered to the public creditors; the old six per cent. and deferred stocks to be received at the par value of the unredeemed amount, and the three per cents at about 60 per cent. He thought the exchange would be advantageous to creditors, because, instead of receiving as they did quarter-yearly a small reimbursement of their capital, which was in effect a long annuity, they would by the exchange receive the whole amount within a much shorter time; and because an annuity for a term of years was always worth less in market than its intrinsic value, as exemplified by the market-rate of every lease or estate less than an absolute fee. He thought the exchange would also be advantageous to the United States, because the Government would thereby be enabled to reimburse the whole in less than nine years, instead of eighteen; and also because, if circumstances should render a resort to new loans necessary, the terms on which these could be obtained would in a considerable degree depend on the price of existing stocks. It was therefore desirable that that species the price of which had a tendency to regulate that of all others should be as high as circumstances would admit, and, as has been stated, the six per cent. and deferred stocks sold at less than their intrinsic value. A conversion of the three per cent. stocks, however, could not be so easily effected, they being worth more in market than a six per cent. stock producing the same annual amount; and it would therefore be necessary for the United States in converting this stock to make some sacrifices.

A law for the purpose mentioned was approved February 13, 1807. It provided that a

subscription should be opened in the United States and at London and Amsterdam, to the full amount of the old six per cent. deferred and three per cent. stocks. For subscriptions in the old sixes or deferred stocks, a new six per cent. stock was to be issued for the par value of the unredeemed amount of each certificate. The interest on the new stock was to be payable quarterly, and the stock was to be subject to redemption at the pleasure of the United States. No partial reimbursement was to be made on any certificate, and six months' public notice was to be given of any intended reimbursement. For subscriptions in three per cent. stock, certificates equal to 65 per cent. of its principal were to be issued, bearing an interest of 6 per cent. payable quarterly, and reimbursable only with the assent of the holder, and after all the eight and four and a half per cent. stocks, as well as the stock to be issued by virtue of the act in exchange for the old six per cent. and deferred stocks, had been redeemed. It will be observed that the act created two kinds of stocks, one reimbursable at the pleasure of the United States, the other only after a certain period and with the assent of the holder. To distinguish these stocks, the first were called "exchanged," the other "converted," six per cents. There was issued of the "exchanged" sixes, \$6,294,051.12; of the "converted," \$1,859,850.70; total, \$8,153,901.82. It would appear that the great majority of the holders of the old stocks preferred them to the new, and the plan to refund was a partial failure.

The next refunding took place in 1812.

It seems that by an act approved March 14, 1812, Congress had authorized the issue of a loan of \$11,000,000 at not less than par, the certificates therefor to bear interest at 6 per cent., and the proceeds to be applied to defraying current expenses. On June 24, 1812, Secretary Gallatin reported that of this loan but \$6,460,000 had then been subscribed, including \$200,000 offered on special contract, but not up to that time accepted. He said that the result of the loan was more than doubtful. "The old six per cent. and deferred stocks," he said, "are two or three per cent. under par, and any depression in the public funds would seriously affect the sales of the residue of the new loan. Nor does it appear eligible without an absolute necessity to give a premium or additional interest in order to obtain subscriptions for that residue. For, as it would be just in that case to place the first subscribers on the same footing, the charge to the public would be more than double the premium actually wanted to obtain the four and a half millions which are not yet subscribed." He therefore suggested a conversion of the old six per cent. and deferred stocks into a new six per cent. stock not materially different from that created by virtue of the act authorizing the loan of eleven millions. This he thought would have a favorable effect on the price of those stocks, and

thereby facilitate the loan of that year, and prevent the necessity of applying in that and subsequent years the large sums which must otherwise be expended in the reimbursement and purchase of the public debt.

An act for the purpose of effecting a conversion of the old six per cent. and deferred stocks, as recommended by the Secretary, was approved July 6, 1812. It provided that a subscription to the full amount of the old six per cent. and deferred stocks should be proposed to the proprietors thereof, for which purpose books were to be opened at the Treasury and the offices of the Commissioners of Loans on the 1st day of October next ensuing, to continue open until March 17, 1813, the fourteen last days of each quarter excepted. For such part of the amount of the old six per cent. and deferred stocks subscribed and surrendered as should remain unredeemed on the day of subscription the subscribers were to receive certificates of United States stocks, bearing interest of 6 per cent. per annum, payable quarterly, from the first day of the quarter in which the subscription was made. The certificates were to be reimbursable at the pleasure of the United States at any time after December 31, 1824; but no reimbursement was to be made except for the whole amount of stock standing at the time to the credit of any one proprietor, nor until after at least six months' public notice of the intended reimbursement. Nothing in the act was to be construed to alter, abridge, or impair the rights of those creditors of the United States who did not subscribe for the exchanged stock. Under this act \$2,984,746.72 were subscribed in old six per cent. and deferred stocks, and exchanged for certificates of the new stock.

The next effort in refunding was an abortive attempt in 1822 to exchange a stock bearing an interest of 5 per cent. for a part of the six and seven per cents due in the years 1825 and 1826. The stocks due and redeemable in those years amounted altogether to the sum of \$39,819,700, a sum far beyond the capacity of the surplus revenues to meet; and the Secretary of the Treasury, W. H. Crawford, therefore proposed, in his report of December 21, 1821, to offer in exchange for \$24,000,000 in these stocks a stock bearing a lower rate of interest and having a longer time to run. He said: "As the current value of the five per cent. stock created during the last and present years exceeds that of the seven per cent. stock, and of the six per cent. stocks of 1812 and 1813, it is presumed that the holders of these stocks will be disposed to exchange them for an equal amount of five per cent. stock, redeemable at such periods as to give full operation to the sinking fund as at present constituted. According to this view of the subject, twenty-four millions of the stocks which will be redeemable in the years 1825 and 1826 may be exchanged for five per cent. stock, redeemable, one third on the 1st of January, 1831, and one third on the same days of 1832 and 1833. This ex-

change of six per cent. stock, if effected on the 1st of January, 1823, will produce an annual reduction of the interest of the public debt, from that time to the first-mentioned period, of \$240,000, and an aggregate saving through the whole period of \$2,160,000. If the whole of the seven per cent. stock should be exchanged, the saving will be considerably increased."

An act to authorize the issue of a five per cent. stock to be exchanged for those bearing an interest of 6 and 7 per cent. was approved April 20, 1822. It authorized the opening of a subscription to the amount of twelve millions of dollars of the seven per cent. stock and of the six per cent. stock of 1812, and for fourteen millions of six per cent. stocks of the years 1813, 1814, and 1815. For the six per cent. stocks of the years 1812, 1813, 1814, and 1815, subscribed and transferred to the United States, the subscribers were to receive certificates of United States stock bearing an interest of 5 per cent. payable quarterly, reimbursable one third at any time after December 31, 1830, one third at any time after December 31, 1831, and the remainder at any time after December 31, 1832. For the sums subscribed in the seven per cent. stock, certificates were to be issued bearing an interest of 5 per cent. payable quarterly, redeemable at the pleasure of the United States at any time after December 31, 1833. The funds pledged by law for the payment of the interest and principal of the stocks which might be subscribed or exchanged were to remain pledged to pay the interest and redeem the principal of the stock to be created under this act. The Commissioners of the Sinking Fund were to pay out of the said fund the interest which might become due on the stock, and to purchase the certificates from time to time as they purchased other evidences of the public debt; and so much of the fund as might be necessary was appropriated for the redemption, and was to continue appropriated until the whole of the stock created was reimbursed. Nothing in the act was to be construed to alter, abridge, or impair the rights of such public creditors as did not subscribe.

This attempt to effect an exchange of stocks almost entirely failed, as only a very small sum was subscribed and exchanged for the five per cent. stock. The Secretary, in his report on the state of the finances for 1823, said that the entire amount exchanged under the act had been \$56,704.77, as follows:

Six per cent. stock of 1813 (first loan)....	\$23,317 83
Six per cent. stock of 1813 (second loan)..	23,386 95
Six per cent. stock of 1814 (first loan)....	8,000 00
Six per cent. stock of 1814 (second loan)..	7,000 00
In all.....	\$56,704 77

The next refunding transactions occurred in 1824.

The Secretary of the Treasury, W. H. Crawford, in his report to the Senate December 31, 1823, gave a very favorable view of the public finances, estimating the revenue of 1824 at \$18,550,000, and the balance which would be

in the Treasury January 1, 1825, at \$9,792,716.-41. He said: "Under existing laws there is no probability that any portion of the balance remaining in the Treasury on the 1st of January, 1824, or of the surplus which may accrue during that year, can be applied to the discharge of the public debt until the 1st of January, 1825; yet it is not deemed conducive to the general prosperity of the nation that so large an amount should be drawn from the hands of individuals and suffered to lie inactive in the vaults of the banks. On the other hand, the high rate of interest of the great amount of debt which becomes redeemable on the 1st of January, 1825, renders it inexpedient for the Government to apply to other objects any portions of the means which it may possess of making so advantageous a reimbursement. It is believed, however, that every inconvenience may be obviated if authority be given for the purchase of the seven per cent. stock, amounting to \$8,610,000, during the year 1824, at such rates as may be consistent with the public interest. As it is now certain that the Government will possess ample means to redeem that stock on the 1st of January, 1825, it is presumed that the holders will be willing to dispose of it during the interval at a fair price; and as a gradual conversion of it into money, at such times and in such portions as would be most favorable to its reinvestment, would be most advantageous to the moneyed transactions of the community, it is presumed that it would be most acceptable to the holders." He therefore recommended that the Commissioners of the Sinking Fund should be authorized to purchase the seven per cent. stock during the ensuing year at the following rates above the principal of the sum purchased: 1. For all stock purchased before the 1st of April following, at a rate not exceeding \$1.25 on every \$100, in addition to the interest due on such stock on that day. 2. For all stock purchased between the first of April and the last of July, at a rate not exceeding 75 cents on every \$100, in addition to the interest due on the last-mentioned day. He stated that of the \$10,331,000 of six per cent. stock redeemable in 1825, about \$5,000,000 would probably be redeemed in that year, and there would remain unredeemed, after the application of all the means at the disposal of the Commissioners of the Sinking Fund, about \$5,331,000. This sum he thought might be readily exchanged for five per cent. stock redeemable in 1833, and he recommended that provision should be made by law for such an exchange of so much of the six per cent. stock as should not be redeemed during the year 1825.

An act to authorize the exchange of certain stocks was approved May 26, 1824. It authorized the President to borrow on the credit of the United States, on or before April 1, 1825, a sum not exceeding five millions of dollars at a rate of interest not exceeding $4\frac{1}{2}$ per cent., and reimbursable at the pleasure of the

Government at any time after December 31, 1831; the money borrowed to be applied, together with the money in the Treasury, to pay off and discharge such part of the six per cent. stock of the year 1812 as was redeemable after January 1, 1825. The Bank of the United States was to be allowed to lend the money or any part thereof, and the Secretary of the Treasury was authorized to raise the money by selling certificates of stock, not under par. Section 3 proposed a subscription to the amount of fifteen millions of dollars in the six per cent. stock of the year 1813, for which purpose books were to be opened at the Treasury and the several loan offices respectively, the subscription to be effected by a transfer to the United States of the credits standing to the subscribers on the books, and by a surrender of the certificates of stock subscribed. For the whole or any part of the sum so subscribed and transferred, certificates of stock were to be issued bearing an interest of $4\frac{1}{2}$ per cent., and reimbursable at the pleasure of the United States, one half at any time after December 31, 1832, and the remainder at any time after December 31, 1833. The same funds already pledged by law for the payment of the interest and the reimbursement of the principal of the six per cent. stocks of 1812 and 1813 was to remain pledged for the payment of the principal and interest of the stocks to be created under this act; and it was made the duty of the Commissioners of the Sinking Fund to cause to be applied annually such sums as might be necessary to discharge the interest. Nothing contained in the act was to be construed to impair the rights of such creditors of the United States as did not choose to subscribe to the loans. Under this act \$5,000,000 were borrowed at par, and under section 3 of the act the sum of \$4,454,727.94 was subscribed in six per cent. stock, and exchanged for stock bearing an interest of $4\frac{1}{2}$ per cent.

Another attempt at refunding was made in 1825.

Upon the convening of Congress in December, 1825, the amount of the public debt was stated to be \$88,545,003.38, redeemable as follows:

In 1825, of six per cents.....	\$7,654,570 98
In 1826, of six per cents of 1813.....	19,002,856 62
In 1827, of six per cents of 1814.....	18,001,437 68
In 1828, of six per cents.....	9,490,099 10
In 1831, of five per cents.....	18,901 59
In 1832, of four and a half per cents.....	5,000,000 00
In 1832, of five per cents.....	1,018,000 72
In 1833, of four and a half per cents.....	6,654,153 72
In 1838, of five per cents.....	18,901 59
In 1844, of four and a half per cents.....	1,654,153 73
In 1835, of five per cents.....	4,735,296 80
At pleasure, five per cents.....	7,000,000 00
At pleasure, three per cents.....	13,296,281 45

By this statement it appears that, in the years 1829 and 1830, no part of the public debt was reimbursable excepting \$7,000,000 five per cents and the three per cents; but, as these bore a less interest than that portion of the six per cents of 1813 which was redeemable on the 1st of January, 1826, and

which, for the want of means, it was thought could not be reimbursed before the years 1829 and 1830, the Committee of Ways and Means believed it advisable to provide for that portion by a new stock, at a reduced rate of interest and payable at those periods. The committee therefore recommended a new loan, or an exchange to the amount of \$12,000,000, at a rate of interest not exceeding $4\frac{1}{2}$ per cent., reimbursable in equal portions in the years 1829 and 1830.

An act for this purpose was approved March 3, 1825. The first section authorized the President to borrow on the credit of the United States a sum not exceeding \$12,000,000, at not exceeding $4\frac{1}{2}$ per cent. interest, \$6,000,000 of the principal to be reimbursable at the pleasure of the Government at any time after December 31, 1828, and \$6,000,000 at any time after December 31, 1829, the money borrowed to be applied to redeeming such part of the six per cent. stock as was reimbursable after January 1, 1826. The Bank of the United States was to be permitted to lend the sum or any part thereof, and the Secretary of the Treasury was authorized to raise the money by selling certificates of stock, not under par. Section 3 proposed a subscription to the amount of \$12,000,000 of the six per cent. stock of the year 1813, all subscriptions in this stock to be counted as a part of the \$12,000,000 authorized by the act to be borrowed. For the whole or any part of the sum subscribed in money or six per cents, certificates of stock were to be issued at not exceeding $4\frac{1}{2}$ per cent. interest, payable quarterly, and reimbursable as provided for in the first section. The same funds already pledged by law for the payment of the interest and the reimbursement of the principal of the stock which might be redeemed or exchanged, were to remain pledged for payment of the interest and the reimbursement of the principal of the stock created under this act.

The low rate of interest offered made this loan a failure, as far as borrowing money was concerned, and the amount of stock exchanged under the act was comparatively small. The Secretary of the Treasury, in his report of December 22, 1825, says: "The proper measures were taken to execute this act, but have prevailed only to a limited extent. The operation of exchange, which was first resorted to, took effect to the amount of \$1,585,138.88, and this sum, divided into equal parts, forms the two sums that now stand in the general table of the debt as redeemable in the years 1829 and 1830, while they have also served to diminish by so much the six per cent. stock of 1813. Proposals for the residue of the sum wanted were next issued, but no offers were received. The causes of the failure, it may be presumed, were the low rate of interest and short periods of redemption held out by the act, in conjunction with an activity in the commercial and manufacturing operations of

the country affording higher inducements to the investment of capital."

Under this act stock was issued in the amount of only \$1,539,336.16.

With these transactions the refunding operations of the Government closed, not to be renewed again for many years. The outstanding debt continued to be reduced by redemptions from the surplus revenues, until in 1836 it was practically extinguished. Subsequently, however, owing to insufficient revenues and the extraordinary expenses caused by the Mexican war, a new debt was incurred, amounting on June 30, 1861, to \$90,580,873.72.

The unprecedented expenses incurred in the war of secession, during the four years from 1861 to 1865, were partly met by the imposition of heavy taxes, but largely by the issue of loans bearing various rates of interest and having different periods to run. Some of the earlier loans were redeemed from the proceeds of loans subsequently issued.

On August 31, 1865, when the debt reached its highest point, the interest-bearing debt was made up of loans bearing interest as follows:

Four per cents.....	\$613,127 93
Five per cents.....	269,175,727 65
Six per cents.....	1,231,786,439 83
Seven and three tenths per cents..	530,000,000 00

Total interest-bearing debt.... \$2,851,580,294 96

Some of these bonds were paid off, and others were converted into the five-twenty consols of 1865, 1867, and 1868, bearing 6 per cent. interest.

On March 18, 1869, Congress passed an act to strengthen the public credit, in which it is declared that "the faith of the United States is solemnly pledged to payment in coin or its equivalent of all its interest-bearing obligations, except in cases where the law authorizing their issue has expressly provided that the same may be paid in lawful money or other currency than gold and silver; but none of such interest-bearing obligations not already due should be redeemed or paid before maturity, unless at such time United States notes should be convertible into coin at the option of the holder, or unless at such time bonds of the United States bearing a lower rate of interest than the bonds to be redeemed could be sold at par in coin." This act had the effect of improving the credit of the country, and, as it was believed that the outstanding debt might be refunded into bonds bearing a lower rate of interest, the matter was thoroughly discussed in the succeeding Congress, and an act for the purpose was approved July 14, 1870, entitled "An act to authorize the refunding of the national debt," of which the following is a copy:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized to issue, in a sum or sums not exceeding in the aggregate two hundred million dollars, coupon or registered bonds of the United States, in such form as he may prescribe, and of denominations of fifty dollars, or some multiple of that sum, redeem-

able in coin of the present standard value, at the pleasure of the United States, after ten years from the date of their issue, and bearing interest, payable semi-annually in such coin at the rate of five per cent. per annum; also a sum or sums not exceeding in the aggregate three hundred million dollars of like bonds, the same in all respects, but payable at the pleasure of the United States after fifteen years from the date of their issue, and bearing interest at the rate of four and a half per cent. per annum; also a sum or sums not exceeding in the aggregate one thousand million dollars of like bonds, the same in all respects, but payable at the pleasure of the United States after thirty years from the date of their issue, and bearing interest at the rate of four per cent. per annum; all of which said several classes of bonds and the interest thereon shall be exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority; and the said bonds shall have set forth and expressed upon their face the above specified conditions, and shall, with their coupons, be made payable at the Treasury of the United States. But nothing in this act, or in any other law now in force, shall be construed to authorize any increase whatever of the bonded debt of the United States.

SECTION 2. *And be it further enacted*, That the Secretary of the Treasury is hereby authorized to sell and dispose of any of the bonds issued under this act, at not less than their par value for coin, and to apply the proceeds thereof to the redemption of any of the bonds of the United States outstanding, and known as five-twenty bonds, at their par value, or he may exchange the same for such five-twenty bonds, par for par; but the bonds hereby authorized shall be used for no other purpose whatsoever. And a sum not exceeding one half of one per cent. of the bonds herein authorized is hereby appropriated to pay the expense of preparing, issuing, advertising, and disposing of the same.

Sec. 3. *And be it further enacted*, That the payment of any of the bonds hereby authorized after the expiration of the said several terms of ten, fifteen, and thirty years, shall be made in amounts to be determined from time to time by the Secretary of the Treasury, at his discretion, the bonds so to be paid to be distinguished and described by the dates and numbers, beginning for each successive payment with the bonds of each class last dated and numbered; of the time of which intended payment or redemption the Secretary of the Treasury shall give public notice, and the interest on

the particular bonds so selected at any time to be paid shall cease at the expiration of three months from the date of such notice.

Sec. 4. *And be it further enacted*, That the Secretary of the Treasury is hereby authorized, with any coin of the Treasury of the United States which he may lawfully apply to such purpose, or which may be derived from the sale of any of the bonds, the issue of which is provided for in this act, to pay at par and cancel any six per cent. bonds of the United States of the kind known as five-twenty bonds, which have become or shall hereafter become redeemable by the terms of their issue. But the particular bonds so to be paid and canceled shall in all cases be indicated and specified by class, date, and number, in the order of their numbers and issue, beginning with the first numbered and issued, in public notice to be given by the Secretary of the Treasury; and in three months after the date of such public notice the interest on the bonds so selected and advertised to be paid shall cease.

On January 20, 1871, an act was approved amending the above, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the amount of bonds authorized by the act approved July fourteen, eighteen hundred and seventy, entitled "An act to authorize the refunding of the national debt," to be issued bearing five per centum interest per annum, be, and the same is, increased to five hundred millions of dollars, and the interest of any portion of the bonds issued under said act, or this act, may, at the discretion of the Secretary of the Treasury, be made payable quarter-yearly: *Provided, however*, That this act shall not be construed to authorize any increase of the total amount of bonds provided for by the act to which this act is an amendment.

At that time there was considerable doubt as to the ability of the Government to sell any of the bonds on the terms fixed by the law, as the six per cent. bonds which bore interest in coin were still selling in the market at considerably below par.

On February 28, 1871, the interest-bearing debt of the Government consisted of the following:

Statement showing the condition of the interest-bearing debt of the United States, as shown by the books of the Treasury Department, on the close of business, February 28, 1871.

TITLE OF LOAN.	Authorizing act.	Rate per cent.	When redeemable.	When payable.	Amount.
Loan of 1858.....	June 14, 1858.....	5	Jan. 1, 1874 ..	\$20,000,000

Consols of 1868.....	March 8, 1865.....	6	After July 1, 1873 ..	July 1, 1888 ..	89,668,750
Total.....	\$1,922,843,700

The table on page 759 shows the market price in coin, less accrued interest, of the various securities of the United States Government from 1869 to January 1, 1879, inclusive, and is instructive as showing the state of the public credit at the dates specified. It will be seen that at the time of the passage of

the refunding act, July, 1870, the five-twenty bonds of 1862, which had been redeemable longer than any other class of bonds, and which would naturally be called in first, were worth in the market only \$93.30 for each \$100. The refunding act authorized the sale of the five per cents at not less than par, and it was

Statement showing the market price, less accrued interest, of any, of the various securities of the United States Government for January and July of each year from 1869 to 1879, inclusive.

Legal-tender notes*.	Feb. 25, 1862.	

* By the act of January 14, 1875, these notes were made redeemable January 1, 1879.

evident that until the credit of the country could be considerably advanced no successful steps toward refunding under this law could be taken. It will also be seen by that table that, after the passage of the act of March 18, 1869, the market value of United States securities uniformly and rapidly increased. So rapid was this advance that, in February, 1871, it was believed that sales of five per cents could be made; and, accordingly, on the 28th of that month Secretary Boutwell gave public notice that on and after the 6th of the following March books would be opened in this country and in Europe for subscriptions to the bonds issued under the refunding act. All the national banks in this country, and a large number of bankers both here and in Europe, were authorized to receive subscriptions. On the 1st of August following, the subscriptions to the new five per cent. loan amounted to \$65,775,550, mainly made by national banks, and a like amount of six per cent. bonds was retired.

Early in that month an agreement was entered into with certain bankers in Europe and in the United States, by the terms of which the parties subscribing had a right to subscribe for the remainder of \$200,000,000 of said bonds, by giving notice thereof at any time previous to the 1st of April next succeeding, and by subscribing for \$10,000,000 at once, and an average of at least \$5,000,000 of bonds per month during the intervening time, subject to the right of the national banks to subscribe for \$50,000,000 within sixty days from the 25th day of August. It was also agreed that the subscriptions should be made through national banks, and that certificates of deposit therefor might be issued by said banks to the Secretary of the Treasury; that the bonds should be lodged with the Treasurer of the United States to the amount of the deposit; and that the banks should be made depositaries for this purpose under the provisions of the national banking act. Under this arrangement was initiated the plan by which the Government paid interest on the bonds called in and interest on the bonds issued for a period not exceeding three months in any one case. Secretary Boutwell, in his annual report to Congress for 1871, explained the transaction as follows:

By the act establishing the national banking system the Secretary of the Treasury was authorized to make them depositaries of any public money, except receipts from customs; and the act authorizing the refunding of the national debt directed the Secretary of the Treasury to give three months' notice of the payment of any bonds which, in such notice, might be specified and called for payment. In the same act it was provided that the money received for the new bonds should be used only in payment of bonds outstanding, known as five-twenty bonds. The statute proceeded upon the idea that the holders of five-twenty bonds should receive three months' interest upon their bonds after notice should be given by the Government. As this notice could be given safely only upon subscriptions already made or secured, the general necessary result, even in case the money were paid into and held

in the Treasury of the United States, would be a loss of interest for three months.

It was further agreed that the subscribers should receive as commissions whatever might remain of the half of one per cent. allowed by law upon the \$200,000,000 after paying the cost of preparing and issuing the bonds. Under this contract the remainder of the \$200,000,000 offered was sold, and the transactions were completed before the 1st of April, 1872.

On January 23, 1873, Secretary Boutwell made another contract with certain bankers, in which they agreed to take at least \$10,000,000 of the five per cent. bonds, with a right to subscribe for the remaining \$300,000,000. The other conditions of the contract were substantially the same as those of the agreement above mentioned.

Under the contract there were sold by Secretary Boutwell \$50,000,000 of the five per cent bonds.

This arrangement appears to have been continued by Secretary Richardson, Mr. Boutwell's successor, who during his term of office sold under its provisions \$51,494,700 of the five per cents, and also sold in June, 1874, to other parties, by special agreement, for one fourth of one per cent. commission, an additional \$6,000,000 of the five per cent. bonds, the subscribers to pay the accrued interest to date of the maturity of the bonds called against their subscriptions, for all of which six per cent. bonds were retired. He also, under the act of December 17, 1873, issued of the five per cents \$13,957,000 in exchange for an equal amount of the five per cent. loan of June 14, 1853.

On the 2d of July, 1874, Secretary Bristow, successor to Secretary Richardson, invited sealed proposals for the balance of the five per cents which remained unsold, \$178,548,300, and in response thereto received various bids aggregating in amount \$75,933,550. Of these bids there were accepted \$10,113,550, at par and above. The proposition of an association of bankers was also accepted for the negotiation of \$45,000,000 of the bonds, with an option for the balance of the loan; the subscribers to pay par and interest accrued to *date of maturity of each call*, the calls to be of even date with the subscription, and a commission of one fourth of one per cent. to be allowed upon the amount taken, the parties subscribing to pay all expenses incurred in preparing and issuing the bonds. The bonds were taken in accordance with the contract. The contract was renewed January 29, 1875, with conditions slightly modified, so that the contracting parties were allowed a commission of one half of one per cent. instead of one fourth of one per cent.; and under its terms the balance of five per cents was sold, and for the entire sales a like amount of six per cents was retired.

The entire amount of five per cents authorized by the refunding act having been thus disposed of by Secretary Bristow, Secretary

Morrill, his successor, on the 24th of August, 1876, entered into a contract with certain bankers for the sale of the \$300,000,000 of four and a half per cents for refunding purposes, the parties to be allowed one half of one per cent. commission upon the amount they might take, they to assume and defray all expenses incurred in the preparation and issue of the bonds. Under this arrangement there were sold up to March 4, 1877, when Mr. Morrill's term of office expired, about \$90,000,000, for which an equal amount of six per cent. bonds was called.

The credit of the country now rapidly advanced, and on April 6th Secretary Sherman, who had succeeded Mr. Morrill, addressed a letter to the associated bankers who had the contract for four and a half per cent. bonds, in which he announced that when the sales reached \$200,000,000 he proposed to withdraw the bonds from the market. At that time the four and a half per cents were somewhat below par in Europe, and but little above par in this country. They continued, however, to appreciate, and before the 1st of July the whole \$200,000,000 were taken, of which \$185,000,000 were applied to refunding, and \$15,000,000, by the consent of the contracting parties given on the 11th of May, to resumption purposes.

On the 9th of June, 1877, a contract was made with certain bankers for the sale of four per cent. bonds, with a proviso that the loan should be open to public subscription for a period of one month. This loan and the method of selling it proved very popular, and before the close of the thirty days during which subscriptions were open to the public at large, \$75,496,550 of the bonds were sold, of which \$25,000,000 were reserved for resumption and the remainder applied to refunding purposes.

The agitation by Congress of such measures as a repeal of the resumption act, and the re-establishing in the currency of the country of the silver dollar, the issue of which had been discontinued by the coinage act of 1873, somewhat alarmed investors, and retarded the further sale of four per cent. bonds. The opponents of resumption, however, were not able to repeal the resumption act, and the advocates of remonetizing the silver dollar succeeded only in having the coin reissued in amounts of not less than \$2,000,000 nor more than \$4,000,000 per month on Government account, the profit in its coinage to accrue to the Government instead of to the holders of bullion. On the 16th of January, 1878, Secretary Sherman, having concluded all contracts for the sale of four per cents, gave notice that he would receive subscriptions from the public at large for the sale of these bonds, and efforts were again made to popularize them and to facilitate their sale. The purchasers were to be allowed a commission of one fourth of one per cent. on the amount purchased in

excess of \$1,000, and all national banks were invited to become depositories for the purpose of aiding in placing the loan.

The process of refunding continued during the calendar year 1878 with more or less success, and at the close of the year there had been sold of four per cents for this purpose \$173,085,450. The resumption act of January 14, 1875, provided for a return to specie payments on January 1, 1879. As resumption would remove the difference in value between the coin and paper currency of the country, the banks belonging to the Clearing-House Association of New York agreed with the Treasury Department that on and after that date they would take legal-tender notes in payment of all obligations of the Government. Under this arrangement payments for interest on the public debt and for bonds called in for redemption, which were theretofore made by the check of the United States Treasurer issued payable in New York, could be made after the 1st of January in legal-tender notes. The necessity for disbursing coin having thus been practically removed, there was no longer any need of requiring payments due the Government to be made in coin. So on the 1st of January, 1879, announcement was made that payments for bonds issued might thereafter be made in legal-tender notes; and a system of graded commissions was established, with a view of encouraging banks to make their subscriptions as large as possible. Under this new arrangement subscriptions came in very rapidly, and there was throughout the country unprecedented activity in the public stocks, which greatly advanced in market value from day to day. As many of the bonds called were held in Europe, the payment of them necessarily caused a drain of gold from the country, and this was beginning to cause a tight money market and embarrassment to the financial operations of the country. To avoid such embarrassment, Secretary Sherman on January 21, 1879, made a contract with certain prominent foreign bankers, by which \$5,000,000 a month of the four per cent. consols were to be taken in England, that amount being deemed sufficient to prevent the shipment of gold from this country to pay for called bonds. The plan resulted successfully.

Meanwhile Congress, by an act approved January 25, 1879, authorized the exchange of the four per cent. consols of 1907 for an equal amount of any outstanding uncalled six per cent. five-twenty bonds of the United States, the Department to pay the holders of the bonds exchanged the accrued interest and additional interest for a period of three months. Under this authority there were exchanged for five-twenty six per cent. bonds \$806,000. To further facilitate the refunding operations of the Government, Congress, by an act approved February 26, 1879, authorized the issue of refunding certificates in sums of \$10, bearing interest at the rate of 4 per cent. per annum, and

convertible at any time, with accrued interest, into the four per cent. bonds described in the refunding act—the money received to be applied only in the payment of bonds bearing interest at a rate not less than 5 per cent.

Apprehensions that there would be difficulty in settlements on the 1st of April, 1879, for the large amount of bonds which had been subscribed for in January, caused a temporary depreciation in the price of the bonds and certificates. It was believed, however, that this depreciation was but temporary, and that, when it was found that the settlements could be made without difficulty, the bonds and certificates would again appreciate in value. To secure to the Government the advantage of the appreciation, Secretary Sherman on March 4, 1879, gave notice that when the outstanding five-twenty six per cent. bonds of the United States should be covered by subscriptions to the four per cent. consols of 1907, the latter would be withdrawn from sale under the terms proposed in the Department's circular of January 1, 1879, and the terms stated in the contract of January 21, 1879.

As soon as the 1st of April passed, and without embarrassment in the settlement of balances, subscriptions poured in rapidly. On the 4th of that month one subscription was received for \$40,000,000. This was followed by a subscription of \$10,000,000, another of \$2,000,000, two more of \$25,000,000 each, and another of \$30,000,000, together with others of less amounts. Of these, \$59,565,700 were accepted, and \$60,919,800, which came too late, were rejected, and further sales ceased.

The policy of withdrawing further sales of the bonds under the offer of January 1st proved to be a wise one; and immediately after the suspension of sales of certificates and bonds on April 4th, as above stated, steps were taken with a view of again offering them at an advance upon their previous price. On April 16th there were offered to the public \$150,000,000 of the four per cents at a premium of one half of one per cent., and in addition thereto about \$45,000,000 of refunding certificates, the proceeds of the whole being sufficient to redeem the outstanding ten-forty bonds, which were all the bonds redeemable at that time. The four per cents were also offered in exchange for the ten-forties, as authorized by the act of January 25, 1879. Before the close of the day subscriptions under the new terms for \$2,000,000 of the bonds offered were received. The next day came one for \$10,000,000, followed by others of \$1,000,000, \$2,000,000, and \$4,000,000 respectively, and others for smaller amounts; and just before the close of business on that day, a subscription was received from one bank, representing a large number of private bankers in New York, for the entire amount of bonds offered and \$40,000,000 of the refunding certificates. Subscriptions were received and accepted for \$149,389,650, and received and declined for \$34,755,000. Exchanges were also

made to the amount of \$2,089,500. The subscription of \$40,000,000 for the refunding certificates was also declined, the evident intent of the law being that they should be distributed as far as practicable among the people. To bring the certificates within the reach of small investors, on and after April 18th their sale was restricted to Independent Treasury officers and public officers bonded for that purpose, and to sums not exceeding \$100 at one time. In response to the invitation to become depositaries for the sale of these certificates, 509 public officers and 76 national banks were designated for the purpose, and engaged in the sale.

The sale of the certificates was completed in June, 1879, and the proceeds were applied to the redemption of the ten-forty bonds. The certificates were sold as follows:

By public officers designated as depositaries.....	\$28,569,200
By national banks.....	1,197,670
By Independent Treasury officers.....	10,245,890
In all.....	\$40,012,760

Thus was accomplished the refunding of all the bonds which were then redeemable, without the loss of a dollar, and to the great advantage of the country.

The entire amount of four and a half per cent. bonds issued by Secretary Sherman for refunding purposes has been \$135,000,000; of four per cent. bonds and refunding certificates, \$710,345,950; making a total of \$845,345,950; for which were redeemed of six per cent. bonds \$651,195,700, and of five per cent. bonds \$194,150,250, resulting in an annual saving in the interest charge of \$14,290,416.50.

The following table shows all the transactions under the refunding acts since 1870, with the amount of annual interest charge saved thereon:

TITLE OF LOAN.	Rate per cent.	Amount refunded.	Annual interest charge.
Loan of 1858	5	\$14,217,000	} \$10,405,862 50
Ten-forties of 1864 ...	5	193,890,250	
Five-twenties of 1862.	6	401,143,750	
Five-twenties of Mar., 1864	6	1,327,100	
Five-twenties of June, 1864	6	59,185,450	
Five-twenties of 1865.	6	160,144,500	
Consols of 1863.....	6	211,337,050	
Consols of 1867.....	6	316,423,500	
Consols of 1863.....	6	87,677,050	
Total.....	..	\$1,395,345,950	

In place of the above bonds there have been issued bonds bearing interest as follows:

TITLE OF LOAN.	Rate per cent.	Amount issued.	Annual interest charge.
Funded loan of 1881.....	5	\$500,000,000	\$25,000,000
Funded loan of 1891.....	4½	185,000,000	8,325,000
Funded loan of 1907, including refunding certificates.....	4	710,345,950	28,419,889
Total.....	..	\$1,395,345,950	\$61,738,889

It thus appears that the annual saving hereafter in the interest charge by means of the refunding operations will be \$19,000,846.50.

J. K. URTON,

Assistant Secretary of the Treasury.

RESUMPTION OF SPECIE PAYMENTS.

The resumption of specie payments by the Government took place on January 1, 1879, as provided by law.

No precise date can be fixed when the suspension of specie payments thus resumed occurred, the suspension not having been authorized or sanctioned by law. The banks in the city of New York suspended coin payments on the 30th of December, 1861. Their example was necessarily followed by most of the banks throughout the country, and the Government soon yielded to the same necessity in respect to the United States notes then outstanding and matured. Gold commanded a nominal premium throughout the year 1861, but the first recorded quotation of it was at 103 on January 13, 1862. Of the \$50,000,000 of notes which had been authorized by the acts of July 17 and August 5, 1861, there were outstanding at the time of the suspension \$33,460,000. After the suspension, on February 12, 1862, an additional emission of \$10,000,000 was authorized, making in all \$60,000,000. These notes bore no interest, were payable on demand, and receivable in payment of public dues, and could be reissued. They were not intended, however, for general circulation as money, but the practical demonetization of coin as a circulating medium left only the depreciated issues of the banks to supply the entire circulation of the country; and these proving insufficient to meet the extraordinary demands for circulation consequent upon the war, the Treasury notes were drafted into the service as substitutes for the coin which had fled the country.

The balance in the Treasury on December 30, 1860, subject to the warrant of the Secretary, was \$2,078,257. During the calendar year 1861 the net receipts of the Treasury from all sources were \$218,224,077.64 as against \$59,217,030.19 for the previous year; but the expenditures had increased in a still greater ratio, and in January, 1862, the Treasury was unable to answer the requisitions upon it for disbursements. Additional resources to carry on the Government became imperative, but no coin was left in the country for which to sell a loan. Of the depreciated bank currency there was believed to be then in existence only about \$150,000,000, and this with the \$60,000,000 of Treasury notes made the entire circulation of the country only \$210,000,000; and to collect these notes together for public disbursement, scattered as they were throughout the country, would be almost as hopeless a task as to issue a loan for coin and bring back to the country the metallic currency which had gone abroad to pay foreign indebtedness. To meet this emergency, and with a view of utilizing all the re-

sources of the country, Congress, by act approved February 25, 1862, authorized the issue of \$150,000,000 of notes not bearing interest, payable at the Treasury of the United States, and of such denominations as the Secretary of the Treasury might deem expedient, not less than five dollars each. Of this amount \$60,000,000 were for the redemption of the notes of July 17 and August 5, 1861. The authorizing act further provided as follows:

That the amount of the two kinds of notes together shall at no time exceed the sum of one hundred and fifty millions of dollars, and such notes herein authorized shall be receivable in payment of all taxes, internal duties, excises, debts, and demands of every kind due to the United States, except duties on imports, and of all claims and demands against the United States of every kind whatsoever, except for interest upon bonds and notes, which shall be paid in coin, and shall also be lawful money and a legal tender in payment of all debts public and private, within the United States, except duties on imports and interest as aforesaid. And any holders of said United States notes depositing any sum not less than fifty dollars, or some multiple of fifty dollars, with the Treasurer of the United States, or either of the Assistant Treasurers, shall receive in exchange therefor duplicate certificates of deposit, one of which may be transmitted to the Secretary of the Treasury, who shall thereupon issue to the holder an equal amount of bonds of the United States, coupon or registered, as may by said holder be desired, bearing interest at the rate of six per centum per annum, payable semi-annually, and redeemable at the pleasure of the United States after five years, and payable twenty years from the date thereof. And such United States notes shall be received the same as coin, at their par value, in payment for any loans that may be hereafter sold or negotiated by the Secretary of the Treasury, and may be reissued from time to time as the exigencies of the public interest shall require.

Later in the same session, by act approved March 17, 1862, Congress declared the outstanding notes of July 17 and February 12, 1862, to be a legal tender in like manner, for the same purposes and to the same extent, as the notes authorized by the act of February 25, 1862. Still later, by act of July 11, 1862, Congress authorized an additional issue of \$150,000,000 of notes of similar character, and, like those already issued, exchangeable for bonds; and also provided that the Secretary might receive and cancel any notes heretofore issued, and in lieu thereof issue an equal amount of notes authorized by this act. The act also provided that not less than \$50,000,000 of these notes should be reserved for the payment of certain deposits, to be used only when, in the judgment of the Secretary of the Treasury, the same or any part thereof might be needed for that purpose. By act of July 17th following Congress authorized the issue of postage and revenue stamps for use as fractional currency, preferring this expedient to metallic coins or tokens reduced in value below the existing standard, making them receivable in payment of all dues to the United States under five dollars, and exchangeable for United States notes when presented in sums of not less than five dollars.

Under these several acts a total circulation of \$250,000,000 could be issued, and in an improbable contingency \$50,000,000 more; also

a supply of fractional currency. These issues, together with the issues of bonds, relieved the Treasury from its embarrassment, and on the 1st of July, 1862, not a requisition upon the Treasury from any department remained unhonored. The military reverses of June, July, and August of that year, however, injuriously affected the financial condition of the country, and Congress, by act of March 3, 1863, authorized, among other measures, an additional issue of \$150,000,000 of notes having substantially the same qualities and restrictions as those theretofore issued, and provided that in lieu of any other United States notes returned to the Treasury and destroyed there might be issued an equal amount of notes authorized by this act. It also provided that holders of United States notes, issued under and by virtue of the several acts heretofore cited, must present them for the purpose of exchanging them for bonds on or before the 1st day of July, 1863, and that thereafter the right to thus exchange them should cease and determine. The same act also provided that in lieu of the postage and revenue stamps authorized for use as fractional currency, commonly called postal currency, there might be issued fractional notes of like amounts and in such form as might be deemed expedient; the whole amount of fractional currency issued, including postage and revenue stamps, not to exceed \$50,000,000. Under these several acts there could be issued of legal-tender notes \$450,000,000, and of fractional currency \$50,000,000. No additional issue of notes was thereafter authorized.

The issue of Treasury notes by the Government was no new departure, but the notes issued under the several acts above stated bore certain qualities not given to any issued prior to 1861. They were declared by law to be lawful money and a legal tender for all debts, public and private, except for duties on imports and interest on the public debt, and they were convertible into interest-bearing bonds. Their convertible property, however, ceased to exist on the first of July, 1863, and since that date the Government has had for the first time in its history a national currency of its own notes—notes not convertible into other obligations and not redeemable at any specified time or place. These notes were both a loan to the Government and a national currency. The only justification attempted for their issue was that it was a war measure, one of necessity, not choice; and the notes were not expected to survive the exigencies which caused their issue. It proved, however, a most important measure. For, right or wrong, the employment of these notes as a legal-tender currency has exerted a most powerful and decisive influence over the property and material interests of every individual in the United States, and has become a tremendous factor in every problem, political, social, or economical.

The notes were first issued April 1, 1862, and their issue gradually increased in amount un-

til January 30, 1864, on which day there were outstanding \$449,338,902, the highest point reached. By act approved June 30, 1864, Congress directed that the total amount of United States notes issued or to be issued should never exceed \$400,000,000, and such additional sum, not exceeding \$50,000,000, as might be temporarily required for the redemption of temporary loans. Despite this restriction as to the amount of the notes which could be issued, and the extraordinary properties with which they were endowed, their value depreciated until on July 11, 1864, they were worth but 35 cents on a dollar, and their value fluctuated from day to day, unsettling prices of commodities, stimulating speculation, and creating distrust and apprehension in all business circles. A retirement of the amount in excess of four hundred millions was gradually made, in conformity with the law and a generally approved policy of retiring the notes as rapidly as practicable.

Secretary McCulloch, in his annual report for 1865, expressed his opinion that the legal-tender acts were war measures passed in a great emergency; that they should be regarded only as temporary; that they ought not to remain in force a day longer than was necessary to enable the people to prepare for a return to the gold standard; and that the work of retiring the notes which had been issued should be commenced without delay, and carefully and persistently continued until all were retired. The House of Representatives on December 18, 1865, under a suspension of the rules by a vote of 144 yeas to 6 nays, resolved, "That this House cordially concurs in the views of the Secretary in relation to the necessity of a contraction of the currency, with a view to as early a resumption of specie payments as the business interests of the country will permit; and we hereby pledge coöperative action to this end as speedily as possible." To carry out this policy, Congress, by an act approved April 12, 1866, directed that, of United States notes outstanding, not more than ten millions might be retired and canceled within six months from the passage of this act, and thereafter not more than four millions in any one month. Under the authority of that act notes were retired until the amount outstanding December 31, 1867, had been reduced to \$356,000,000; but a stringent money market, a decline in values, and the remonstrances of business men somewhat alarmed the country, and no further withdrawals were made. On February 4, 1868, the authority to reduce the volume of legal-tender notes below \$356,000,000 was suspended by Congress, leaving that amount of notes outstanding.

There was, however, a general feeling throughout the country that specie resumption should be kept in view, and on March 18, 1869, an act of Congress "to strengthen the public credit" was approved. In this act the faith of the United States was solemnly pledged to make provision at the earliest practicable

period for the redemption of the notes in coin. Some doubt arose thereafter as to whether the notes which had been retired and canceled under the act of April 12, 1866, could be reissued up to the limit in the aggregate of four hundred millions. Secretary Boutwell, believing that such authority existed, reissued of them in 1872 \$4,637,256, but afterward retired \$3,481,541. In the autumn of 1873, however, owing to the monetary panic, there was much distress in business and a great demand for money. To relieve the stringency of the money market, and to prevent if possible any further commercial disasters, Secretary Richardson reissued of the notes retired \$24,844,255, making the amount outstanding \$382,979,815, of which he subsequently retired \$979,815, leaving outstanding \$382,000,000; and Congress, by an act approved June 20, 1874, established that amount as the maximum limit to which the notes could be issued.

No further change was made in the amount of outstanding notes, nor any further legislation had in regard to them, until January 14, 1875, on which date was approved the following act:

AN ACT TO PROVIDE FOR THE RESUMPTION OF SPECIE PAYMENTS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and required, as rapidly as practicable, to cause to be coined, at the mints of the United States, silver coins of the denominations of ten, twenty-five, and fifty cents, of standard value, and to issue them in redemption of an equal number and amount of fractional currency of similar denominations, or, at his discretion, he may issue such silver coins through the mints, the sub-treasuries, public depositories, and post-offices of the United States; and, upon such issue, he is hereby authorized and required to redeem an equal amount of such fractional currency, until the whole amount of such fractional currency outstanding shall be redeemed.

SEC. 2. That so much of section three thousand five hundred and twenty-four of the Revised Statutes of the United States as provides for a charge of one fifth of one per centum for converting standard gold bullion into coin is hereby repealed; and hereafter no charge shall be made for that service.

SEC. 3. That section five thousand one hundred and seventy-seven of the Revised Statutes, limiting the aggregate amount of circulating notes of national banking associations, be, and is hereby, repealed; and each existing banking association may increase its circulating notes in accordance with existing law without respect to said aggregate limit; and new banking associations may be organized in accordance with existing law without respect to said aggregate limit; and the provisions of law for the withdrawal and redistribution of national-bank currency among the several States and Territories are hereby repealed. And whenever, and so often, as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of the Secretary of the Treasury to redeem the legal-tender United States notes in excess only of three hundred millions of dollars, to the amount of eighty per centum of the sum of national-bank notes so issued to any such banking association as aforesaid, and to continue such redemption as such circulating notes are issued until there shall be outstanding the sum of three hundred million dollars of such legal-tender United States notes, and no more.

And on and after the first day of January, anno Domini eighteen hundred and seventy-nine, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding, on their presentation for redemption at the office of the Assistant Treasurer of the United States in the city of New York, in sums of not less than fifty dollars. And to enable the Secretary of the Treasury to prepare and provide for the redemption in this act authorized or required, he is authorized to use any surplus revenues from time to time in the Treasury not otherwise appropriated, and to issue, sell, and dispose of, at not less than par in coin, either of the descriptions of bonds of the United States described in the act of Congress approved July fourteenth, eighteen hundred and seventy, entitled "An act to authorize the refunding of the national debt," with like qualities, privileges, and exemptions, to the extent necessary to carry this act into full effect, and to use the proceeds thereof for the purposes aforesaid. And all provisions of law inconsistent with the provisions of this act are hereby repealed.

It will be seen that the above act provided—first, for the manufacture and issue of subsidiary silver coins in redemption of the outstanding fractional paper notes; second, for an unlimited issue of national-bank notes, with a provision for the retirement of legal-tender notes to the extent of 80 per cent. of such issue, until the amount of legal-tender notes outstanding should be reduced to three hundred millions; and, third, for the redemption in coin of the legal-tender notes, on presentation in sums of fifty dollars and upward at the Sub-Treasury in New York on and after January 1, 1879. To carry out the purposes of this act, ample authority was given the Secretary of the Treasury to apply all surplus revenues of the Government, and also to issue at par in coin an unlimited amount of bonds of the description authorized by the refunding act.

At the time of the passage of this act there were in the Treasury about two million ounces of fine silver bullion. The fractional notes had been gradually approaching par in coin, while the gold price of silver had been gradually falling, and no doubt was entertained as to the possibility of putting and keeping the silver in circulation unless its relative value increased. In this connection the following quotation from the report of the Superintendent of the Mint for 1875 is of interest:

The depreciation of United States legal-tender notes, which commenced soon after their issue took place, caused the silver coins to be exported, and rendered the employment of a substitute necessary. The issue of fractional notes was undoubtedly preferable to the debasement of the silver coins, but their permanent use is neither desirable nor practicable. The annual issue, being about \$36,000,000 on a circulation of from \$40,000,000 to \$45,000,000, shows the average life of these notes to be, say, fifteen months. The estimates of the Treasury officers having charge of the business show the necessary expense of maintaining this currency, during the last fiscal year, to have been \$1,410,745. This does not include the expense attending the handling of the fractional notes at the different sub-treasuries and depositories, all of which receive them for redemption, and which, if added to the expenses incurred at the Department, would probably show the total cost of maintaining the fractional currency to be equal to about 5 per cent. on the annual issue, and corresponding with the interest on the amount of bonds which may have to be sold to procure, say, \$36,000,-

000 (gold value) in silver bullion for coinage, and which would give silver coins of the nominal value of \$45,000,000.

Notwithstanding the expense incurred, and the care which has been exercised by the Government, to renovate and keep the fractional currency in good condition, it is well known that a large percentage of the notes in circulation, particularly in localities not convenient to banks, are deteriorated to an extent rendering them quite unfit for use. It has also been counterfeited to a much greater extent than coin, and the detection of the spurious notes is infinitely more difficult than of counterfeit coins. The loss to the public from this source must ultimately be very considerable. The "wastage," as the small percentage of these notes worn out or destroyed while in circulation may be properly termed, falls mostly upon a class of people the least able to bear it. It is no satisfaction to a man who suffers the loss of a tenth of his day's wages by receiving a 25-cent note which no one will accept from him in payment, to be told that it reduces to that extent the expenses of the issue of such money by the Government of the United States.

The expense of manufacturing the subsidiary silver coins is estimated by the mint officers at from 1½ to 2 per cent., the rate being less when the mints are worked to their maximum capacity. The total expense attending the manufacture of the coinage of the last fiscal year (\$43,854,708) was \$889,370, or about 50 per cent. of the expense of maintaining the fractional currency. In this estimate the seigniorage realized on the silver and minor coinage (\$436,105.81) has not been considered as reducing the cost of coinage, the same being regarded as a gain to the Government, and not an earning by the mints.

The rule of the principal countries is to redeem in kind the subsidiary silver coins when worn to an extent rendering the inscriptions illegible. A long period, probably fifty years, would elapse before any considerable portion of a new issue of silver coins would diminish in weight by abrasion to an extent sufficient to require their withdrawal. The advantage in this respect of silver coins over paper fractional currency is so great as not to admit of comparison. Moreover, their bullion-value, when presented for exchange for new pieces, would of course be the same, or nearly so, as when issued, less the loss by wear. The seigniorage or gain to the Treasury on the subsidiary silver coins will be from 10 to 12 per cent., and more than sufficient to defray the necessary expenses of coining, distribution, and maintenance in good condition.

The purchase of bullion and the manufacture of subsidiary coins were commenced as soon as practicable, and were continued until February 28, 1878, at which time there had been purchased 31,603,905.87 fine ounces of silver bullion, for which there had been paid the sum of \$37,571,148.04 in gold coin—an average of 118.881 cents per ounce. There were coined of these fractional coins \$42,974,931. Had the entire amount of fine silver purchased been coined, there would have resulted therefrom \$43,689,519. Although the resumption act appeared to give ample authority for the manufacture and issue of these coins in redemption of the fractional notes, the Treasury hesitated about using the power, the value of the notes and the coins to be issued being so nearly equal as to create apprehensions that the latter might be exported, and leave the country without fractional money of any kind; but Congress, by the act of April 17, 1876, directed the Secretary of the Treasury to issue the coins, and on the following day a circular was published

in accordance therewith. Silver, however, continued to depreciate, while the notes continued to appreciate, and consequently none of the apprehensions were realized. The notes were rapidly presented for redemption, compelling the Government to run its mints over business hours, and to use every exertion to supply the demand for the new coins.

There still remaining an apparent scarcity of fractional coin, Congress, by a joint resolution approved July 22, 1876, authorized the Secretary of the Treasury to issue subsidiary coin to an amount not exceeding ten million dollars, in exchange for an equal amount of legal-tender notes, such notes to be kept apart as a special fund, and to be reissued only upon the retirement and destruction of a like sum of fractional currency received at the Treasury in payment of dues to the United States, the fractional currency so destroyed to be counted as part of the sinking fund. The amount of fractional notes retired under this act up to January 1, 1880, was \$25,834,429.37, and the amount still outstanding on that day was \$15,674,803.78. The balance of the note-reserve fund for the redemption of fractional currency was, however, by the act approved June 21, 1879, directed to be reissued in payment of arrears of pensions, leaving the future redemptions of such fractional notes to be made from the current funds in the Treasury. To reimburse the Treasury for the depletion in its cash consequent upon the redemption of these notes, there was issued of five per cent. bonds of the description authorized by the refunding acts (funded loan of 1881) \$17,494,150, and the surplus revenues of the Government supplied the balance.

Soon after the issue of these silver coins commenced, it became apparent that old issues of a like character were returning to the country and coming into circulation. The amount of coins thus returning continued to increase, and, as there was no authority for their redemption or exchange by the Government, the volume of subsidiary coins became so large as to cause inconvenience to the general business of the country. To correct this evil, Congress, by an act approved June 9, 1879, provided for the exchange of subsidiary coins for lawful money of the United States at all Sub-Treasury offices; and under the operations of this act these coins came in so rapidly that on January 1, 1880, the Government held of them \$18,881,629.15.

Under the clause of the resumption act of January 14, 1875, authorizing the redemption of legal-tender notes in the amount of 80 per cent. of national-bank notes thereafter issued, the Treasury began to redeem notes in March, 1875, and continued to do so until May 31, 1878, on which date an act was approved forbidding their further redemption. There was thus redeemed of these notes an amount of \$35,318,984, leaving outstanding to be redeemed in coin under other provisions of the

resumption act \$346,681,016. The cash in the Treasury was of course lessened in the amount of this redemption, and the loss was made up by the surplus revenues, which would otherwise have been applicable to the redemption of some other kind of indebtedness.

Toward the redemption of the notes in coin on the 1st of January, 1879, as further provided in the resumption act, no steps were taken before the administration of President Hayes, commencing March 4, 1877. On April 6, 1877, Secretary Sherman addressed a letter to a prominent banking firm, in which he announced his purpose to sell bonds to secure coin with which to meet the redemptions required, provided the surplus revenues proved insufficient to enable him to redeem the notes as required by law. He also announced that whenever the sales of $4\frac{1}{2}$ per cent. bonds (funded loan of 1891) then being made for refunding purposes reached two hundred millions, he proposed to withdraw from the market the remaining one hundred millions authorized to be issued for refunding purposes, and to issue thereafter only four per cents (funded loan of 1907). Before the 1st of July ensuing the limit of two hundred millions was reached, and of the amount sold fifteen millions were applied to resumption purposes. On the 9th of June a contract was made by the Secretary for the sale of said 4 per cent. bonds, under which also twenty-five millions were reserved for resumption purposes.

This amount of forty millions was received in gold coin before October, 1877. In that month Congress convened in special session. Among its first measures was the introduction on one day of thirteen bills for the repeal of the resumption act. One of these bills passed the House on the 23d of the following month. This extraordinary change of sentiment had been brought about by various causes. The depression in business, which had existed since 1873, was attributed by many to the effects of the resumption act. A continually increasing value of the dollar in use rendered it more difficult for debtors to meet their obligations, and the passage of this bill in the House reflected with considerable truthfulness the feeling throughout the country. The bill was amended by the Senate, but in its amended form failed to receive the concurrence of the House. In this session was also agitated the policy of restoring to the currency of the country the old silver dollar of 412½ grains, the coinage of which was discontinued under the coinage act of 1873. The price of silver had so depreciated that, as compared with gold, a dollar of this kind was worth only about 85 cents; and if authority had been given for its unlimited coinage upon the deposit of bullion at the mints by private parties, as in the case of gold, the parties depositing it would, for a while at least, have profited to the extent of about 15 per cent. in the transaction. To prevent this advantage accruing to the holders

of silver bullion, and at the same time to restore the old silver dollar to its place in the currency of the country, Congress passed an act, which was approved February 28, 1878, directing the dollar to be coined at the rate of not less than two million dollars nor more than four million dollars per month, the bullion for such coinage to be purchased by the Treasury at current market rates, and the profit arising in the coinage to be retained by the Government. The act further provided that any holder of this coin might deposit it with the Treasurer in sums of not less than ten dollars, and receive therefor certificates corresponding to the denominations of United States notes, the coin representing such certificates to be retained in the Treasury for their payment on demand, and the certificates to be received for customs, taxes, and all public dues, and when so received to be reissued.

During the winter of 1877-'78 no further action was taken by the executive officers of the Government concerning resumption. On April 1, 1878, in an interview with the House Committee on Banking and Currency, Secretary Sherman announced his purpose to increase the coin reserve by the sale of bonds to the amount of fifty millions. With this additional amount the total coin reserve in the Treasury applicable to resumption would be about forty per centum of the amount of legal-tender notes outstanding; and with this reserve the Secretary thought it would be practicable and prudent to commence the redemption of the notes on the appointed day as required by law. Four days later negotiations were begun in New York between the Treasury Department and the banks for the sale of $4\frac{1}{2}$ per cent. bonds (funded loan of 1891) for this purpose; and after a little delay a sale was effected to the amount of \$50,000,000 at a premium of $1\frac{1}{2}$ per cent. The ability of the contracting parties to place the coin in the Treasury as proposed could not be doubted, and from that date there was but little fear of the success of resumption. Further efforts to repeal the law were abandoned, and the business of the country began to adjust itself to the basis of the approaching resumption of specie payments. The payments for the fifty millions of bonds were promptly met, and in addition thereto the Treasury reserved of the proceeds of sales of 4 per cent. bonds (funded loan of 1907), then being made, an additional amount of \$5,500,000 in gold coin necessary for the extraordinary payment of that amount on account of the so-called "Halifax award."

In addition to providing the necessary coin reserve, every step was taken by the Treasury which the law would permit to maintain the reserve intact. On the 1st of January, 1879, about twenty-five millions of interest on the public debt, payable in coin, was to fall due; and, as the law required the redemption-reserve fund to be kept in New York, Secretary Sherman determined that the payment

of coin on account of interest should thereafter be made only in that city, but gave permission to other Sub-Treasury officers to pay interest to all persons who might be willing to accept legal-tender notes. Arrangements were also made with the several assay offices by which gold could be purchased for legal-tender notes, whereby the Treasury was replenished to that extent for the probable coin payments in redemption of notes. Steps were also taken by which the Government, to a certain extent and for certain purposes, became a member of the Clearing-House Association of New York. Under this arrangement, in consideration of the Government's receiving and collecting its checks through the Clearing-House, that body agreed to receive all balances due it upon such checks at the counter of the Sub-Treasury in that city, and to accept legal-tender notes in payment of Government checks and drafts of all descriptions. As all interest-checks as well as checks issued in payment of called bonds were by law payable in coin, this agreement on the part of the Clearing-House, through which institution nearly all of the checks passed, relieved the Treasury almost entirely from the necessity of making actual coin payments after resumption took place. This necessity being removed, there was no longer any reason for requiring duties on imports to be paid in coin as provided by law; and the Secretary of the Treasury, in his annual report of December 2, 1878, announced to Congress his purpose to receive notes in payment of such duties. Congress adjourned for the holidays without expressing any opinion as to the legality or advisability of the action proposed, whereupon instructions were given to the Government officers to receive such notes in payment of duties, the notes to be redeemed in coin at New York on Government account whenever it became necessary. Instructions were also given to the Treasurer and other officers of the Department to close up in their accounts all distinctions between coin and currency, and after January 1, 1879, to recognize, in the accounts as well as in the money, that the Government had resumed specie payments, and that the several kinds of money in circulation were of equal value.

The preparations were so complete that on January 1, 1879, the date when resumption took effect, the Treasurer held of gold coin and bullion \$135,382,639.42; of standard silver dollars coined under the act of February 28, 1878, \$16,704,829; and of fractional silver coin, including silver bullion, \$15,471,265.27. The amount of coin held by the Treasury as available for resumption purposes on that day, after deducting all matured coin liabilities, was about \$135,000,000, or about 40 per cent. of the amount of notes to be redeemed. The thoroughness of preparation for resumption had quieted all apprehensions as to the success of the policy, and on the first day of resump-

tion only straggling demands for coin were made, the amount aggregating less than the amount of notes preferred by the holders of coin obligations. And during the entire year there were redeemed of the legal-tender notes only the amount of \$11,456,536; while for the same period there were paid out of such notes on account of coin obligations more than \$250,000,000. There were also received of such notes in payment of customs-dues in the year ending December 31, 1879, \$109,467,456.

Thus, after much labor and sacrifice, the country was lifted out of the financial bog of depreciated paper currency, and with the resumption thus happily secured came a revival of business, an extraordinary demand for labor of all kinds, and a confirmation of that confidence which was so necessary for all business enterprises, and which had grown step by step with every movement made toward a specie basis.

The following table shows the market price, in coin, of \$100 of the legal-tender notes of the United States for January and July of each year from 1862 to 1879 inclusive—mean of highest and lowest in each month specified:

YEARS.	MONTH.		YEARS.	MONTH.	
	January.	July.		January.	July.
1862.....	97·6	85·6	1871.....	90·3	89·0
1863.....	68·9	76·6	1872.....	91·7	87·5
1864.....	64·3	33·7	1873.....	83·7	86·4
1865.....	46·3	70·4	1874.....	89·7	91·0
1866.....	71·4	66·0	1875.....	83·9	87·2
1867.....	74·3	71·7	1876.....	88·6	89·4
1868.....	72·2	70·1	1877.....	94·0	94·9
1869.....	73·7	73·5	1878.....	97·9	99·5
1870.....	82·4	85·6	1879.....	100·0	100·0

During the year 1879 coin flowed into the Treasury, while but little demand was made for its payment therefrom; so little, indeed, that the Treasury became drained of its notes, and in December it was obliged to require its creditors to receive in part payment of their dues 20 per cent. in coin—one half in gold coin, the other half in the new silver dollars.

Though resumption has been thus far firmly maintained, and there appears to be ample power, as far as human foresight can divine, to continue its maintenance, yet the question of continuing these notes in circulation, especially with their present legal-tender quality, is likely to be a vexed one in future politics.

A case involving the constitutionality of the legal-tender clause, as relating to contracts made prior to its adoption, was decided in the Supreme Court of the United States, December term, 1869, Chief Justice Chase presiding. The question presented for determination was whether the payee or assignee of a note made before the 25th of February, 1862, the date of the approval of the legal-tender act, should be obliged by law to accept in payment United States notes equal in nominal amount to the sum due according to its terms, when tendered by the maker or other party bound to pay it. The Court held that the defendant in error was

not bound to receive from the plaintiffs such currency tendered to him in payment of their note made before the passage of the act mentioned. When this decision was made, the Court consisted of eight Judges, there being one vacancy caused by the death of Associate Justice Wayne. The five concurring in the decision were Chief Justice Chase and Associate Justices Nelson, Clifford, Field, and Grier. Of these, the first three were understood to hold the legal-tender clause to be unconstitutional as to prior contracts only. Mr. Justice Miller dissented, and Justices Swayne and Davis concurred in his opinion. This decision was subsequently reversed, as below stated.

In the Supreme Court of the United States, December term, 1870, several cases came up similar in character, the controlling questions of which were: 1. Are the acts of Congress, known as the legal-tender acts, constitutional when applied to contracts made before their passage? 2. Are they valid as applicable to debts contracted since their enactment? The cases were considered by a full bench, and by a vote of five to four the Court held such acts of Congress constitutional as applied to contracts made either before or after the passage of the acts; thus overruling the previous decision in the matter. The opinion was rendered by Mr. Justice Strong, and concurred in by Justices Bradley, Miller, Davis, and Swayne. Chief Justice Chase delivered a dissenting opinion, as did also Justices Nelson, Clifford, and Field.

In this matter Secretary Sherman, in his annual report for 1879, submitted to Congress the following:

The Secretary is, therefore, of opinion that the provisions of existing law are ample to enable the Department to maintain resumption even upon the present volume of the United States notes. In view, however, of the large inflow of gold into the country and the high price of public securities, it would seem to be a favorable time to invest a portion of the sinking fund in United States notes, to be retired and canceled, and in this way gradually to reduce the maximum of such notes to the sum of \$300,000,000, the amount fixed by the resumption act.

The Secretary respectfully calls the attention of Congress to the question whether United States notes ought still to be a legal tender in the payment of debts. [The reader is referred to page 387 of this volume for the remainder of the Secretary's remarks on the legal tender of the notes.—*Ed.*]

J. K. UPRON,
Assistant Secretary of the Treasury.

RHODE ISLAND. The Legislature met at the usual time for the January session. An act defining the liability of towns and cities for property destroyed in times of riot was passed in the Senate, January 29th, providing that the owners of such property should be indemnified to the amount of three fourths of its value, and fixing six persons as the minimum number to constitute a mob. An act to rectify the boundary of the two Congressional districts of the State placed the whole of Providence in

the first district and the whole of Pawtucket in the second. By an act passed March 19th a bailor is enabled to release himself from his bond by producing his principal in court during the pendency of the action. A compulsory education bill was brought forward, and elicited considerable debate. It provided that every child between seven and fifteen years of age who should absent himself from school three times within three consecutive months without the consent of his parent, guardian, or teacher should be treated as an habitual truant, and every child who should not attend school for at least three months out of the twelve should be adjudged an absentee, the penalty in either case to be a fine of not more than ten dollars or detention in a reformatory institute of from six months to ten years; and that truant officers should be appointed in every town to enforce the law. A bill was passed prohibiting trap-fishing for two days in each week, between the 1st of May and the 1st of August. The three bills upon which most of the work and time of the January session were expended—a bill for the regulation of savings-banks, one reducing the State tax, and the compulsory education bill—all failed to pass. The General Assembly adjourned on the 11th of April.

The May session of the General Assembly began on the 26th and ended on the 30th of May. The savings-bank bill, postponed from the January session, was passed on the last day. It provides that the Supreme Court, upon application by petition in equity, may order the trustees of an institution under injunction, and unable to pay its depositors in full, to divide their assets into two classes, one class to be denominated the quick assets, and the other the reserved assets; that the Court may permit the institution to go on in business with the quick assets, and may order the deficiencies in the reserved assets to be apportioned among the depositors; that depositors shall give ninety days' notice of an intention to withdraw their funds; and that receivers shall receive not to exceed \$2,500 per annum for services in winding up a savings-bank, and not more than \$5,000 in all. The fees for jurors were raised from fifty cents to two dollars per diem by an act passed May 30th. Another act allows guardians or executors to whom letters have been granted by a court of probate to manage the estate of a ward or testator during the pendency of an appeal from the decree of the Probate Court to the Supreme Court.

The Prohibitory State Convention met at Providence February 25th. The existing State officers were renominated. The following resolutions were adopted by the Convention:

Resolved, That while we do not ignore other questions of principle and policy that pertain to the interests of the State of Rhode Island, we hereby express our firm belief that the questions of temperance, license, and the prohibition of the liquor-traffic outweigh them all in importance; and we reiterate our unalterable opposition to making that traffic respect-

able by legally licensing it, and again proclaim our entire confidence in the principle of the prohibition of the liquor-traffic by authority of law, as the best means of ridding our State of crime, pauperism, and an excessive taxation, and of promoting the virtue, prosperity, and happiness of all our citizens.

Resolved, That a prohibitory law, as well as every other criminal law, needs an efficient police force for its execution, and we therefore demand, in connection with the enactment of a law prohibiting the liquor traffic, an efficient force for its enforcement.

Whereas, The prohibition of the traffic in alcoholic liquors in the State of Maine, also in other parts of our land, and in other countries of the world, has proved a success; therefore,

Resolved, That it is the duty of all the members of our close temperance organizations, and of our open societies, to rally around the standard of prohibition, and unite their efforts and action to prohibit the traffic in ardent spirits.

Resolved, That this great success is a source of congratulation among ourselves, and of thanksgiving to Almighty God.

The Democratic State Convention was held in the State House in Providence, March 18th. The Hon. A. B. Lewis was elected Chairman. The following resolutions were adopted:

Resolved, That the Democratic party of the State of Rhode Island, in convention assembled, hails with joy the return of national legislation to the control of the Democratic party—the party which in the past has earned the well-merited reputation of being the party of the Constitution as bequeathed to us by the founders of the republic, and the party of the people; and that we deeply regret that the people of the United States are deprived, through the most unblushing fraud, bribery, and perjury that has ever disgraced the annals of our history, of having in charge of the executive branch of the country Samuel J. Tilden and Thomas A. Hendricks, who were on the 4th day of November, A. D. 1876, elected by an overwhelming majority to the offices of President and Vice-President of the United States; and further do we deplore that all of the persons who have been proved to have participated in this great wrong have been rewarded by being appointed to offices of great trust and honor at home or to represent the country in important positions abroad.

Resolved, That the Democratic party of this State, in regard to the internal affairs of the State, pledges itself and its members to a reform in the existing system of taxation in the State, and assures the citizens of the State that its influence will be exerted to establish such laws as will equally distribute the burdens of the State among all of its citizens, and to abolish all forms of double taxation; to such changes in the laws regulating institutions for savings as will restore them to the position of being institutions for the benefit of the laboring classes, from which they have in a large measure been diverted; and to so govern them as to restore such confidence in them as will again make them the favorite institutions of the frugal, in which they can be assured that their small savings will be faithfully, judiciously, and honestly administered and protected; to a change in the laws in regard to the registration of voters, so that all the citizens of this State may have a fair and equal opportunity to qualify themselves to vote at all elections, and for the enactment of a law which will not have the effect, as the present, of disqualifying nearly one half of the voters of this State who are not possessed of real estate; to a most thorough retrenchment in all expenditures by the State and towns, in order that the present burden in the form of taxation may be relieved from our now heavily laden industries; to the enactment of a law disqualifying any person from holding any office to which he may be elected by fraud, bribery, or intimidation, to which he may be a party; to such amendments of the Constitution of the State as will insure to

all citizens of this State the right of suffrage without discrimination on account of race, nativity, creed, color, or previous condition of servitude—and particularly to have such change made in behalf of those who fought in the Union army in the late civil war, so that it may some day be said that our State has recognized their services in as generous a manner as the General Government has condoned the offenses of those who bore arms against the Government by rewarding them with the right to participate in the government of the country which they helped to save.

The nominations were as follows: For Governor, Thomas W. Segar; for Lieutenant-Governor, Dr. J. M. Bailey; for Secretary of State, David S. Baker, Jr.; for Attorney-General, Charles H. Page; for General Treasurer, Patrick Farrell.

The Republican State Convention for the nomination of State officers was held in Providence, March 19th. The existing officers were renominated unanimously by acclamation. No resolutions were adopted.

The State election took place on the first day of April. The Republican ticket, supported also by the Prohibitive party, was carried by a majority of 3,826 for the Governor and 4,225 for the Lieutenant-Governor, electing the same officers who had held the offices the previous year: Charles C. Van Zandt, Governor; Albert C. Howard, Lieutenant-Governor; Joshua M. Addeman, Secretary of State; Willard Sayles, Attorney-General; and Samuel Clark, General Treasurer. There was a Greenback ticket also in the field, for which only a trifling vote was polled. The nominee for Governor was Samuel Hill; for Lieutenant-Governor, David A. McKay. The total vote was 15,610, or 4,099 less than in 1878. The falling off was 1,736 votes in the Republican party, 2,124 Democratic, and 334 Greenback votes.

In the Senate the election gave the Republicans 29 and the Democrats 8 members. The Republican Representatives elected numbered 54, the Democratic 18.

The Senatorial Committee of Congress empowered to investigate alleged violations of sections 1,754 and 1,755 of the Revised Statutes of the United States, regarding the preference to be given to discharged soldiers and sailors in appointments to offices in the United States civil service, met at Newport on August 15th. It was the standing Committee of the Senate on Civil Service and Retrenchment, and was composed of Senator M. C. Butler, chairman, and Senators Rollins of New Hampshire, Whyte of Maryland, and Beck of Kentucky. The committee was instructed to investigate this matter upon the occasion of a petition being presented to the Senate, signed by three hundred former soldiers and sailors, praying Congress to require the execution of the statutes above mentioned in the assignment of offices in the Providence Custom-House. This petition was accompanied by a memorial of Dr. J. B. Greene of Providence, alleging that several honorably discharged soldiers and sailors had recently been dismissed from that

Custom-House, and their places filled by civilians. The memorial and petition were presented to the Senate by Senator McDonald of Indiana on the 27th of May, and were the subject of a long and animated debate. Among the removals complained of were the displacement of General Shaw, the Collector, who was succeeded by Cyrus Harris, a relative of Senator Anthony, and the dismissal or enforced resignation of Majors Joyce and Bucklin, Mr. Frankland, and Captain Greene, a brother of the memorialist, who was replaced by Major Pomroy, a soldier who was wounded during the war of secession. On the strength of a couple of the new appointments the memorial stated that the dismissed soldiers had been succeeded mainly by relatives of the senior Senator for the State, Mr. Anthony. The committee listened to testimony from Dr. Greene, Major Pomroy, Major Joyce, and others. It had been alleged also that appointments were bestowed in the Custom-House and in the Post-Office as a reward for political services, and that Federal officers used their influence to affect the vote in the State elections, in violation of the rules for civil-service reform. The committee continued its sessions several days, taking down an extensive amount of evidence relating to the removals and appointments in the Custom-House, and also in the Providence Post-Office.

At the time when Senator McDonald presented Dr. Greene's memorial and the petition which it accompanied of the Rev. Augustus Woodbury and others, discharged soldiers and sailors, an investigation into the nature and effect of the property qualification for suffrage required by the Constitution of the State of Rhode Island was also demanded by the Senator. By these laws the franchise is withheld from foreign-born citizens of the United States who are not the possessors of a freehold of the minimum value of \$134, or who do not pay a rental of the amount of \$7 or over per annum, as well as from native American citizens who do not possess one of these qualifications and who do not pay a tax of at least \$1 a year. It was held that if the property qualification was not a violation of the fourteenth amendment of the United States Constitution, it would be necessary to reduce the representation of the State in the Lower House of Congress from two members to one, since the maximum vote polled in the State had not exceeded 24,000, and the total number of the voting population could not be much more. It was estimated that 10,000 or more citizens of foreign birth were excluded from the franchise by the above restrictions. This committee had also to inquire into the alleged employment of money in Rhode Island elections, and intimidation or undue influence exercised by managers of manufactories over their employees to control their votes.

These latter subjects were referred by the Senate to the select committee to inquire into alleged frauds in the late elections, of which Senator Wallace was chairman. At the same

time that the Butler Committee met in Newport the Wallace Committee held its sessions in the United States Court-House in Providence. From the testimony taken regarding the effects of the property qualification established by the Constitution of 1842, it appeared that several citizens of respectability were debarred from voting on account of being of foreign origin and possessing no real estate. The Hon. Thomas Davis, who had been a member of Congress, was disfranchised through losing his property by business reverses. A citizen, Colonel James Moran, who as an officer in the army had received and forwarded the ballots of the soldiers during the war, was excluded from voting by his foreign birth, while a negro whom he had brought with him was allowed as a native to vote. Several citizens whose property had been expropriated for public improvements were disfranchised during the two or three years which elapsed before the city paid the appraisal to them. It was stated that the failure of the amendment to remove the disqualification in 1871, when only 3,236 votes were cast for it and 6,960 against it, was due partly to an agitation against the Roman Catholics, who were supposed at the time to be striving to secure public moneys to support their schools. The amendment submitted to the people in 1876 to allow soldiers and sailors to vote was stated to have been overshadowed by the issue of the national election. The sentiment of the native population voting with the Republican party and of a part of the native Democrats, as elicited in the evidence, was strongly in favor of retaining the property qualifications; several naturalized voters also expressed the same views.

The receipts of the Treasury during the year ending December 31, 1879, were \$970,072, and the disbursements \$703,211; the balance in the Treasury amounted to \$164,635; the sum of \$102,225 was owing to the Rhode Island Hospital Trust Company. The bonded debt of the State amounted to \$2,534,500, or, with the deduction of the available sinking fund, to \$1,832,462. The total amount of the sinking fund was \$733,764, which was invested principally in securities of the city of Providence and of the United States Government.

The number of children in the State between five and fifteen years of age was 49,562. The number of children reported as attending the public schools was 32,793; as attending Catholic schools, 4,374; as attending private schools, 1,782; as not attending any school, 10,549. There were 41,810 pupils enrolled in the day-schools, and 30,001 attended school, the average attendance being 26,939. There were 819 schools altogether. The average school-year lasted nine months and two days. There were 883 teachers regularly employed, the male teachers drawing \$98,619 in salaries, and the female teachers \$309,780. In the evening schools, with an average duration of fourteen weeks, 2,677 pupils attended, the average at-

tendance being 1,796; the schools were 33 in number, employing 154 teachers. The public schools received an appropriation of \$92,923 from the State and \$340,237 from the towns, as well as \$83,034 for land and buildings, \$31,785 from district taxation, and \$52,227 from registry taxes and other sources; making a total revenue of \$600,208. The cost of instruction per capita of the pupils enrolled in the day-schools was \$11.02; of the average number of pupils attending, \$17.11. The number of schoolhouses was 446, and the estimated value of school property was \$2,654,148.

The appropriation of 1878 for the support of the State Farm, at Cranston, was \$28,814; for the State Prison, \$16,821. The appropriation made for the support of the State institutions in 1879 was \$71,350; the total payments from the Treasury for this purpose and for new works, \$91,988. During the year \$40,515 was collected for labor, sales of produce, etc., making the net cost of the institutions for the year \$51,463, of which \$43,000 represented the net cost of maintenance, which would give, assuming the average number of inmates to have been 800, a net cost to the State for each inmate per week of \$1.04. In the Asylum for the Insane the number of inmates had increased from 218 in 1878, and from 148 in 1873, to 283.

The new State Prison lately finished and occupied, upon the State Farm, is well built of stone quarried on the spot. The building is 453 feet long, 60 feet wide, and 45 feet high, with a dome over the chapel in the center whose top is 110 feet above the ground. The prison contains 252 cells of three sizes, the smallest of which are 5 feet by 8, and the largest 8 feet square.

For the year 1877 the number of births was 6,235, of marriages 2,282, of deaths 4,450; the first showing a slight decrease, the second an insignificant decrease, and the last a somewhat larger decrease. For the period of twenty-four years the total number of children born was 115,131, of which 4,429 were still-born; the total number of marriages recorded was 47,344, and of deaths 75,492. The proportion of children born of American parentage is slightly less than those of foreign parentage. The divorces granted during the year were 534, of which number 157 were for neglect, 155 for desertion, 68 for cruelty, 61 for drunkenness, and 52 for adultery. The deaths from consumption were 661, from diphtheria 492, the latter being an increase from 159 in 1876.

The Narragansett Indians held a meeting in Charlestown on July 30th to discuss the question of giving up their tribal constitution and acquiring the rights of citizenship. Little interest was shown by the Indians in the proposed change, and the decision was postponed. The question of abolishing the tribal authority of the Narragansett Indians was brought up in the Legislature, and is still pending.

In a suit for an injunction brought by cer-

tain tax-payers of the city of Newport to restrain the City Treasurer from paying the expenses of a banquet given by the City Council to officers from British naval ships, Chief Justice Durfee of the Supreme Court decided that the expenditure was unauthorized, and granted the injunction, refusing to entertain the plea that the suitors were estopped from applying for an injunction because their application was not made in advance.

ROEBUCK, JOHN ARTHUR, an English politician, was born December 29, 1802, and died November 30, 1879. He studied law in London, was called to the bar in 1831, and in the following year was elected to Parliament from Bath. He was soon known in the House as the "Objector-General," and, in the words of one of his biographers, "he faced every sort of fact in politics, analyzed all kinds of men, opposed and lectured Whigs and Tories, headed the rest of the Radicals in plain speaking; and, being still a young man, of no definite position and with no obvious aims, he created, inside and outside Parliament, a mingled feeling of detestation, wonder, admiration, and amusement." He was defeated in 1837 by Lord Powerscourt, but was reelected in 1841. It was during this Parliament—1841-'47—that Mr. Roebuck exhibited the most feverish activity of his life. In 1849 he was returned for Sheffield, and he sat for that constituency until 1868, when he was defeated, and was again returned in 1874. His most memorable appearance in public life was in January, 1855, when he brought forward in the House of Commons a motion for inquiry into the conduct of the Crimean war, which was resisted by the Government of Earl Aberdeen, but carried by a majority of 157, when that Government was forced to resign. In 1857 he made himself conspicuous by his opposition to a projected war with China, and his attitude upon this subject was influential in effecting a dissolution of that Parliament. His course on some important questions, notably his advocacy of the cause of the Confederate States, and his denunciations of trades-unions, led to his defeat in 1868. In 1877-'78 he vigorously supported the policy of the Earl of Beaconsfield, and he was sworn a Privy Councillor in 1878. Early in life he spent some years in Canada, and he was ever afterward one of the staunchest supporters of the rights of that colony against imperial pretensions. Besides numerous articles in the "Westminster" and the "Edinburgh Review," he wrote "Plan for Government of our English Colonies" (1849), and "History of the Whig Ministry of 1830" (1852).

ROMAN CATHOLIC CHURCH. The affairs of the Roman Catholic Church attracted less general interest in 1879 than has been usual in late years. On February 1st Pope Leo XIII. issued Letters Apostolic announcing a general jubilee. He also issued an Encyclical against the doctrines aimed by the Socialists, Communists, and Nihilists at all human authority and

all rights of property, urging the bishops and clergy to labor to instill into the young respect for parental and state authority. The Encyclical, by order of the Czar, was read in all the Catholic churches in Russia. The reception of a large deputation of Catholic journalists on February 22d was a recognition of the power of the press.

Some of the Oriental churches had been rent by schisms, and on February 28th he addressed an allocution to the Cardinals on the extinction of the schism among the Chaldeans, and his confirmation of the election of a new Patriarch of Babylon belonging to that rite. Soon after (March 10th) Kupelian, the schismatic Patriarch of Constantinople of his renunciation of all claims, and his submission to the Patriarch Hassoun, to whom the Porte restored the church property, an act which the Pope acknowledged in a letter to the Sultan. Kupelian proceeded to Rome and made his submission to the Pope also. His course was imitated by the Bishop of Zaka, and the Chaldean schism ended. On March 24th, by authority of Pope Leo XIII., the ancient order of the Knights of St. John of Jerusalem proceeded to the election of a Grand Master, a position which had been vacant during the century.

The condition of affairs in Rome, the capital of the Christian world, where every insult to the Catholic religion was encouraged and abetted, induced Leo XIII. to address Cardinal la Valletta, Cardinal Vicar of Rome, March 25th, and establish a commission of prelates and members of the Roman Patriariate to direct and supervise all elementary Catholic schools in Rome.

On May 12th the Pope made his first creation of Cardinals, admitting to the Sacred College Julian Florian Deprez, Archbishop of Toulouse; Louis Francis Desiderius Edward Pie, Bishop of Poitiers; Cajetan Alimonda, Bishop of Albenga; Frederiek, Landgrave of Fürstenberg, Archbishop of Olmütz; Louis Haynald, Archbishop of Kolocz; Joseph Pecci and John Henry Newman, priests of the Oratory; Americus Ferreira dos Santos Silva, Bishop of Porto; Joseph Hergenrother, a German theologian; and Thomas Zigliara, priest of the order of St. Dominic.

On June 1st he addressed a letter to the archbishops and bishops of the provinces of Turin, Vercelli, and Genoa on the Italian law of civil marriage, which made the conferring of a sacrament a crime, and those who conferred and who received it subject to punishment.

On August 4th he issued an Encyclical Letter on the restoration of Christian philosophy in Catholic schools according to the spirit of the Angelic Doctor St. Thomas Aquinas, in which, after reviewing the whole history of philosophical teaching, he concludes: "We exhort you, Venerable Brethren, most urgently to restore in full vigor and to propagate as far as possible the priceless wisdom of St. Thomas, for the

defense and ornament of the Catholic faith, for the welfare of society, and for the advancement of all sciences. We say 'the wisdom of St. Thomas.' Let teachers, designated by enlightened choice, devote themselves to instilling into the minds of their disciples the teaching of St. Thomas Aquinas, and let them be careful to demonstrate how far it surpasses all others in solidity and excellence. Let the academies you have instituted, or that you shall institute in future, explain and defend this doctrine, and use it in refuting prevailing errors." This Encyclical met a cordial response from bishops in all parts of the world, and caused a general tendency to lay aside all philosophical textbooks which had abandoned the exact system of St. Thomas. Leo XIII. also encouraged the publication of a new and careful edition of the complete works of St. Thomas Aquinas, and, to promote more severe and accurate studies, presided at several disputations on philosophical topics.

On September 19th, in a second promotion of Cardinals, Pope Leo XIII. elevated to that rank Monsignore Peter F. Meglia, James Cattani, Louis Jacobini, and Dominic Sanguigni, the Nuncios at Paris, Madrid, Vienna, and Lisbon.

The twenty-fifth anniversary of the definition of the Immaculate Conception was celebrated with pomp, and the Pope issued an Encyclical on the occasion.

In France a bill introduced into the Chambers by Jules Ferry, entitled "A project of law relating to the freedom of higher education," aimed in its seventh article at the suppression of all schools and academies directed by religious. The Catholic bishops from all parts, beginning with Cardinal Guibert and his suffragans, protested against such an act, and the Pope encouraged the bishops in a letter. The subject was the topic of discussion in the journals, in pamphlets, and in public debate. The objectionable section was finally rejected by the Chambers early in 1880.

In Germany the Government enforced the Falk laws with iron severity, so that more than half the dioceses were without bishops (Dr. Martin, Bishop of Paderborn, dying in exile in July), and a vast number of churches deprived of pastors. The negotiations, formal and informal, between the Government and the Holy See, continued at intervals, but no definite point was reached, although Falk was compelled to retire from his office. The Government in the same spirit began a series of prosecutions of the clergy and others at Marpingen, who had expressed belief in an apparition of the Blessed Virgin Mary. The course of the Government was so arbitrary and oppressive toward the witnesses that the accused were all acquitted.

In Italy the Government commenced a prosecution against the Archbishop of Chieti for acting without its recognition, but, after much vacillation, was finally defeated. A law making civil marriage compulsory, and punishing

Catholic clergy who married persons unless already married, drew forth a letter from the Pope and remonstrances from the bishops in all parts of the peninsula. During the year a Catholic Congress at Modena, encouraged by the Pope, showed a resolution to abandon the policy of abstention from the polls.

In Belgium, as in France, the Catholics were aroused by propositions to fetter their freedom in the education of their children, and the position of the Church was embodied in the pastoral letter of Cardinal Deschamps and his suffragans (September 1st), containing practical instructions for the use of confessors. Attempts were made to show that the bishops were not acting in harmony with the Holy See, but the Pope and the episcopate disavowed at once any difference of opinion.

The confraternities question in Brazil arose in a new form, and the claim of these associations (originally organizations of pious devotees, but recently made up of men having no sympathy with the doctrines or worship of the Catholic Church) to control the churches and the performance of divine worship was a peculiar state of affairs. Bishop Macedo protested against the seizure of a church at Nazareth, and religious services conducted there without the presence of the clergy.

In the United States, the dedication of the Cathedral of New York on May 25th, by Cardinal McCloskey and a vast array of archbishops and bishops, was an event which interested all, the cathedral being the finest and largest ecclesiastical edifice yet erected in the republic.

Among Catholics of note who died during the year 1879 were Augustine Bonetty, founder and editor for many years of the "Annales de la Philosophie Chrétienne," May 26th; Mother Mary Thomas Peacock, an American lady, foundress of the Sisters of the Holy Child Jesus, who died in the mother-house of her order in England, April 18th; Sister Marie de la Croix (Jeanne Jurgan), one of the foundresses of the Little Sisters of the Poor, August 20th; and Mgr. Gaume, author of the "Catechism of Perseverance" and other works, and an active advocate of the abandonment of the classics and the adoption of the writings of the Fathers.

ROON, ALBRECHT THEODOR EMIL, Count von, a German field-marshal, born April 30, 1803, died February 23, 1879. In 1813 he joined the corps of cadets at Culm, and two years later that at Berlin. He entered the 14th infantry as an officer in 1821, and studied at the Military Academy from 1824 to 1827, where he devoted himself particularly to military and geographical studies. In 1827 he became instructor in the Cadet School, in which position he published "Anfangsgründe der Erdkunde" (1834; 12th edit., 1868), and "Grundzüge der Erd-, Völker- und Staatenkunde" (3 vols., 1837-'40; 3d edit., 1847-'55), both of which soon attained a very large sale. He was employed

from 1833 to 1835 in the Topographical Bureau, was appointed in 1835 a teacher in the War School, and in 1836 was ordered to the general staff with the rank of captain, and at the same time was made a member of the chief military examination committee. At that time he wrote "Militärische Länderbeschreibung von Europa" (1837), and the first part of a military monograph entitled "Die Iberische Halbinsel" (1839). In 1842 he was attached to the staff of the 7th army corps with the rank of major. In 1843 he was ordered back to Berlin and intrusted with the military instruction of Prince Frederick Charles, whom he accompanied to the University of Bonn and on his travels in Italy and France. In 1848 he was appointed chief of the general staff of the 8th army corps, in which capacity he took part in the campaign in Baden in 1849. In 1856 he was appointed to the command of the 20th infantry brigade, and in 1858 of the 14th division. In the latter year he handed a memorial to the Prince Regent (the present Emperor) on the defects of the army, which was received favorably; and in 1859 he was appointed a member of the commission on the reorganization of the army, after having been previously raised to the rank of lieutenant-general. In December of the same year he was appointed Minister of War, and two years later Minister of Marine. The King had boundless faith in his military measures. His leading idea was to base the army on universal service for three years, in order to be ready for all contingencies, the Landwehr to be called out for the defense of the country whenever the line should take the field. On February 10, 1860, the new Minister of War laid his plans before both Houses of the Diet, declaring that there was no intention of breaking with the past, but the Prussian army must thenceforth be the people in arms. During the next few years stormy sittings were of frequent occurrence in the Chambers. As the originator of the new military law, General von Roon was the best-hated man in Prussia; but he clung with great tenacity to his plans, and a powerful ally soon joined him in Otto von Bismarck. The brilliant successes of the Prussian arms in the wars with Denmark and Austria, and particularly the rapidity with which the latter campaign was brought to a close, occasioned a complete revulsion of feeling in favor of Von Roon and Bismarck. His system was again put to the test in 1870, and the rapidity and perfect order with which the German troops entered France and overthrew the French Empire gained for Von Roon again the admiration of the people. On January 19, 1871, he celebrated at Versailles the fiftieth anniversary of his military life, when the Emperor expressed his gratitude for the great services he had rendered him and his house. On June 16th he was created a Count, and was otherwise richly rewarded. In December, 1871, he resigned the Ministry of Marine; but on January 1, 1873, he was appointed President of the Prussian

Ministry, an office which Prince Bismarck had temporarily resigned, while General Kameke was appointed his substitute in the Ministry of War. At the same time he was raised to the rank of field-marshal. But his health was unequal to the duties of his post, and in November he received permission from the Emperor to retire from public life. From that time he lived in complete retirement.

RUSSIA (EMPIRE OF ALL THE RUSSIAS), an empire in Europe and Asia. The Emperor, Alexander II., born April 29, 1818, succeeded his father, Nicholas I., March 2, 1855. The heir apparent is the Grand Duke Alexander, born March 10, 1845.*

The area and population of the great divi-

sions of Russia were estimated as follows in 1879 ("Almanach de Gotha," 1880):

DIVISIONS.	Square miles.	Population.
1. European Russia.....	1,895,514	65,664,910 (1870)
Poland.....	49,159	6,528,017 (1872)
Bessarabia.....	3,274	127,000
2. Grand duchy of Finland.....	144,228	1,968,626 (1877)
3. Caucasus.....	169,578	5,891,744 (1878-'76)
Government of Kara.....	9,950	600,000
4. Siberia.....	4,824,564	8,440,862 (1878)
5. Central Asia.....	1,283,486	4,401,576
Total.....	8,879,753	88,222,535

For religious and other statistics of the empire see "Annual Cyclopædia" for 1877 and 1878.

The foreign commerce of Russia in 1876 and 1877 was as follows (values in rubles):

COMMERCE.	IMPORTS.		EXPORTS.	
	1876.	1877.	1876.	1877.
Baltic ports.....	177,583,000	188,815,000	151,365,000	249,821,000
Overland.....	201,703,000	186,007,000	111,892,000	211,221,000
Southern ports.....	62,541,000	15,927,000	107,012,000	85,185,000
White Sea ports.....	962,000	712,000	9,548,000	12,015,000
1. Commerce with Europe.....	442,789,000	291,461,000	879,257,000	508,282,000
2. Commerce with Finland.....	10,828,000	9,080,000	12,028,000	12,752,000
3. Commerce with Asia.....	24,464,000	20,446,000	9,415,000	6,902,000
Total.....	477,581,000	321,087,000	400,700,000	527,986,000

On January 1, 1879, there were 21,840 kilometres of railroad in operation in Russia, exclusive of Finland. In the latter country there were 873 kilometres. The number of post-offices in 1877 was 3,678; of letters sent in 1878, 93,692,546; of wrappers, 6,689,953; of registered letters, 4,676,711; of money-letters, 7,692,640 (value, 2,494,115,000 rubles); of packages, 2,468,573 (value, 82,938,000 rubles); of newspapers, 63,350,064.

The definite treaty of peace with Turkey was signed on February 8th (see TURKEY), and on March 5th the Russians began to evacuate her territory. The condition of affairs in Eastern Roumelia gave occasion to Russia to address in March a note to the Powers, in which the suggestion was made whether it might not be advisable—nay, necessary—in the interest of the execution of the stipulations relative to that country, to make some temporary provisions calculated to tide over the transition between the cessation of the present provisional régime and the definitive organization of the province. The quartering in the province for one year of a mixed corps, in which every one of the signatory Powers would be at liberty to participate, would seem to Russia the best means to insure the execution of the provisions of the treaty respecting Eastern Roumelia. Supported by this force, the International Commission, after finishing the statute and having it sanctioned by the Porte in Constantinople, might return to Philippopolis, and, in concert with the Governor appointed by Turkey, introduce the instrument it had elaborated. This

proposition was not accepted by the Powers, and in May the Czar assured the Sultan in an autograph letter that he would see to it that the provisions of the Treaty of Berlin with regard to Bulgaria and Eastern Roumelia were carried out. (See BULGARIA and EASTERN ROUMELIA.)

One of the most important events in the history of Russia in 1879 was a new war in Asia. Officially it was announced as being directed against the Turkomans on the southeastern frontier of the empire, but it was commonly believed that its chief object was to capture Merv, the capital of the Tekke Turkomans. This city was in former centuries one of the most populous and important of Central Asia, and both Russians and English look upon it as a point of considerable strategic importance. The Russians have often been suspected of an intention to seize it, and the English have uniformly on such occasions violently protested against it. In 1875, when a Russian force had left the mouth of the Attek, on the southeastern shore of the Caspian, also for the alleged purpose of occupying Merv, Sir Henry Rawlinson, in his work "The British in Asia," expressed the opinion that England should rather declare war against Russia than consent to the occupation.* The Russian Government not only made no mention of Merv in its official announcements of the objects of this expedition, but expressly denied that it had any intention of taking that city. In the English Parliament, on July 13th, Mr. Bourke, in the

* For a fuller account of the Imperial family, see "Annual Cyclopædia" for 1877, article RUSSIA.

* For a full statement of the views of Sir H. Rawlinson and a brief historical sketch of Merv, see "Annual Cyclopædia" for 1875, pages 698-'9.

name of the English Government, said the Russian Government had formally assured Lord Salisbury that there was no intention of advancing upon Merv. One of the leading Russian newspapers, the "Golos," had, however, previously shown that the expedition could carry out its ostensible aim of chastising the Turkomans only by capturing and destroying their chief place of refuge; and a St. Petersburg correspondent to the "Norddeutsche Allgemeine Zeitung" of Berlin (July 8th), the organ of Prince Bismarck, explicitly stated that General Lazareff had been commissioned to capture and destroy Merv.

Before the expedition was ready to start, a severe blow was struck by the Turkomans. General Lomakin had collected 3,000 camels near the wells of Burnak, Kabil, and Sulmen, about 27 miles northeast of Krasnovodsk, where they were to await the beginning of the expedition. The Tekke Turkomans, having closely watched the proceedings of their enemy, on April 15th attacked Burnak, defeated the Russian guard, consisting of 2,000 men, and captured a large number of camels, which they carried away with them. Pursuit being made by reinforcements immediately sent from Krasnovodsk, the Tekke, whose march was impeded by the captured animals, were overtaken, and forced to confront the Russians. And now happened an event which forms a period in the history of Central Asiatic warfare. Instead of having recourse to their usual tactics of dispersing the camels and attacking the Russians in loose order, the Tekke dismounted, occupied a strong position half-way up a hillside, and, making the camels kneel down in front, fired from behind this living wall with the steadiness and rapidity of European sharpshooters. The encounter lasted till night, when the Tekke as well as the Russians retreated in opposite directions. The Tekke, leaving a dozen dead and some forty camels on the spot, marched east, carrying the rest of their booty with them; the Russians, having buried their dead, retraced their steps to the west, finding it too dangerous to follow an enemy whose strength had suddenly so very much increased.

The expedition did not get fairly under way until August. Owing to the glare of the sun and the sand, which was continually being blown about in the desert, large numbers of the troops suffered with diseases of the eyes, while the unwholesome water which they had to use also caused a great deal of sickness. On August 12th General Lazareff, the commander-in-chief of the expedition, died, and was replaced in September by General Tergukasoff.

The news received from the seat of war was very meager, owing to the strict censorship exercised by the Russian military officials. Enough was known, however, to prove that the ultimate object of the expedition was the oasis which was the center of the operations of the Akhal Tekke Turkomans. In the first engagements the Turkomans were everywhere

defeated, and disappeared in the desert. The Russians, commanded by General Lomakin (who temporarily succeeded General Lazareff after the sudden death of the latter), pursued them, and penetrated to the oasis, where they found signs of comparative prosperity and peace. Following the enemy from one deserted village to another, threatened only by guerilla troops of horsemen, the expeditionary force proceeded to attack the fortified position of Dengel Tepe, which appeared to be held by a strong body of Turkomans. No sooner did they do so than the surrounding hills began to swarm with hostile cavalry, and, though the assailants were repeatedly repulsed, the Tekke horsemen suffering losses after every charge and flying before the Russian fire, they were not discomfited. They retired upon a strong position, which General Lomakin attacked. The Russian forces were too weak for the task, and after vainly wasting their powers on the capture of some outworks, a combined assault was defeated by the Turkomans. During the retreat the latter fell furiously upon the retiring Russians, who barely escaped a terrible disaster.

A fact which was closely connected with the opening of the Turkoman expedition, and is of great importance in itself, is the turning of the Attek River into its old bed, which took place in June. In former times this river fell into the Caspian not far from the bay of Hassan-Kullin, about twelve versts from Tchikislav, the starting-point of the expedition; but nine years ago, in consequence of the Russians having taken possession of Krasnovodsk, the Turkomans, with enormous efforts, constructed a dike or dam near Bent, at a distance of about sixty versts from the mouth of the Attek, and by this means diverted it through the region of their winter quarters.

The internal condition of the empire continued to be one of revolutionary discontent. The Nihilists were as bold and aggressive as in any former year. Another great shock to public feeling was given on April 14th, when Alexander Solovieff attempted to shoot the Czar in front of the house of the military staff in St. Petersburg. The assassin was arrested, and was found to have capsules containing poison, which he could break in an instant, in his mouth. When asked why he had made the attempt, he answered that the task had fallen on him by lot, and he had no alternative.

This plot led to the adoption of some new extraordinary measures. Generals Todleben, Loris-Melikoff, and Gourko were appointed Governors-General with exceptional powers at Odessa, Kharkov, and St. Petersburg, and similar powers were conferred on the Governors-General of Moscow, Kiev, and Warsaw. These officers were authorized to remove from their districts all persons whose presence they considered pernicious; to subject civilians to martial law; to arrest on their own responsibility any person of whatever rank; to suppress

newspapers and periodicals; and generally to adopt whatever measures should appear necessary for the maintenance of public order. At St. Petersburg, Governor-General Gourko gave orders that a porter should be stationed day and night at the door of every house, whose duty it should be to watch that no unauthorized placards were posted up anywhere, and that no objects of a dangerous nature should be placed in the streets. Gunsmiths were ordered to furnish full lists of the goods in their warehouses to the commandant of the city, and were forbidden to sell except to purchasers who could present letters of authorization from that officer. Private persons possessing firearms must make the police acquainted with the fact, and must obtain a permit from the commandant of the city as a condition of their keeping them. The order commanding guards to be stationed before all the houses was found to be impracticable, and was finally not insisted upon. Regulations of a similar character, differing only in details, were made for all the principal towns of the empire.

Several weeks elapsed before the disorders appeared to be at all quieted, even under the most rigorous enforcement of these regulations. Bold attacks were made on officers of the Government and obnoxious persons in broad daylight; residences and offices of the police in some of the towns, as at Rostov, were plundered. The best parts of the towns of Irbit and Orenburg, places to which the Government was accustomed to consign political offenders, were burned down; fires were set at Uralsk, Petropolovski, Irkutsk, and other places; and many of the large towns were thrown into a panic by notices that they would be burned. During May 1,730 conflagrations occurred in the empire, occasioning damage to the amount of more than two million rubles; and the loss which had been inflicted on the country during the past six months was estimated on the 1st of June at 30,000,000 rubles. June was likewise prolific of fires. The number occurring during the month is given as 3,500, causing damage to the amount of 12,000,000 rubles. Only 900 of these were accounted for; the other 2,600 were attributed to public disturbers. Courts-martial were instituted at Kiev for the trial of the revolutionists, and a plot is said to have been discovered to blow up the court-room during the trial. The first group of persons tried included three noblemen, the daughter of a privy counselor, and a Prussian subject. A part of the number were found guilty of armed resistance to the police, and sentenced to death; others, who were convicted of conspiring against the state and social order, were sentenced to terms of penal servitude. Explosions which were attributed to the revolutionists took place in the police office at Omsk, at Nizhni-Novgorod, and in a powder-magazine near St. Petersburg. Numerous persons were arrested throughout the empire for having explosives or forbidden arms,

or for being engaged in manufacturing explosives. On the night between the 26th and 27th of June more than four hundred persons were arrested at Kiev, large stores of dangerous materials were found, and a secret press and revolutionary documents were discovered in near connection with the ecclesiastical seminary. Michael Solovieff, who attempted to assassinate the Czar in April, was tried in June, found guilty of belonging to a criminal association, the object of which was to overthrow by violence the institutions of the state, and was hanged on the 7th of the month. Several of his relatives were arrested and imprisoned. An imperial order was issued in July empowering the Governors-General to exercise their discretion in the cases of political offenders, whether to send them for trial before the military courts or the ordinary tribunals. The number of persons who had been convicted or were held under arrest exceeded anything that was before known in the history of the present reign, and reports became rife that the prisons were greatly overcrowded. On June 19th six hundred convicts were dispatched from Odessa in the ship Nizhni-Novgorod for the island of Saghalien, off Japan, where they were to serve their terms of punishment. The friends of the Government represented that they were for the most part persons who were guilty of common crimes, but others asserted that by far the larger part of them were revolutionists. The vessel sailed by the way of the Suez Canal and the Red Sea, and arrived at Nagasaki on August 1st. Reports of their frightful sufferings were officially contradicted. In November the Minister of the Interior sent out a circular to the governors of provinces, instructing them to order the rural police not to interfere with the public dances and amusements in the villages, as such interference had produced discontent among the rural population. The trial of Leon Mirsky, with seven persons charged with being his accomplices, for the attempted assassination of General Drenteln, chief of the gendarmerie, began in the military court at St. Petersburg on November 27th. All the prisoners were accused of belonging to a secret society whose object was to overturn the existing Government and to enforce a change of the social order of the empire. Mirsky was also accused specifically of the attempt to assassinate General Drenteln, of resisting the officers who came to arrest him, of fabricating false passports, and of inciting his fellow prisoners after they were arrested to revolt. The chief accusation against the other prisoners was that of concealing Mirsky after his attempt against General Drenteln. Mirsky acknowledged the commission of the offenses for which he was arraigned, and only pleaded that he had committed them for public, not for personal reasons, and asked not to be hanged as a common murderer. A sentence to death by hanging was imposed upon him, but was afterward

commuted to one of hard labor in the mines. Tury Tarkhoff, his principal accomplice, was sentenced to labor in a fortress for ten years.

Another attempt upon the life of the Czar was made on December 2d, when a mine was exploded under the railroad with the intention of blowing up the train on which he was entering Moscow. His Majesty, however, was not in the train which was blown up, and escaped. The mine which exploded had been dug out from a house near the line of the railroad which had been bought by the young man who occupied it about three months before, and was worked from the house by galvanic wires. The Czar, it was said, had been warned that an attempt would be made upon him, and changed the arrangement of the trains so as to mislead his assailants.

Minister Valuieff prepared in the earlier part of the year and submitted to the Czar a draft for a constitution, containing provisions for the formation of a central Assembly at the capital, to be composed of a certain number of state functionaries sitting *ex*

officio, and of deputies elected by the provincial and district Assemblies already in existence. The scheme did not contemplate that this Assembly should enjoy the right of proposing new laws; but it would be empowered to discuss projects of laws submitted to it from above, and its members would be entitled to question high officers having seats in the Chamber, and to criticise generally the action of the Government. In November Prince Gortchakoff decided to retire from the office of Chancellor of the Empire, and Mr. Valuieff was designated to succeed him. It was believed that the Czar had at last determined to institute the reforms which had been demanded for so long a time, and that he had given favorable consideration to the plans of Mr. Valuieff. Before there was time to take definite action on the subject, however, the attempt was made to blow up the Czar's train at Moscow. The Czar's mood was immediately changed; he rejected Mr. Valuieff's schemes, saying that he wanted the plans of men of action, not of sentimentalists, and dismissed his newly appointed Minister.

S

SERVICE, UNITED STATES MARINE HOSPITAL. The Marine Hospital Service of the United States was established by an act of Congress passed July 16, 1798, for the relief of sick and disabled seamen. This act was passed after the subject had been before Congress for several years; and while it appears to have originated in a memorial of the Boston Marine Society, yet "hospital money" had been collected in the colonies since 1730, and the system must have been more or less familiar to Congress. The first building known to have been set apart as a hospital exclusively for seamen, among English-speaking peoples, was the palace commenced by Charles II. at Greenwich, which after the battle of La Hogue (1692) was ordered by Queen Mary to be completed "as a retreat for seamen disabled in the service of their country." (Macaulay.) After the death of the Queen, King William caused to be erected, under the superintendence of Sir Christopher Wren, the magnificent "Royal Hospital for Seamen at Greenwich," which Macaulay has alluded to as "the noblest of European hospitals." The seamen of the American colonies were taxed to support this hospital by an act of Parliament passed in the second year of the reign of George III. Instructions given to Patrick Gordon, Esq., Deputy Governor of the Province of Pennsylvania, February 2, 1729-'30, show that the sum of sixpence per month was required to be deducted from the wages of all seamen, English subjects, sailing in and out of American ports. Four receivers were appointed for Pennsylvania: Richard Fitzwilliam and John Moore, Philadelphia; Alexan-

der Keith, Newcastle; and Henry Brooke, Lewes. ("Pennsylvania Archives," vol. i., p. 251.)

This lesson was not lost on the colonies, for as early as October, 1780, the Commonwealth of Virginia enacted that the sum of ninepence per month should be collected as "hospital money" from the pay of all seamen and marines in the State. The naval officers were constituted the collectors of the tax, and a commission of five per centum was allowed on the moneys collected. In October, 1782, a law was passed changing the amount of the tax from ninepence to a shilling per month. On December 20, 1787, a law was passed establishing a marine hospital, and authorizing the appointment of a commission by the Governor to select a site in the town of Washington, county of Norfolk, Virginia. (Hening's "Statutes at Large," vol. xii., p. 494.) The State of North Carolina enacted a law providing for the creation of a hospital fund in 1789, and by a subsequent act (1790) the commissioners of the poor at the different ports of entry were empowered to act as collectors. (Haywood's "Manual of the Laws of North Carolina," Raleigh, 1801, p. 350.) The tax was a capitation tax. Captains on arrival from a foreign voyage were required to pay 5s., mates 2s. 6d., and each member of the crew 1s. 6d.

On August 28, 1789, a bill was introduced into Congress providing for the establishment of hospitals and the adoption of harbor regulations, but was indefinitely postponed. To the Boston Marine Society is due the credit of presenting the first memorial to Congress on this subject.

The Society record shows that at a regular meeting held at the Bunch of Grapes tavern, Boston, October 12, 1790, Captain Mackey presiding, it was "Voted, That a committee be appointed to consider what spot of ground may be the most convenient for the erecting a marine hospital, the kind of building that will be the most convenient, and its expense, also to make a calculation of the annual income that will arise from a small tax on seamen for the support of the said hospital, and report at the next meeting." The committee consisted of Captain Mackey, Mr. Tudor, Mr. Russell, Mr. Hodgdon, Dr. Dexter, Dr. Scollay, and Captain Deblois. At the annual meeting of the Society, held at the Bunch of Grapes tavern November 2, 1790, the committee reported, "That from a variety of considerations they are of the opinion that some spot of the heights of Charlestown east of the town is the most eligible situation for such a building"; and it was then voted, "That the committee be further instructed to draw a petition to Congress setting forth the utility of a marine hospital, and pointing out the means of supporting one." On January 4, 1791, the petition was approved by the Society and ordered to be sent forward. This petition is not now extant, but we learn that it was presented in the House January 27, 1791, and that it prayed the establishment of three marine hospitals in the United States for the care and support of aged and disabled seamen, one for the Southern, one for the Middle, and one for the Eastern States. The petition was tabled, but finally referred to the Secretary of the Treasury. A short time previously the Commonwealth of Virginia had passed an act authorizing the sale to the United States of the marine hospital at Washington, Va.; and on April 17, 1792, the Speaker laid before the House the letter of the Secretary of the Treasury, accompanying his report on sundry papers referred to him, concerning a marine hospital at the town of Washington, and on the memorial of the Marine Society of Boston on the subject of marine hospitals, which was read and ordered to be referred to Mr. Ames, Mr. Sterret, and Mr. Parker. (House Journal.) On April 28, 1792, Mr. Ames reported, but his report was tabled. On November 19, 1792, the House took action on the subject by appointing a committee "to prepare and bring in a bill or bills for the relief of sick and infirm seamen." Mr. Laurence, Mr. Goodhue, Mr. Benjamin Bourne, and Mr. Barnwell were the committee. It was further "ordered that the report of the Secretary of the Treasury which was made on the 17th of April last, together with the report of the committee thereon, . . . be referred to the same committee." On January 21, 1793, Mr. Williamson reported a bill, which was read and ordered to be committed to the Committee of the Whole. No further action was taken at this time, but at the next session an act was passed providing for the aid of seamen in foreign countries, and two agents were ap-

pointed, ~~one~~ to reside in Great Britain and the other in the West Indies. The President in his message of December 7, 1794, informed Congress that the agent for Great Britain had declined the appointment, and the duty of carrying out the law had devolved on the United States Minister. On February 28, 1797, a committee appointed to inquire into the operation of the act for the relief and protection of American seamen, reported that "the committee find that numbers of seamen, as well foreigners as natives, arrive at the different ports of the United States in such a disabled situation that they either become a great burden to the public hospitals, where any such are established, or are left to perish for want of proper attention. They are of the opinion that a sufficient fund might be raised for the support and relief of sick and disabled American seamen, as well in foreign ports as in the United States, either by an additional tonnage duty on all vessels entering the ports of the United States, or by a charge on the wages of all seamen shipped within the United States, proportioned to the length of the voyage, to be paid or secured by the master and deducted from the wages of his crew." The committee recommended the passage of the following resolutions: "Resolved, That provision ought to be made by law for collecting the sum of — cents per month from the wages of every seaman sailing from any port of the United States, to be appropriated—1. To the temporary support and relief of sick or disabled seamen of the United States; 2. To the foundation of hospitals for the relief of such sick and disabled seamen (when a sufficient fund shall be collected)." But the law was not passed until July of the following year. This law provided for the collection of twenty cents per month from the wages of all seamen, and that any surplus remaining after defraying the expenses should be invested in stock of the United States; and the President was authorized to receive donations of land or buildings, and when necessary to erect hospitals. The President was further empowered to appoint directors of the marine hospitals, under whose direction the fund assigned to each port was to be expended, and persons so appointed were allowed no compensation except actual expenses. An additional act passed March 2, 1799, authorized the money collected within any one State to be expended within such State, except the States of New Hampshire, Massachusetts, Rhode Island, and Connecticut (which it was evidently intended to consolidate for the support of the hospital at Charlestown), and authorized the Secretary of the Navy to deduct from the pay of the officers, seamen, and marines of the navy the hospital tax of twenty cents per month, and declared them entitled to the same benefits and advantages of the hospital fund as merchant seamen. It appears that the law did not go into effect immediately, for Secretary Oliver Wolcott wrote to General Benja-

min Lincoln, Collector at Boston, David Austin, New Haven, and Allen McLane, Wilmington, Del., under date of July 20, 1799, as follows:

SIR: Having received no returns for the quarter ending 31st March last of the hospital money collected in your district, for the use of sick and disabled seamen as indicated by law, I will thank you to immediately forward to this office returns of the moneys collected by you during that period for the purpose aforesaid. I will also thank you to conform to the instructions of the Comptroller of the Treasury on that head, by transmitting quarterly returns for the time to come.

I am with consideration, Sir,
Your obedient Servant,
OLIVER WOLCOTT.

The instructions to which he refers were as follows:

TREASURY DEPARTMENT, May 24th, 1799.

BENJAMIN LINCOLN, Esq., *Collector of Boston.*

SIR: I herewith transmit a Copy of an Act of Congress passed on the second of March last entitled "An Act in addition to an Act for the relief of sick and disabled seamen."

It was hoped that an arrangement could have been formed before this time for the establishment of permanent Hospitals.

It appears, however, that this subject has been placed by the Act of the last session "to regulate the Medical Establishment" under the immediate superintendence of the Physician General; the object of this communication is therefore confined to a provision for the temporary relief and support of sick and disabled seamen in public and private service.

For the present, and until experience shall have shown the expediency of a different arrangement, the moneys collected in the State of Massachusetts will be expended under your directions at or near Boston, and accordingly the sums collected at the outports of the State will from time to time be placed in your hands in pursuance of special directions, of which you will be advised.

The persons entitled to relief from the fund are Officers, Seamen, and Marines of the Navy of the United States, and Masters, Marines, and Seamen employed in private or Merchant Vessels. I think proper to mention, that there may be some danger of a diversion of the fund for the maintenance of persons who ought to be relieved as paupers under municipal regulations. As abuses of this kind, if practised to any considerable extent, will defeat the humane intentions of Congress in the establishment of permanent Hospitals for the support of disabled seamen, they ought to be carefully prevented.

It is, however, the object of the Law that the expenditures of the fund for temporary relief should be made at the Hospital or other proper institutions now established in the Ports of the United States. You will of course endeavor to fix by precise agreements the conditions upon which sick and disabled seamen shall be received and supplied with whatever their necessities may require, and will transmit the Copies of the Contracts which may be formed to this Office. In cases where arrangements can not be made you will pursue established usages respecting similar expenditures, observing all possible economy.

It is not expected that you should personally superintend the details of expenditure; an agreement therefore with some individual or corporation, that the fund shall be properly applied, appears to be indispensable. The accounts must be rendered to you at least quarterly, supported by such vouchers as are usual, and as circumstances will admit of being taken, which after examination will be paid out of the moneys in your hands.

You will be pleased to keep all your accounts of receipts and expenditures for this Fund distinct from your other accounts. The quarterly abstracts of the

Fund are to be rendered agreeably to the form prescribed by the letter of the Comptroller of the Treasury dated the 19th of September, 1798. The quarterly accounts of expenditure are to be rendered agreeably to the subjoined form, and the whole regularly introduced into an account current which is to be transmitted every quarter.

I am with respect, Sir,
Your obt Servant,

(Signed) OLIVER WOLCOTT.

Abstract of moneys paid for the relief of sick and disabled seamen by _____, Collector of the Customs for the District of _____, in the State of _____, from _____ to _____.

Date of payment.	Number of voucher.	To whom paid.	NO. OF PERSONS SUPPLIED.		TIME SUPPLIED.		AMOUNT PAID.
			Of the navy.	In private service.	Months.	Days.	

A similar letter was written to John Davis, Collector of New Berne, N. C., and George Latimer, Esq., Collector, Philadelphia.

A letter was written to General Benjamin Lincoln, October 4, 1799, stating that, in order to condense the moneys collected in neighboring districts, collectors will be notified to send the same to him; * also stating: "The collection of the duty on seamen's wages will be attended with some trouble, for which no compensation is established by the existing law. The object being humane and benevolent will, I presume, interest your attention. If a commission shall be hereafter allowed, I will authorize deductions from the future returns." (Similar letter of same date to Collector at New Berne, N. C.)

(FORM.)

I hereby acknowledge to have received of _____, Collector of the Customs for the District of _____, the sum of _____, being the amount of moneys collected by him for the support of the Marine Hospitals of the United States from _____ until _____, agreeably to a letter of advice from the Secretary of the Treasury, dated _____, for which I have signed duplicate receipts.

A few days later a letter was written to General Benjamin Lincoln, regarding the establishment of the hospital:

TREASURY DEPARTMENT, May 29, 1799.

BENJAMIN LINCOLN, Esq., *Collector of Boston.*

SIR: You will receive by this mail a letter on the subject of a marine hospital for sick and disabled seamen. Without meaning to decide absolutely upon the point, I think proper to point your attention to Castle Island as being a proper place for the establishment. If on reflection you think any other place preferable, you will be pleased to mention it. †

* Letters similar to the above were written to the following Collectors: William Tuck, Gloucester; Dudley A. Tyng, Newburyport; Joseph Helder, Salem; Samuel R. Gerry, Marblehead; William Watson, Plymouth; Joseph Otis, Barnstable; Stephen Hussey, Nantucket; John Pears, Edgartown; Edward Pope, New Bedford; H. Bayliss, Dighton; Asa Adams, Ipswich.

† Castle Island had formerly been used as a quarantine station. "The General Court enacted in 1738 that the com-

Doctor Thos. Welsh has been particularly recommended as a gentleman well qualified for the appointment of Physician to the Hospital. I take the liberty to mention his name and to request you to ascertain the conditions upon which he will serve, and to arrange the terms of compensation.

I am, with consideration, Sir,
Your m^o obdt. Servant,
OLIVER WOLCOTT.

At this time Dr. Thomas Welsh had a contract with the Secretary of War for attending the sick of the troops on that island, and of the recruits then raising in Boston. Dr. Welsh had served with distinction in the Revolutionary war, and was appointed Physician to the Marine Hospital in June, 1799. On the 21st of February, 1800, Dr. Welsh submitted his regulations, and they were approved by the President March 11, 1800.

The purchase of the Washington Point Hospital, Virginia, was completed in 1801, but the building was not immediately repaired or occupied.

The following letter to the Collector at Alexandria shows how far the fund was from being a general fund, and shows the application of the rule that all money should be expended within the collection district where it was collected:

TREASURY DEPARTMENT, }
December 12, 1801. }

CHARLES SIMMS, Esq.,
Collector of Alexandria.

SIR: The President has directed that the Hospital moneys collected in the Columbia District, since the assumption of jurisdiction by Congress, may be expended if necessary within the district.

You may therefore apply any moneys received by you on that account since the last day of March, 1801, toward the relief of sick seamen in Alexandria; but there being no other funds provided for that object, you must be careful not to exceed that sum.

I have the honor to be, very respectfully, Sir,
Your obedient Servant,
ALBERT GALLATIN.

The port of New Orleans, although at this time under Spanish rule, had a large and increasing traffic with the United States, which resulted in the employment of a considerable number of sailors. The following extract of a letter from Evan Jones, Esq., and E. M. Bay, Esq., of Charleston, to the Secretary of State, describes the situation at that time:

NEW ORLEANS, August 10, 1801.

A great number of American citizens, especially seamen and boatmen from the Ohio, die here yearly, for want of a hospital into which they might be put and taken care of—not that they are refused admittance into the Spanish Poor Hospital, but that building is by much too small for the purpose. No public house of any reputation will take them in, and consequently they lie in their ships or boats, or get into wretched cabins, in which they die miserably, after frequently subjecting the humane among their countrymen to much trouble and expense.

Will not this be an object, Sir, worthy the attention

manding officer at Castle William, and the Keeper of the Light House, shall notify and direct the masters of all vessels coming near them, wherein any infectious sickness is, or hath lately been, at their coming in, to come to anchor as near the before-mentioned house as may be." (Drake's "Boston," p. 604.) Secretary Wolcott, being a physician and a native of New England, was doubtless aware of this circumstance.

of the Government of the United States? And might not a fund be easily established for the preservation of those poor people, by imposing a light tax upon every vessel and boat that comes in, as well as upon every seaman and boatman?

About two hundred vessels have entered here from sea during a twelvemonth past, and allowing eight men only to each, it makes 1,600. Perhaps from 350 to 400 boats have come down from the Ohio, etc., during the same time, and allowing four men to each, it would make about an equal number of men. A small sum from each, added to something from every vessel and boat, would probably produce a capital equal to the exigency.

("American State Papers," vol. vii., "Commerce and Navigation," p. 493.)

Extract of a letter from E. M. Bay, Esq., to the Secretary of State, dated at Charleston, November 4, 1802:

It will readily occur to you, Sir, that thousands of our fellow citizens must soon be employed in navigating the ships and boats which must ever be used as the means of transporting these commodities [those of the Western country] from one place to another. Now, Sir, when we take into consideration the climate and season of the year when this commerce must be carried on, the risk to our citizens must be multiplied in a high degree. It is well known that the Western rivers can not be conveniently navigated into the Mississippi until the breaking up of the frost in the spring of the year. It is then that that great river begins to rise, and it generally remains up until July. The great distance and unavoidable impediments naturally in the way will always carry over these commercial transactions to so late a period as to leave the great bulk of those employed in them at or about New Orleans in the sickly season of the year; which, in that low, flat, unhealthy Southern climate, is fatal in the extreme to the strong, robust constitutions of our Western brethren; hence many of them fall victims to climate and disease, leaving families and friends at a great distance from them.

The want of proper accommodations for poor and infirm seamen and boatmen at New Orleans is another very serious inconvenience our poorer class of fellow citizens are much subjected to in that place. It is really pitiable to see such numbers of distressed objects as sometimes present themselves to view in the sickly months, who have been left to shift for themselves, after their employers have made their markets. Something like an hospital establishment, to be superintended by American physicians, would go a great way to alleviate the distresses of these useful men. I mentioned American physicians because our people are strongly prejudiced against those of the Spanish faculty; and generally not understanding the language, they derive little or no benefit from them.

("American State Papers," vol. vii., "Commerce and Navigation," p. 493.)

The following general report was made by Secretary Gallatin on the condition of the service:

TREASURY DEPARTMENT, }
February 16, 1802. }

. . . . The only ports where hospitals have been established, or temporary relief afforded to the seamen, are:

1st. Boston, Newport, Norfolk, and Charleston, South Carolina, where marine hospitals have been altogether established under the laws of Congress, exclusively appropriated to the use of seamen, and solely supported out of the funds raised under the authority of the United States. The hospital at Newport has lately been discontinued.

2d. Baltimore, where the hospital is in the same situation as to its funds, but is placed under the control of the Board of Health.

3d. New York and Philadelphia, where sick seamen

are received in the city hospital at a fixed rate per week, paid out of the marine hospital fund.

4th. Portland, New London, Wilmington, North Carolina, Newbern, Edenton, and Alexandria, where temporary relief is afforded in private boarding houses.

5th. Savannah, from which no returns have been received.

By the statement B it appears that the whole sum received from seamen, either in private or in public service, amounts to 147,875 dollars and 58 cents, of which 6,185 dollars and 33 cents have been applied to the purchase of the hospital at Gosport, near Norfolk, and 74,636 dollars and 51 cents have been expended for the relief of sick seamen; that 73,761 dollars and 61 cents remain unexpended in the hands of sundry collectors and agents, and that 6,707 dollars and 87 cents are due to certain agents who have expended more than has been received by them.

This last circumstance has taken place in Newport, Norfolk, and Charleston, namely, in three of the four marine hospitals which have been established; and it will be perceived, by a recurrence to the same statement, that to those three places the navy fund has been exclusively applied; but this last fund being nearly exhausted, it is impracticable to continue any longer the established hospitals at Norfolk and Charleston, unless Congress shall think proper to grant them some aid, or to make such alterations in the law as will permit a more general application of the fund.

Under existing circumstances, if no alteration shall be made, it will be necessary to write to the collectors of both places to discontinue *in toto* the hospitals after the 31st of March next. For the advances made by them must, by this time, exceed twelve thousand dollars; these have been paid out of the proceeds of the duties on import and tonnage, and cannot be admitted to their credit in their accounts as collectors. It will be necessary for them to continue to collect the seamen money until they shall have been fully reimbursed for their advances.

If it be asked why the funds have proven insufficient in those two places, the following reasons, it is believed, may be assigned: 1st. The establishment of an hospital, instead of having had recourse to city or State institutions, as in Philadelphia and New York, which has drawn with it all the expenses of superintendence, attending physicians, etc. For what reason the Gosport hospital was purchased from the State of Virginia, I am at a loss to know; but if it was intended for the navy, it should be supported out of the funds appropriated for that department and placed under its control. The building is much too large, and in an unfinished state, and wants immediate and expensive repairs. 2d. Those two seaports are more expensive, and generally, so far especially as relates to non-residents, more sickly than the more northern ports. 3d. The provision of the law which makes seamen on board coasting vessels pay only in the port to which they belong, is unjust in its operation, and bears more particularly on the Southern ports.

It is necessary to state that complaints are frequently received from those ports where no relief has yet been granted; the seamen complaining that they pay without deriving any benefit from it. This may be the case in some instances; but it is doubtful whether the application of the funds in such manner that they might find relief in all the important ports of the Union, may not be more beneficial to them than a provision in the ports where they reside, and where they want it least.

Whilst the expenditure of the money is restricted to the port or State where it is collected, it cannot be considered in any other light than as a municipal establishment, and would more conveniently be placed under the control of the State itself.

I have the honor to be, very respectfully, Sir,

Your obdt. Servt.,

(Signed) ALBERT GALLATIN.

The President of the United States.
("American State Papers," vol. vii., "Commerce and Navigation.")

On May 3, 1802, an act was passed amending the act of 1798, by which the moneys collected on account of the hospital tax were constituted a general fund; the sum of \$15,000 was appropriated for the erection of a hospital at Boston; the President was authorized to take the necessary measures for providing relief at New Orleans; masters of every kind of river-craft entering the port of New Orleans were required to pay the hospital money at Fort Adams; the President was authorized to appoint a director for the hospital at New Orleans; sick and disabled seamen from foreign vessels were authorized to be admitted into the marine hospitals on the application of their respective commanding officers; and it was further enacted that the directors of the marine hospitals should be held accountable in the same manner as other receivers of public moneys, and they were allowed a commission of one per centum on the money disbursed.

On May 6th the Collector at Boston was requested to designate a site for the hospital; but on the 21st of June the following letter was written him:

TREASURY DEPARTMENT, }
21st June, 1802. }

BENJN. LINCOLN, ESQ.,
Collector of Customs, Boston.

SIR: I have the honor to enclose a letter from the Secretary of the Navy to Samuel Brown, Esq., directing him to designate the ground, not exceeding five acres, which, out of that purchased for a Navy Yard, is to be appropriated for a Marine Hospital.

In order to obtain an eligible plan, it appears proper and I request you to insert in one of the newspapers an advertisement offering a premium of 50 Dollars for the most approved plan of an hospital of 4,000 square feet area, two stories of 10 and 8 feet high, with cellars below; the rooms for the sick to be well aired, and of varied sizes from 12 to 20 feet square; the convenient distribution of the rooms and economy of space and construction will be principally regarded in the decision.

A ground plan, elevation, and section will be expected to be transmitted to the office of the Secretary of the Treasury, on or before the 15th day of August next.

Plans not approved shall be returned.

I have the honor to be, respectfully, Sir,

Your obedient Servant,

ALBERT GALLATIN.

The hospital received from the State of Virginia was in a dilapidated condition. On August 6, 1802, \$600 were ordered to be expended in the construction of a new wing, and the entire roof, which was rotten and insecure, was ordered repaired at a total expense of \$1,500.

A letter was written to Collector Robert Purviance at Baltimore, in regard to the expenses of that port, as follows:

TREASURY DEPARTMENT, }
August 6th, 1802 }

ROBERT PURVIANCE, ESQ.,
Agent Marine Hospital, Baltimore.

SIR: Your letter of the 8th ult. was duly received. It is expected that the expenses attending the Baltimore Marine Hospital may exceed the collections made on that account in that port, but, at all events, they should not exceed the total amount collected in the State. The rule adopted in other ports, and

which I would recommend in yours, is to confine the admission to seamen in actual service belonging to a vessel then in port.

I have the honor to be, respectfully, Sir,
Your obedient Servant,

ALBERT GALLATIN.

A reward of \$50 having been offered for the best plan for the hospital at Boston, and only one having been received, that one was adjudged the best, and the author received the money, although the Secretary considered it necessary to make certain alterations, as the following letter shows:

TREASURY DEPARTMENT, }
October 11th, 1802. }

SIR: I enclose the only plan which has been received for a Marine Hospital at Boston, in consequence of the public advertisement inserted in your newspaper for that purpose. It was transmitted by Asher Benjamin, and although it is not possessed of any great merit, yet, unless you have received some other, we should use it with a few trifling alterations. Mr. Benjamin will in that case be entitled to the reward, but he should give some explanation concerning the thickness of walls and partitions, and the precise absolute dimensions of the building. If you shall have received any other plan, I will thank you to transmit the same to this Department; but if none has been received, the enclosed, with the following alterations in the second floor, may be considered as adopted. Alterations of the second floor, marked with a pencil on the plan: Let the corner rooms be on the same plan as in the first floor; that is to say, that at each end of the building, instead of a room 18 by 19, two 9 by 18 each, and a passage between; there will be a room 18 by 20, and one 16 by 18. Let the four rooms 9 by 16 in the original plan be converted into two rooms 18 by 16. Upon a supposition, then, that no other plan has been received by you, I have to request that you will take the necessary measures to form a contract for the erection of the Marine Hospital in conformity to the enclosed. I presume that the mode adopted for light-houses, that of a public advertisement, will be the most eligible. The building should be brick, the cellar stone; the whole not to exceed the sum appropriated, and to be completed within the course of next summer, at farthest by 1st December, 1803. You will be able to judge of the details necessary to be inserted in the contract in order to secure the best materials, good workmanship, and a compliance with the intended plan. Whenever you shall have received proposals, I will thank you to compare them and transmit the same, with your opinion thereon, to this office.

I have the honor to be with respect, Sir,

Your obedient Servant,

ALBERT GALLATIN.

The "Columbian Centinel" of October 30, 1802, contained the advertisement for the erection of the new building. The advertisement is very lengthy; the following is extracted:

A MARINE HOSPITAL is to be erected by the United States in Charlestown, on the North Easterly part of the Land purchased to accommodate the Navy Yard, on such part thereof as shall be hereafter directed. In general, the HOSPITAL is to be one hundred and fourteen feet long and thirty-nine feet wide, to be built with brick, two stories high, and a well stoned cellar under the whole. [Very complete details follow, and the advertisement concludes as follows:] In a transaction of this kind, it is difficult to give a minute detail of all the particulars, which must be embraced by a full execution of the plan. In order therefore to avoid any mistakes or painful questions relative to this business, the plat of the building may

be seen at the *Collector's Office* in Boston at all times, prior to the first day of December next, as also the paper on which the dimensions of the timbers [are stated]. The public attention is invited to this benevolent and important object. Those who shall wish to contract for the erection and completion of the hospital, with the appendages, will send their terms in writing, sealed, to the subscriber.

(Signed)

B. LINCOLN.

On November 10, 1802, Secretary Gallatin addressed a letter to Collector Lincoln approving the advertisement and the general arrangement of the building, but "presumes that until the establishment may be fixed on a more extensive scale than is at present contemplated, the nurses may and would be better accommodated on the first or second floor than in the cellar." The President, December 20, 1802, appointed Dr. Charles Jarvis physician of the Charlestown hospital, at a salary of \$1,000 per annum, to take effect when the sick should be removed to the new hospital. During the year 1803 it was found that the fund was insufficient to meet the demands upon it, and the sick arriving at the smaller ports were furnished transportation to the large seaports whenever able to bear the journey. In this year the President appointed a physician to the hospital in New Orleans, as the following shows, which also gives in detail the general principles on which the service was administered:

TREASURY DEPARTMENT, }
April 14, 1804. }

H. B. TRIST, Esq.,

Collector, New Orleans.

SIR: The laws respecting sick and disabled seamen being extended to the port of New Orleans, you are appointed, as other Collectors are, in their respective ports, the Agent for that purpose.

No instructions as to the mode of collecting the 20 cents per month from seamen, and accounting for the moneys thus received, appear to be necessary, in addition to those you have already received as Collector of Fort Adams, unless it be to remind you that all seamen belonging to vessels of the United States, including of course those owned in Louisiana, are subject to this tax, those engaged in foreign trade being required to pay it at the time of making entry from each foreign voyage, and those engaged in the coasting trade at the time of taking out the enrollment or license; and to observe that, as some doubts may exist whether the Act of May 3d, 1802, still continues operative so far as to make it necessary for the masters of boats, rafts, and flats going down the Mississippi to New Orleans to make report to the Collector of Natchez of the number of persons employed on board, and to pay to him the amount of the tax on persons thus employed, it will be proper that you should require such report and payment from the masters of boats, etc., coming down the Mississippi in all cases where it shall not appear satisfactorily to you that the tax has been paid previously at Natchez.

The tax cannot be demanded of seamen belonging to foreign vessels; but if application is made for the admission into the Hospital of such seamen, they are to be admitted on the master's paying seventy-five cents per day for each seaman, as provided in the fifth section of the Act of May 3d, 1802.

The fund produced by the tax of 20 cents per month on seamen being much less than would be necessary to afford relief in all cases, it becomes requisite to provide only for the most urgent and to economize in the expenditures as much as possible. With this view it has been prescribed to the agents in the several ports of the United States, and you will consider it as

a rule for your government, not to afford relief from the Marine Hospital fund to any person claiming to be a seaman, who shall not, at the time of application for assistance, belong to some vessel or boat then actually in port. This rule, together with the limitation of the sum of five thousand dollars, including the salary of the Physician of the Hospital, beyond which the whole annual expenditure must not be permitted to extend, is all that can be prescribed in a general way as to the mode of granting relief or the extent to which it may be carried. Dr. William Barnwell of Philadelphia has been appointed by the President Physician to the Hospital, with a salary of one thousand dollars per annum, which sum you will pay to him in quarterly payments, at the expiration of each quarter, from the time when he shall leave Philadelphia for New Orleans, which will be shortly, and of which you will be advised. Until he shall arrive you will please provide such medical attendance for the sick seamen as shall appear proper.

The sick seamen have been provided for heretofore under the direction of Mr. Clark, in the "Hospital of Charity," they being charged by the managers of that institution with the bread, meat, etc., consumed by them and their attendants, and a proportionable part of the general expenses of the Hospital. This mode may be still pursued if it shall be deemed the most economical and best calculated for the convenience and comfort of the sick, or they may be attended in any other public building fit for the purpose which the governor may assign or which can be obtained with his permission; or if it shall be more advisable, the sick may be placed out and attended in private houses, as is practiced in some of the ports of the United States; though, from my present view of the subject, this appears to be the least eligible mode.

A quarterly account of the payments made by you for this object, supported with the proper vouchers, is to be rendered to the Comptroller of the Treasury, in which you are authorized (by the Act of May 3d, 1802) to charge a commission of one per cent. on your expenditures. You will be regularly advised by the Comptroller of the settlement of this account, which after such advice you will charge in your general account current as a debit to the United States, and which will be so admitted on your transmitting a receipt of the form and in the manner which will be prescribed by the Comptroller.

I am very respectfully,
Your obedient Servant,
ALBERT GALLATIN.

An editorial in the "Medical Repository," vol. vi., New York, 1803, says of the establishment of the hospital at New Orleans:

On account of the increasing transportation of produce on the Mississippi, an additional number of American seamen and boatmen find a rendezvous at New Orleans. Many of these from the Ohio and upper country, as well as from the Atlantic ports and the ocean, have died annually in the most forlorn condition at that place. These considerations moved the Government, by a wise and humane proposition, to adopt measures for the support of a hospital in that city for their relief, and to ask permission of the Spanish Government to establish the same.

On March 5, 1804, a memorial was presented in the House from citizens and mariners of Baltimore, protesting against the ruling of the Department that seamen should be excluded from relief who were not actually employed on board a vessel at the time of their application; declaring also that the passage of the law creating a general fund was a public misfortune, and that this alone prevented the accumulation in Boston, New York, Philadelphia, and Baltimore of a handsome surplus which might be

devoted to provide a "fund for the permanent relief of decrepit or superannuated seamen exhausted in the service, though not proper objects of a sick infirmary." ("American State Papers," vol. vii., p. 572.)

In this year a committee was appointed "to inquire into the expediency of exempting pilots from paying hospital money for their apprentices." The committee, considering that the apprentices "receive in professional skill an equivalent for wages, and that they are in fact seamen, it would seem to be a liberal construction of the statute to make it include those persons, and thereby extend the advantages to them"; and the committee submit their opinion that it is inexpedient for Congress to make any declaration concerning the payment of hospital money by pilots for their apprentices. ("American State Papers," vol. iii., "Commerce and Navigation," p. 571.)

Dr. Barnwell was directed, May 3, 1804, to purchase in Philadelphia the necessary medicines for the equipment of the New Orleans hospital, and the Collector, Peter Muhlenberg, Esq., to pay the bills therefor and advance one quarter's salary. On June 18, 1804, the President directed that the "temporary provision" for sick seamen should extend to New Haven, Conn., Wilmington, Del., and Providence, R. I.

On August 30, 1805, the ruling of the Department was defined regarding fishing vessels as follows:

TREASURY DEPARTMENT, }
30th August, 1805. }

DANIEL COFFIN, Esq.,
Collector, Nantucket.

SIR: Your letter of the 17th inst. was duly received. Scamen employed in fisheries are not expressly excepted from the payment of hospital money; but that payment is confined to vessels licensed for the coasting trade, and to vessels arriving from foreign ports. It results that a vessel exclusively employed in the fisheries, and which has not been during her voyage in a foreign [port], is exempted, but she is not so exempted as a fishing vessel, but merely as being neither a coasting vessel, nor arrived from a foreign port.

It follows that every vessel arriving from a foreign port is equally liable to pay the hospital money, and must pay it on the principle fixed by the words of the law, viz.: for the time which has expired since the vessel was last entered at any port in the United States. No exemption is made in favor of vessels which may have been during a part of that period employed in fisheries, nor can any deduction be made on that account by the Collector.

I have the honor to be respectfully,
Your obedient Servant,
ALBERT GALLATIN.

The expenses at Philadelphia having largely exceeded the receipts, the Collector at that port was requested to devise a plan for the exclusion of certain beneficiaries; which he did, but at the same time transmitted a communication from a magistrate of that city, which was re-sented by the President, as the following letter indicates:

TREASURY DEPARTMENT, }
December 20th, 1806. }

PETER MUHLENBERG, Esq.,
Collector, Philadelphia.

SIR: Your letter of the 11th instant respecting the Marine Hospital was laid before the President of the

United States, who approves the regulations you propose for the reduction of the expenses of that establishment to a level with the receipts of the fund. He adds that no civil magistrate can dictate to the United States who shall be the object of their charity.

I am very respectfully, Sir,

Your obedient servant,

ALBERT GALLATIN.

A letter to the same Collector, under date of February 28, 1807, informs him that "manias and chronic" cases should not be cared for at the expense of the fund.

The Legislative Council and House of Representatives of Mississippi Territory memorialized Congress to provide for the erection of a marine hospital at Natchez; and the committee to whom it was referred, through its chairman, Hon. Thomas Randolph, March 26, 1806, reported favorably on the memorial, and recommended that twenty-four sections (15,360 acres) of land be granted the hospital establishment of Natchez, to be located by the Governor of the Territory. ("American State Papers," vol. vii., p. 66.)

On April 15, 1807, Dr. William Barnwell having absented himself from the hospital at New Orleans without leave, Dr. Blanquet was appointed to fill the temporary vacancy. On May 3, 1807, the east wing of the hospital at Norfolk was destroyed by fire.

The following letter from General Lincoln is characteristic of his extreme caution in contracting expenditures. The record shows the authorization asked for to have been granted:

BOSTON, June 26, 1807.

The keeper of the Marine Hospital informs me that the cellar at the west end of the Hospital is a place where he deposits his wood; the ground is very springy, and at times very muddy, and dangerous for the invalids to enter for wood; he wishes a floor might be laid to prevent the evils experienced, which will cost about one hundred dollars. I do not think myself authorized to do the business. I shall want your directions before I enter upon it.

I have the honor to be, most respectfully,

Your obedient servant,

BENJAMIN LINCOLN.

ALBERT GALLATIN, Esq.,

Secretary of the Treasury.

The following letter shows the contract system at Baltimore to have been far from satisfactory, even at that date. The Dr. Watkins referred to was Dr. Tobias Watkins, afterward Assistant Surgeon-General of the Army, 1818-'21:

TREASURY DEPARTMENT, }
May 10, 1808. }

JAMES H. MCCOLLOCH, Esq.,

Collector, Baltimore.

SIR: Your letter of the 29th ulto. has been duly received. You are authorized to make the necessary arrangements for the support of sick seamen for one year from the expiration of the contract with Dr. Watkins. From the stipulation made with him by the former Collector, I am inclined to the opinion that he has an equitable claim for another year's contract; provided that his terms be as low as those offered by others, and provided, above all, that there may be a reliance on equally good attendance on the sick. I leave, however, the subject wholly to your discretion, only observing that the complaint made against Dr. Watkins relates to the locality of the house used by

him as an hospital, and which is stated to be in the vicinity of ale-houses or dram-shops, to which the seamen are improperly permitted (as it is said) to have access. . . .

ALBERT GALLATIN.

Dr. Charles Jarvis, the physician to the hospital at Charlestown, died November 15, 1807. From the "Independent Chronicle," Boston, of the next day, which publishes a somewhat lengthy obituary, it is seen that he died at the comparatively early age of fifty-nine, universally respected by his contemporaries as a man of worth and spotless character. He was succeeded by the appointment of Dr. Benjamin Waterhouse. Then as now, when an officer is first assigned to a new station, improvements and changes were apt to follow, as the following letter from Collector Lincoln to Secretary Gallatin will indicate:

BOSTON, June 16, 1808.

N. B.—The physician of the hospital reports to me that he is in want of a building, I think about twenty five feet square, two stories high, as a barn, in which he can place his hay and straw, and a place in which he can stow away old bunks. Besides, he wants one small room wherein he can cleanse the people who are lousy, and who have the itch, etc.

BENJAMIN LINCOLN.

The Secretary of the Treasury in 1809 recommended an additional appropriation to meet the expenses of the service, as the dues collected were entirely inadequate. Much difficulty was experienced in keeping paupers from being furnished relief at the expense of the fund, owing to the general want of money. The Town Council of Providence, R. I., having made a claim against the Department for the services of a physician, medicines, and subsistence furnished sailors, the Secretary denied the claim, but authorized the Collector to employ a physician at an annual salary of \$200. From the report of Secretary Gallatin made at this time we learn that physicians were employed under contract at Newport, New London, and Baltimore—the only marine hospitals in operation at this period being at Boston and Norfolk. Several insane seamen were under continuous treatment, and the sick were furnished hospital relief in the town almshouses at Portsmouth, N. H., Portland, Me., Newport, R. I., and Alexandria, Va. At New York, Philadelphia, and New Orleans, seamen were sent to local hospitals. The following extract from a letter from Secretary Gallatin to General Dearborn, then Collector at Boston, defines the status of the physicians:

April 19, 1809.

. . . . No Directors of the Marine Hospital have been appointed by the President, nor that part of the law ever carried into effect. The whole is still considered as being on the original footing of affording temporary relief to the seamen, and the whole is under your exclusive superintendence, subject only to such general instructions respecting the annual expenses as have been transmitted from this Department. The President has reserved to himself the appointment of the Physician, but all the other officers or servants of the institution are considered as appointed by you. The Physician is only Physician and not director. You are also authorized to prescribe every necessary rule

for admission as well as for the government of the house; and with you rests the admission or rejection of charges in their amount, and therefore the regulation of the expenses and the checking of abuses. I presume that in practice it will always be found eligible to give to the Physician such share of the control over the house, its subordinate affairs, and other details, as will secure obedience to his directions and is the usage in other hospitals. But I am apt to think that General Lincoln delegated more than was necessary to the attending Physician. If so, it is in your power to correct the evils whenever you please.

I am, respectfully,

Your obedient servant,

ALBERT GALLATIN.

Shortly after this letter was written, Dr. Benjamin Waterhouse was removed on account of certain irregularities in his accounts, and Dr. David Townsend appointed physician to the marine hospital at Charlestown, which office he retained for a period of twenty years.

In the year 1811 a committee was appointed in the House to consider the propriety of creating a separate hospital establishment for the sick among the officers, seamen, and marines of the navy; and the Secretary of the Navy (Paul Hamilton), in a report dated February 22, 1811, stated that, although the sum of \$55,649.29 had been paid into the Treasury on account of hospital money since the enactment of the law, yet "no navy officer, and but very few seamen, had received any benefit from it"; that, among the few seamen sent to the hospitals, "three out of five deserted as soon as they got in a convalescent state." He recommended that the sum collected from the navy be separated from that collected from the merchant service, and stated that if this were made law, "six capacious hospitals would soon be established, in which all the sick of the navy might be comfortably nursed; all the wives of seamen killed in action might be supported; all the children supported and educated; and young men just entering the service as midshipmen might acquire the invaluable knowledge of the theory of navigation, lunar observations, and naval tactics, without costing the public a single cent." He also recommended that the balances due to deserters and deceased seamen, and mulcts of pay by sentences of courts-martial and stoppages of grog, be credited to the naval hospital fund; and that the subordinate officers of the hospital be appointed "from among those disabled seamen in the service who would gladly serve without any addition to their pensions, excepting merely their board, the cost of which to the establishment would be very inconsiderable." The commandants of the navy-yards he recommended to be governors of the hospitals, the wives of seamen killed in battle to be nurses, attendants, and laundresses, and their children, together with the pensioners and convalescents, to work in the gardens; the person in charge of the hospital to be acquainted with navigation, and act as teacher to the children and midshipmen; the latter class to have \$10 per month deducted from their pay while studying navigation.

This report, which is more remarkable for its spirit of philanthropy than for anything else, was, we are assured by Surgeon William P. C. Barton, entirely due to the data furnished the Secretary by himself, and was chiefly "written during a tempestuous voyage from Norfolk to New York in the sloop of war *Hornet*, then commanded by Captain Lawrence." (Barton, "Plans for Marine Hospitals," Philadelphia, 1814, p. x.) The idea of schools was evidently borrowed from the Greenwich Hospital, and the asylum plan from the Chelsea Hospital (England) for the support of aged and decrepit pensioners. On the receipt of this report, a law was passed (February 26, 1811) creating the naval hospital establishment, and separating the naval fund, which was to be disbursed under the direction of the Secretaries of the Treasury, Navy, and War, who were appointed commissioners for naval hospitals.

During the war with Great Britain, the hospitals at Boston and Norfolk were crowded to their utmost capacity. The records of the former are still extant, and show that large numbers were admitted from returned ships affected with inveterate scurvy. The prisoners from the captured British frigate *Guerriere*, and the exchanged men of the *Chesapeake* returned from captivity, were treated at that hospital. The following table shows by years the number of American seamen registered as having received "protections" from 1796 to 1812:

YEARS.	Number.	YEARS.	Number.
1796.....	4,849	1805.....	10,722
1797.....	9,021	1806.....	9,900
1798.....	7,061	1807.....	7,937
1799.....	6,514	1808.....	1,121
1800.....	3,390	1809.....	9,170
1801.....	6,911	1810.....	3,663
1802.....	891	1811.....	4,328
1803.....	10,724	1812.....	8,252
1804.....	6,822		

No naval hospital having been built, a resolution of inquiry was adopted by the House of Representatives, December 22, 1817; and, in reply thereto, the Secretary of the Navy (B. W. Crowninshield) reported on January 15, 1818, that the commissioners "met in the early part of the year 1812 and had surveys made of several sites in Washington City, but that the subsequent events of the war stopped all further proceedings, until after the peace." He also presented the report of the commissioners, W. H. Crawford, J. C. Calhoun, and B. W. Crowninshield, dated January 14, 1818, which advocated the repeal of the separation act.

On February 28, 1818, part of the marine hospital at Boston was destroyed by fire, the southwest wing and part of the center or main building being burned from basement to roof. The cause was reported officially to have been a defective chimney. In this year Secretary Crawford recommended an addition of 100 per cent. to the fund. A controversy arose be-

* "American State Papers," Class IV., "Commerce and Navigation," vol. ii.

tween the Collector of Customs at New York and the Governors of the New York Hospital, relative to the class of sailors for whose treatment payment should be made; and the latter, taking exception to the ruling of the Collector, memorialized Congress. In the memorial it is stated that the Collector limited the number of sailors to be paid for at any one time to seventy-five, on account of the inadequacy of the fund to meet the demands upon it; and the memorialists pertinently inquire "whether it is consistent with justice or humanity that such numbers of distressed seamen, who have all contributed equally to the fund, should be abandoned to want and misery." They suggest an addition of ten cents a month to the hospital tax as both reasonable and necessary. The claim of the memorialists was rejected by the House, upon an adverse report of Secretary Crawford. The records show that the claim had been pending more than four years.

Much difficulty was experienced by the Collectors in convincing the different hospitals that seamen discharged from the navy were not entitled to relief from the marine hospital fund; but the matter was authoritatively settled in a letter of Secretary Crawford dated August 20, 1821. On January 14, 1822, a memorial was presented to the House of Representatives from the Chamber of Commerce of New York, protesting against the ruling of the Department that "only *sixty* men should be paid for at any one time in the New York Hospital"; that "no relief should be extended to insane seamen, or those suffering from chronic affections"; and that "no patient should be paid for, for a longer period than four months." The memorialists state that much suffering results from carrying out the rules; that the sick sailors, "having no domicile in the city, are not entitled to admission into the almshouse, and must therefore perish unless relieved by the hand of charity." They recommend an increase of the tax to thirty cents per month. On January 28th a memorial was received from the seamen of the port of New York, protesting against the rules vigorously, and also recommending an increase of the dues tax to thirty cents per month. Secretary Crawford reported to Congress that "for three years past I have urged the propriety of doubling the fund. My importunity has been without effect. The state of the Treasury forbids the expectation that inattention to the excessive expenditure of money for the relief of sick and disabled seamen will be considered excusable by those who hold the purse-strings of the nation." The Secretary acknowledges that "maniacs and incurably diseased persons" were discharged, as they were fit subjects for the operation of the poor-laws of the States of which they were citizens or inhabitants. "Had they been retained, the whole fund would in a short time have been expended on maniacs and incurables, instead of being applied to those whose usefulness

might be restored by such application." Notwithstanding these memorials, and the declaration of the Secretary, Congress took no further action in the matter.

Mr. Holmes of Mississippi presented in the Senate, April 26, 1822, a letter from Dr. A. Perlee in relation to the hospital at Natchez, by which it appears that the Legislature of Mississippi had laid a tonnage tax on boats for the support of that hospital, which had been unoccupied from 1819 until August, 1821, when it was again opened. The funds, however, were inadequate for its support, and it was again closed in February, 1822.

It having been decided by the Treasury Department to erect a new hospital at Boston, the Collector was, on December 29, 1824, instructed to turn over the marine hospital, which was in the navy-yard, to the commandant, and a building was rented in Charlestown for the reception of the sailors of the merchant marine. Dr. David Townsend, in reply to a letter of the Collector, recommended Charlestown as a site for a new hospital; the steward, Colonel Charles Turner, recommended Chelsea; and the venerable Dr. Thomas Welsh recommended Dorchester Heights. Some difficulty was experienced in procuring the usual authority from the Massachusetts Legislature, relinquishing jurisdiction over the reservation, as the following letters show:

20th June, 1825.

DEAR SIR: You will be surprised to find that the bill for liberty to the U. S. to purchase a site for a marine hospital did not pass the Legislature.

The fact is, it passed the Senate the first of any bills which were there considered, and was sent to the House, and on the last day but one of the session came back with an amendment providing for a conditional session only; that is, that certain novel regulations concerning voters living on the premises and paupers which might be carried there should be added. These the Senate disagreed to; the House insisted; a conference was ordered, but failed by limitation of time. The project of the House was instituted by Judge Dana, who alone can explain why he chose to interfere in the strange manner which has caused the loss of the bill.

Yours truly, J. T. AUSTIN.
General DEARBORN, Collector.

9th February, 1826.

DR. SIR: I have heretofore informed you that Mr. Dana caused the H. of R. to put a rider on the Hospital bill, and that Mr. King and myself are unable to get it changed. Now, if you or Col. Turner after inspecting this bill are willing to accept it, I will have it passed immediately. If you think as I do, that the U. S. ought to have a better bill, the only thing to be done is to wait until the next session. As soon as you give me the result of your judgement on such examination, I will see it carried into effect.

Very truly, J. T. AUSTIN.

On March 6, 1826, the citizens of Charleston, S. C., presented a memorial setting forth that "some time in the year 1804 they entered into a contract with the then Secretary of the Treasury, Mr. Gallatin, to relieve the United States from the charge of the marine hospital at Charleston, stipulating that \$15,000 should be appropriated by the United States for building

the hospital, and that the hospital money collected in the port should be paid to them to defray the expenses of the establishment, . . . and to make up the deficiency a tonnage duty should be imposed by the State Legislature, to which the assent of Congress should be asked and granted, not to exceed ten cents per ton." But the memorialists affirmed that they had not had the benefit of the contract; the lot was paid for by the Secretary, but no building erected; and they further stated that they had expended since 1804 \$50,000 more than they received. They therefore asked that they be released from the contract, or that an appropriation be made for \$15,000, with interest thereon from 1804 to the date of the petition, for the erection of a marine hospital. The site procured was purchased November 14, 1816, of Mrs. Drayton of Hempstead, for \$5,500. The committee to whom the petition was referred reported favorably upon this claim, and a bill was introduced authorizing the erection of a hospital; but the act was not finally passed until May 20, 1830.

The report of Secretary Richard Rush, January 29, 1827, shows his adherence to the rules laid down by his predecessor, but he made no recommendations. The new Boston marine hospital was finally located at Chelsea in 1827, and ten acres of ground were purchased of Dr. Shurtleff. The building was finished in October, 1827, at a cost of \$25,000. It was a rough stone building, 150 by 50 feet, two stories above the basement, with wings for physician's and steward's quarters. Like the majority of the buildings constructed at that time, no provision was made for ventilation except at the doors and windows, and it had no bath-room. Dr. David Townsend, whose appointment in 1809 as physician to the Charlestown hospital we have noticed, died in April, 1829, and was succeeded by Dr. Charles H. Stedman. Dr. Townsend was born in 1753, had seen extensive service in the Revolutionary army, in which he served continuously from the commencement of the war, and always with distinction, and at the time of his death had spent fifty-five consecutive years in the active practice of his profession. In his declining years, his son, Dr. Solomon D. Townsend, who had served in the navy during the war of 1812, was on duty with him as assistant surgeon.

In a report to Congress made February 27, 1830, by Secretary S. D. Ingham, it is stated that no tax had been collected from seamen in the lake-ports up to that time, but that instructions had been given to insure its collection from that time forward.

On June 8, 1834, Mr. Harper, chairman of the Committee on Commerce, reported a bill for the establishment of a marine hospital at Portland, Me., but action was postponed. On January 18, 1836, a memorial was presented from the physicians of Portland, warmly urging the passage of the bill for the erection of a marine hospital, and they state that the ac-

commodation then provided for the use of seamen at that place was "in connection with the almshouse, infirmary, and house of correction."

On February 13, 1836, Secretary Levi Woodbury reported to Congress the inadequacy of the hospital fund to meet the necessities of the helpless and improvident class for whose benefit the law was designed. There were at this time only three marine hospitals, viz., Chelsea, Norfolk, and Charleston, S. C. The last was managed under a contract with the city authorities, and the general condition of the service was far from satisfactory; it could scarcely be otherwise when so large a proportion of the beneficiaries of the fund were furnished accommodations in the almshouses, to which they might have been admitted without any payment of dues whatever.

An editorial in the Boston "Medical and Surgical Journal," July 20, 1836, speaks of the hospital dues of twenty cents per month as "disgraceful to the Government of the United States," and says that "even in this unrighteous, oppressive mode of sustaining marine hospitals there are not half enough of them." The same writer also says of the new marine hospital at Chelsea, that it is "a libel on modern architecture; six wards are obviously required where there is but one"; and says the medical officer should be given a house by himself; that he is "boxed up in one end of the hospital; his family must not only be annoyed, but the patients are under restraints to which they ought not to be subjected." It also suggests constructing extensive piazzas "entirely round the building," and protests against the low compensation of the surgeon. Nevertheless, it strongly recommends students to avail themselves of the privileges of the institution. The Secretary of the Treasury recognized the crying evils of the service, and reports, in answer to a Senate resolution, a recommendation for a hospital at Holmes's Hole, Mass. He recommends that the customs officers be made by law the directors of the hospital.

On April 1, 1836, a resolution was received in the House of Representatives which had been passed by the General Assembly of the State of Ohio, February 26, 1835, "That the establishment of Western commercial hospitals be recommended to the favorable consideration of Congress; and that his Excellency the Governor be requested to forward a copy of the report of the Medical Convention of Ohio upon that subject, together with this resolution, to each of our Senators and Representatives in Congress." The report transmitted was written by Dr. Drake of Cincinnati, and gave the credit for the origination of the movement to Dr. Cornelius Campbell of St. Louis. The number of steamboats engaged in the navigation of the Mississippi River was estimated at 250, and the number of flatboats at 6,000; the number of steamboats on the lakes at 35;

schooners, sloops, and brigs on the same waters at 250; and the total number of employees on the various classes of these vessels at 43,000. The report alludes to the frequency of steam-boat explosions, and states that many lives have been lost for the want of timely aid. The report indicates, as places in need of hospitals, New Orleans, Natchez, Memphis, St. Louis, Louisville, Cincinnati, Pittsburgh, Buffalo, Cleveland, and Detroit, and "some point near the mouth of the Arkansas, Trinity, or a spot near the junction of the Ohio and Mississippi; Evansville, and Parkersburg or Guyandotte." This report was extensively circulated among the various State and national officials, and it is noticeable that hospitals were subsequently built at all the above points, with three exceptions only. An act was passed March 3, 1837, appropriating \$70,000 for the erection of a marine hospital at New Orleans; \$15,000 for three sites upon the Mississippi and one on Lake Erie, in the selection of which the President was authorized to detail three medical officers of the army; and \$10,000 for the erection of a hospital at Mobile; and from the first day of April following, the laws whereby twenty cents per month were deducted from the wages of seamen were suspended for one year, and the sum of \$150,000 was appropriated for their benefit. The Secretary of War detailed for this duty Surgeon B. F. Harney, Assistant Surgeons H. F. Heiskell and John M. Cuyler (of whom only the last named is now living). The Board assembled at Baton Rouge, La., June 18th, and received instructions from Surgeon-General Thomas Lawson, authorizing them to select and purchase sites for the marine hospitals on the shores of the Western waters, and to execute contracts for deeds subject to the approval of the Secretary of War. On November 30, 1837, architect Robert Mills submitted his plans for the new marine hospitals to the Secretary of War, and they were transmitted to Congress. The plans, although superior to those on which the hospitals had previously been constructed, were still very defective in the essential particulars of drainage and ventilation. (They may be seen in print in H. R. Ex. Doc. No. 3, Twenty-fifth Congress, second session.)

On January 12, 1838, Mr. Smith of Maine, chairman of the Committee on Commerce, speaks of the prevailing distress among sailors owing to the inadequate fund; he cites the reports of several collectors, calls attention to the report of the Army Medical Board, and opposes extending the benefits of the fund to "farmers," but favors extending the tax and the benefits to fishermen.

The Senate passed a resolution, March 2, 1839, directing the Secretary of the Treasury to "report to the Senate at the next session of Congress whether any change in the system of marine hospitals is expedient, and if so, what; especially if any new hospitals are necessary, and in what manner they ought to be erected,

if deemed expedient, and how supported." The Hon. Levi Woodbury, in answer to this resolution, reported December 19, 1839. In this report he recommends a "change in the system," and gives his reasons. He states that the fund is inadequate to meet all ordinary demands upon it, and that a large class of seamen, not contributors to the fund, are debarred, and occasionally subjected to severe suffering from a want of "change in the system." He suggests that the tax be extended to all seafaring people, and to extend assistance to many cases of a chronic character. He also recommends that hospitals, "besides those now erecting at Mobile and New Orleans," should be built, one at Detroit or Buffalo, and another at Louisville or Cincinnati. He thereupon refers to the report of an Army Medical Board detailed to select sites for marine hospitals upon the Western waters. The Board recommended the construction of hospitals at Cleveland, Wheeling, Louisville, Paducah, Napoleon, Natchez, and St. Louis. The inhabitants of Pittsburgh being desirous that the hospital on the upper Ohio should be at their city instead of Wheeling, a second Board was appointed, composed of Surgeons Mower and Heiskell and Assistant Surgeon Day. This Board reported in favor of the Pittsburgh site, and Congress was compelled to give attention to a running fire of memorials for a period of several months from the advocates of the rival claims of the two cities.

The report of the Hon. William Wilkins, Secretary of War, in answer to a House resolution at the session of 1844-45, stated that titles had been perfected for three sites, viz., Cleveland, Pittsburgh, and Louisville. He doubted that titles could be perfected at Paducah, Napoleon, and Natchez, and stated that the site at St. Louis "can not now be obtained." He inclosed plans and estimates for hospitals, but thought that the plans might be improved, and the estimates reduced fifty per cent. Accompanying this report was a report from Surgeon-General Thomas Lawson, which stated that deeds subject to the approval of the Secretary of War were executed by the proprietors of the hospital sites, and that appropriations had been asked for, but that five years had elapsed before these appropriations were made. (See act of August 29, 1842.) In consequence of this delay the vendor at St. Louis canceled the deed, and otherwise disposed of the property. Sites were actually paid for at Louisville, Pittsburgh, and Cleveland; but no money having been appropriated for the construction of these hospitals, no progress had been made toward erecting them.

The following resolutions were passed by the Legislature of the State of Ohio, in relation to the erection of the Cleveland hospital:

Whereas, In the fall of 1837 the Board of Army Engineers, under the authority of the United States, located at Cleveland, in this State, the site of a marine hospital, and no appropriation has as yet been made

by Congress for the erection and organization thereof; and whereas there is no such institution on the whole extent of the lakes, navigated by more than 400 steamboats and other vessels, and in the navigation of which there are employed more than 4,000 men; and the necessity of a hospital for the reception of sick and disabled seamen is urgent, and, in the opinion of this General Assembly, such as demands the immediate attention of Congress; therefore,

Resolved by the General Assembly of the State of Ohio, That our Senators in Congress be instructed, and our Representatives requested, to use their exertions to procure an appropriation by that body, at its present session, of such sum as shall be needful for the erection and efficient organization of such hospital in the said city of Cleveland.

Resolved, That the Governor be requested to forward a copy of the foregoing preamble and resolution, to each of our Senators and Representatives in Congress.

RUFUS P. SPAULDING,
Speaker of the House of Representatives.
JAMES J. FARAN,
Speaker of the Senate.

January 27, 1842.

An amusing example of circumlocution occurred in relation to the hospital at Ocracoke, N. C. The act establishing it was approved August 29, 1842. The site for the location was selected in January, 1843; the purchase was sanctioned by the Secretary of the Treasury in April, 1844; the title was examined and made good by the Attorney-General in May, 1844; and in January, 1845, the Department was officially advised of the transfer of the title to the United States by the State of North Carolina. The proposals for the building were received in March, 1845; and the Department attended to the subject May 7, 1845, and referred the papers to the Collector of Customs at Ocracoke. The Collector expressed his dissatisfaction with the previous proceedings, and recommended that the proposals to construct the building should be renewed; and the Hon. R. J. Walker reported to the House that the building would be completed in September, 1845, at a cost of \$5,497.

An act was passed March 1, 1843, extending the provisions and penalties of the act of July 16, 1793, to the masters, owners, and seamen of registered vessels employed in the carrying and the coasting trade, and authorizing the issue of such instructions from the Secretary of the Treasury as would insure the collection of the hospital money. This was simply a re-enactment, the section of the original act including coasting vessels having been suspended by construction since the year 1831.

Secretary of the Treasury John C. Spencer states in a communication to Congress that the act of March 1, 1843, extended the tax to owners of vessels, and he asks that the tax be still further extended, and that monthly or yearly assessments be made in proportion to the tonnage of the vessel.

On February 21, 1843, the General Assembly of Indiana passed a resolution setting forth the necessity of a system of marine hospitals for boatmen, and approving the plan adopted in 1837; but the resolution expressed the opinion that such hospitals should be placed upon a

footing separate and distinct from the general marine hospital system of the United States, and their Senators and Representatives in Congress were instructed to use their exertions to obtain an appropriation sufficient to carry out "these views."

The Committee on Commerce, April 2, 1844, reported favorably upon the establishment of a hospital at Key West, Florida, and asked practically that it should be used as a quarantine. Accompanying this report was a presentment of the grand jury of the city of Key West, county of Monroe and Dade, soliciting aid from the General Government on account of yellow-fever cases treated by the city among the sailors. A letter from Dr. James Davis to the Collector of the port sets forth the smallness of his compensation: \$3 per week for board and nursing, and 37½ cents for medical attendance, and the last for twenty-five days only.

A bill was introduced by Mr. John P. Kennedy, of the Committee on Commerce, in 1844, making appropriations for the erection of marine hospitals on the Western waters, and to provide for the purchase of a site at the city of Baltimore. In 1848 a petition was presented in the House praying the sale of the marine hospital and grounds in Chelsea, in order that the lands might be given up to the city for taxation.

In compliance with an act of Congress passed March 3, 1849, Dr. Thomas O. Edwards of Lancaster, Ohio, and Dr. George B. Loring of the marine hospital at Chelsea, made a report, October 1, 1849, in relation to marine hospitals and the marine hospital fund. These gentlemen made an inspection of the hospitals then in operation and in process of construction. The report recites the various enactments of Congress in relation to the service, and then proceeds to speak of the several hospitals. The commissioners state that the "condition, internal arrangement, and expense of the hospitals already in operation vary with their number and location," and "neither in form nor in character has any uniformity in their arrangement been observed." They also state that "it is impossible at this date to give in general detail any sketch of a system that could be understood as being applicable to the hospitals collectively; but both in the mode of construction, and in all after-management, each district presents its own individual picture." They then proceed to the consideration of individual hospitals, and recommend that the hospital grounds and building at Chelsea be sold, and a part of the naval tract purchased, and a new building, adequate to the needs of the service, be built thereon. They speak in highly eulogistic terms of the hospital at Norfolk and its able management. They recommend the discontinuance of the hospital at Ocracoke, and erecting one instead at Wilmington. At the latter place they speak of the great necessity for a hospital, and recommend that a building already erected at the private expense of a few

Individuals, at a cost of \$4,000, be purchased by the Government. They make favorable mention of the Charleston hospital, then operated under a contract with the city authorities. At Mobile, they state that they could not find the surgeon of the institution; that "he pursues his own private business in the circuit of the city, and an assistant represents him for months in the wards of his hospital." The name of the surgeon is not stated. They consider it questionable whether a hospital is necessary at Paducah, and think that one hospital above New Orleans, at Natchez, with the one at St. Louis, will be sufficient. The one at Napoleon, they are of the opinion, would be of no use. They speak favorably of the marine hospital at Louisville, then near its completion, also of the hospital at Pittsburgh; and they recommend hospitals at Detroit, Buffalo, Cincinnati, and at one or more ports in Maine. They favor a tonnage duty on all vessels, including fishing vessels. In conclusion, they speak of the tedious way in which the hospitals have been constructed. They review the various regulations that have been issued from time to time, and say that the greatest defect which exists "is that no method of government and internal regulation has been entered upon which would render them parts of a uniform whole"; and they propose to place the hospitals under the control of a "chief surgeon, who shall have his bureau attached to the Treasury Department." The "regulations which are to govern the hospitals should emanate from him." The surgeons employed in the several hospitals should be responsible to him for the proper management of the institutions.

On January 25, 1849, a resolution of the House directed the Secretary of the Treasury to "inquire and ascertain the most favorable terms on which suitable sites can be obtained for marine hospitals at Buffalo, Oswego, Galveston, Detroit, Wilmington, N. C., Newport, R. I., Erie, Pa., and Appalachicola; and that he report the same, with his opinion upon the expediency of erecting hospitals at those places, to Congress at the next session." The Secretary (W. M. Meredith) reported, March 20, 1850, that, "looking only to the comforts and advantages of hospital treatment and accommodation over the existing system of relief at places indicated in the resolution, public hospitals would undoubtedly be desirable in them all. But judging of the wants and claims of other districts, and the insufficiency of the fund for their maintenance, and the consequent dependence of the fund on appropriations to be made by Congress, . . . I can not recommend so large an addition at one time, nor indeed any addition." The reports of the various collectors are transmitted, all warmly recommending the establishment of hospitals at their respective ports.

In a report to Congress for 1850, the Hon. Thomas Corwin, Secretary of the Treasury, states that "means have been taken for the

conversion of a building at San Francisco, known as the Presidio, into a hospital, to be used until a suitable structure shall be erected for that purpose." No action having been taken by Congress to secure uniformity in the marine hospitals, or to provide for a medical corps, as recommended in the Edwards-Loring report, we are not surprised that the Secretary, becoming disgusted with their management, prefers a return to the "farming-out" method as the lesser of the two evils. The Secretary (Thomas Corwin), in a report dated June 30, 1852, says he does not "advise the erection of more marine hospitals. The experience of the Department induces me to believe that it is in every way preferable to make an arrangement for the care of sick seamen with local hospitals of high standing, which are under the immediate and vigilant supervision of citizens of the highest respectability at the respective places." He also states that "there is probably no instance where so much relief is granted, and so generally distributed, and with so much advantage to the parties, as that by the marine hospital fund under the present regulations." In conclusion, he requests an additional appropriation for the Evansville hospital. Much difficulty was experienced in procuring a site for the marine hospital at San Francisco; and a contract having been made with Charles Homer to construct the hospital, he was kept waiting for a period of thirteen months before he could begin upon his work. Mr. Homer claimed damages to the extent of \$45,182.47, which Congress declined to allow.

The hospital at Chelsea having been in use nearly thirty years, and the land in its vicinity having become valuable, the Secretary of the Treasury (James Guthrie) recommended (December 17, 1854) that the ground be parceled into lots and sold, and that the proceeds be devoted to the construction of a new hospital. He also recommended that ten acres of the navy-hospital grounds be appropriated for the site of the new building.

Whatever may have been alleged against Secretary Cobb, he at least exercised a watchful care against unnecessary expenditures in the marine hospitals, and showed great severity in his rulings. Indeed, he desired the abolition of the entire system, as shown in his report of June 30, 1858, which states that small necessity existed for the many appropriations that had been made for costly marine hospitals, and at the same time showed the "glaring discrepancy between the amount appropriated and the necessities of the case." Thus, "At Natchez, Miss., where a marine hospital had been erected at a cost of \$53,250, there have been no returns of patients admitted during the past year. At Portland, Me., a building has been constructed costing over \$100,000, and it is estimated it will cost over \$4,000 to finish it. The returns for the past year are for only 61 patients relieved, at an average cost of

three dollars per week, and a total cost of \$4,377.43. At Pensacola but 17 patients have been reported to be relieved, at an average cost of \$3.50 per week, and a total of \$156. . . . There is a necessity for a different system of legislation for such objects."

In this report a comparison is made between the cost of maintaining the patients under the contract system and in regular marine hospitals, as follows: "*Cost by contract*, each man, per week: Bridgeton, N. J., \$1.50; Cincinnati, \$5; New York, \$4; Portsmouth, \$2; Middletown, \$2; and at Machias, Waldoboro, Kennebunk, Belfast, Presque Isle, and Sackett's Harbor, each \$2.50. *Cost in marine hospitals*, each man, per week: Cleveland, \$4.84; Norfolk, \$5.09; Chicago, \$5.77; Chelsea, \$6.11; New Orleans, \$6.31; San Francisco, \$6.62; Louisville, \$7.21; Mobile, \$8.19; Key West, \$8.47; Pittsburgh, \$10.71; Paducah, \$16.10; Ocracoke, \$18.20; Napoleon, \$25.41; Natchez, \$70.70." This comparison, besides giving only partial data, was obviously unfair, as those hospitals showing the highest average cost were altogether unnecessary, as is shown by Mr. Cobb himself. He states of the Burlington marine hospital, that there was small necessity for it in the first place. It was originally built at a cost of \$39,111.27, which the Collector of that port characterizes as a useless and extravagant expenditure. He estimates \$250 per annum as a reasonable estimate for future disbursements; and even this estimate has proved excessive, as the report for the fiscal year 1873 showed an expenditure of \$147.25; for 1874, \$104.41; and for 1875, \$129.28. The great advantage of regular hospitals over those conducted by contract could not be seen when there was but a single hospital with a resident surgeon, when the hospitals were never inspected except at long intervals, when there was but little if any accountability on the part of the persons having them in charge, and when there were no statistics showing the duration of treatment. Whenever seamen are cared for at a per-diem rate, and their discharge from hospital not under control, the duration of treatment will be great, and the expense necessarily large.

At the breaking out of the war of secession, there were marine hospitals belonging to the United States at the following ports: Burlington, Vt.; Burlington, Iowa; Chelsea, Mass.; Cincinnati, Ohio; Charleston, S. C.; Chicago, Ill.; Cleveland, Ohio; Detroit, Mich.; Evansville, Ind.; Galena, Ill.; Key West, Fla.; Louisville, Ky.; Mobile, Ala.; Natchez, Miss.; Napoleon, Ark.; Norfolk, Va.; Ocracoke, N. C.; Paducah, Ky.; Pittsburgh, Pa.; Portland, Me.; St. Louis, Mo.; St. Marks, Fla.; San Francisco, Cal.; and Wilmington, N. C. All of these in the seceded States, with the exception of those at St. Marks and Key West, were taken possession of by the Confederate forces, and held until reoccupied by the national authorities.

On March 1, 1862, Congress, in appropriating \$200,000 for the marine hospital fund, authorized the Secretary of the Treasury to rent either of the several marine hospitals to the proper authorities of the cities or towns where they were located, and to contract with the authorities for the relief of the sick and disabled seamen; and further authorized the Secretary to sell the hospital at Burlington, Iowa, or to retain the title and use it for the relief of sick and wounded soldiers of the United States, or to discharge all the officers and servants of the Government connected with it, and to close the hospital, should he deem it more expedient.

Owing to the damages inflicted on American shipping during the war, many American vessels were transferred and sold abroad. This affected the receipts from the marine hospital tax to a considerable extent. In order to guard against this loss, it was enacted by Congress, April 29, 1864, that, in case of the sale or transfer of any vessel of the United States in a foreign port, the consul or other agent of the United States should collect from the master or owner of the vessel all hospital money that had become due at the time of the sale; and, in default of payment of such dues, the sale or transfer of the vessel was declared void.

On June 20, 1864, the Secretary was authorized to sell the marine hospital and grounds at Chicago, and purchase a site and erect a new hospital at that place. The report of the Supervising Architect for 1864 recommends that Congress be asked for authority to sell the marine hospital property at Burlington, Vt., "as there never was any demand for a hospital at that point." The hospitals at Cincinnati, Burlington, Vt., and Charleston, S. C., were sold by public auction during the year 1866. Attempts were also made to dispose of the marine hospital at Ocracoke, N. C., and Napoleon, Ark., but without success, the prices offered having been merely nominal. The marine hospital at Cincinnati, which cost \$216,833, and which was completed in 1860, had been used during the war for the reception of wounded soldiers. Although it was nearly new, and in a most eligible situation, it was sold for \$70,500. The marine hospital at Charleston, S. C., which had been nearly destroyed during the siege of that city, was sold to the Commissioners for the relief of freedmen for \$9,500. Its original cost was \$49,235. During the year 1867 the hospitals at Burlington, Iowa, and Evansville, Ind., and the hospital grounds at Paducah, Ky. (the building having been destroyed by fire during the war), were sold. The marine hospital at St. Marks, Fla., was transferred to the War Department. The site for the new marine hospital at Chicago was purchased at a cost of \$10,000. The building now stands on the site then purchased, six miles from the custom-house, on a barren sand-bank, exposed to the violent winds which prevail in that region in winter. In 1868 the hospital at Napoleon,

Ark., was swept away by the river, which the Supervising Architect stated in his annual report for that year was the most favorable disposition that could have been suggested, as the property was entirely unsalable, and the building had never been needed for hospital purposes. Some of the materials of the building, however, were rescued and sold for \$30. In this year the hospital at San Francisco was partially destroyed by an earthquake.

The Supervising Architect, in his report to the Secretary for the year ending June 30, 1869, says: "So remarkable has been the selection hitherto of locations, that it is difficult to imagine any other motive for the erection of the buildings, in many cases, than a desire to expend money in the locality in which the buildings were located."

In this year Dr. W. D. Stewart, who had served during the war as a surgeon of volunteers, was appointed an Inspector of Marine Hospitals for the Treasury Department; and later Dr. Billings of the army was associated with him in this work, in which he subsequently succeeded him. In accordance with the report of these officers, the Secretary of the Treasury recommended the sale of the marine hospital building and grounds at New Orleans, and the purchase from the War Department of the Sedgwick Military Hospital. Mr. Mullett says of the hospital at New Orleans:

The plans were prepared in 1855 and 1856, and contemplated the erection of a brick structure; but parties interested in the iron trade were permitted to prepare plans for an iron building, which were adopted. During the progress of construction it was thought necessary that the iron walls should be backed with some non-conducting material, and a large amount of money was expended in backing them with unburned clay or adobe. The experiment proved a total failure, and it was finally decided to back the exterior of the walls with brick, as well as make the interior partition of the same material. This portion of the work was not completed. The roof is of galvanized iron, in bad condition, and practically worthless. . . . The building consists of a central structure 130 feet by 62, three stories high, with two wings, 183 by 63 feet, two stories high, the three being connected by verandas.

This building was occupied as a barracks during the war, and was temporarily transferred to the Freedmen's Bureau for a hospital in 1865. One wing is now occupied as a hospital for the pauper insane of Louisiana, by permission of the Department, it having never been used as a marine hospital.

The following letter from Mr. N. B. Devereaux, Chief of the Office of the Revenue, Marine Division, to the Hon. William B. Kelsey, of the Committee on Appropriations, shows the condition of the marine hospital fund on April 20, 1870:

The hospital expenses are about \$40,000 per month, say the sum in a year of \$475,000; to meet which we have a revenue from seamen of \$175,000, leaving a deficit of \$300,000. We had an appropriation last session of \$100,000, leaving the sum of \$200,000 to be met by another appropriation, which we now require to carry us through the present fiscal year ending June

30, 1870. We need at this moment \$120,000 to pay bills already due, and claims in office; and \$80,000 more will meet the expenses for the next two months, May and June. This is the exact state of the case.

In 1870 the Secretary of the Treasury reported, in answer to a resolution of the House, that the hospital at Mobile was going to ruin; that it would cost \$15,000 to \$20,000 to repair it; and he recommends discontinuing the hospital, and sending the patients to New Orleans.

In this year Secretary Boutwell renewed the recommendation which had been made in 1836 by the Hon. Levi Woodbury, then Secretary, for the establishment of a marine hospital at New York, as follows:

TREASURY DEPARTMENT, *January 17, 1870.*

SIR: The Department, regarding it highly essential that the port of New York should be provided with a marine hospital, has made a request of the War Department that the buildings on David's Island, East River, formerly an army hospital, but not now required, be purchased by the Treasury Department for marine hospital purposes. It is desired that David's Island be transferred to this Department, and the sanction of Congress is requested, together with an appropriation of \$10,000, to purchase the building at the appraised valuation of \$6,000, and the balance of \$4,000 to put the hospital in proper condition for service. The locality of David's Island is a very superior one for the purposes named, and the Department will be afforded an excellent opportunity of establishing a hospital at this great commercial point, for a moderate expenditure.

David's Island being twelve miles from the city, this recommendation was opposed by the shipping interests, and was never carried into effect.

In this year, January 31, 1870, a bill for the reorganization of the service was transmitted by Secretary Boutwell to the House. The essential changes proposed by this bill had been already foreshadowed in the Edwards-Loring report, heretofore alluded to. This bill for the first time provided for a systematic national service, and the regulations which were subsequently made in accordance with it provided for the examination of medical officers. Prior to the adoption of these regulations there was no limit to the number of employees that might be borne on the pay-rolls of the hospitals, and in many instances the number of attendants far exceeded that of patients. The act, approved June 29, 1870, provided in section 1 that the hospital dues should be increased to the sum of 40 cents per month. Sections 2, 3, 4, and 5 were simply reenactments of previous laws which had fallen into disuse from lack of enforcement. Section 6 authorized the Secretary of the Treasury to appoint a surgeon to act as Supervising Surgeon of the Marine Hospital Service, whose duty it was, under the direction of the Secretary, to supervise all matters connected with that service, and with the disbursement of the fund. It also provided that the word "vessel" should be held to include every description of water-craft, raft, vehicle, and contrivance used, or capable of being used, as a means or auxiliary on or by water. Dr. John M. Woodworth

of Illinois, who had served with distinction during the war, was appointed to the office of Supervising Surgeon, March 23, 1871.

By the act of June 10, 1872, Congress placed its disapprobation on the "contract system," by providing that no part of the sum then appropriated should be used for the support of seamen in contract hospitals.

The act of March 3, 1875, directed the Secretary of the Treasury to collect the tax by a schedule based on the difference in rig, tonnage, and kind of traffic; and by an act of the same date, the title of the "Supervising Surgeon" was changed to Supervising Surgeon-General, and the appointment was directed to be made by the President, by and with the advice and consent of the Senate.

The operations of the service since 1871 have been published in the reports for the years 1872, 1873, 1874, 1875, 1876-'77, and 1878-'79. The first board for the examination of medical officers was convened in accordance with the regulations of 1873, since which time no appointments have been made to the service except such as have passed a thorough and rigid examination into their professional qualifications. Since the reorganization of the service all useless hospitals have been discontinued; the hospitals at San Francisco and Chicago have been completed; a system of dispensary or out-patient relief has been inaugurated; and all medicines are purchased in bulk by the Medical Purveyor, who makes such purchases only after a thorough examination into their quality, and they are then distributed to the various hospitals.

The number of seamen in the United States contributing to this service is estimated at 170,000. The number of patients actually treated during the year ended June 30, 1879, was 20,922. The offices of the hospitals are, whenever practicable, at the custom-houses at the different ports, and seamen requiring prescriptions only, who are not sick enough to require being sent to hospital, are furnished medicines at these offices as "out-patients." Nearly 10,000 seamen were treated as out-patients in 1879. Ambulances are furnished at all the principal ports.

In June, 1879, the subject of physical examination of seamen, which had been agitated for several years by Dr. King of Staten Island, and Drs. Woodworth and Bailhache of the Marine Hospital Service, was taken up, and a circular was issued by the writer, with the approval of Secretary Sherman, which provided that on the application of the master, owner, or agent of any vessel of the United States the marine hospital surgeons were required to examine physically any person desiring to ship on board any such vessel, in order to determine his seaworthiness. Although the subject had been under discussion for some time, yet the idea that such examinations could be made popular without a compulsory law seems not to have occurred to any one pre-

viously; but the leading daily papers of the country republished the circular with general approbation. This has lately been extended by the action of the Board of Supervising Inspectors of the Steamboat Inspection Service, in adopting new pilot rules, which require that no pilot shall be allowed to take out a license until he shall produce a certificate of examination from a medical officer of the Marine Hospital Service that he suffers from no defect of vision.

In August, 1879, the hospital was opened on Bedloe's Island, New York Harbor, the military having evacuated it; and while this volume is in press (1880), a steam ambulance is being constructed, to ply between the Battery and the island, and elsewhere about the harbor, on receiving the proper signal from any American vessel in port.

The officers of this service consist of a Supervising Surgeon-General, Medical Purveyor, surgeons, passed assistant surgeons, and assistant surgeons. These are designated medical officers. At ports where the service is not large enough to warrant the assignment of a regular medical officer, a private physician is designated as acting assistant surgeon, to act instead of a medical officer. Dr. Woodworth, the first Supervising Surgeon-General, having died March 14, 1879, the writer, at that time a surgeon, was promoted to fill the vacancy.

It is gratifying to add that the growing importance of this service is meeting with the attention its object and character demand at the hands of Congress and commercial interests throughout the country.

JOHN B. HAMILTON,
Supervising Surgeon-General.

SHERMAN, JOHN, Secretary of the Treasury, born in Lancaster, Ohio, May 10, 1823. His paternal ancestors came from Essex, England, in the early days of the colonies, and settled in Massachusetts and Connecticut. His grandfather, Taylor Sherman, was born in Connecticut. An accomplished scholar and able jurist, he received a seat on the bench. He married Elizabeth Stoddard, a lineal descendant of Anthony Stoddard, who emigrated from England to Boston in 1639. Charles Robert, their son (the father of John Sherman), was born in Norwalk, studied law in the office of his father, and was admitted to the bar in 1810. The same year he married Mary Hoyt of Norwalk, and removed to Lancaster, Ohio. In 1823 he was elected Judge of the Supreme Court of that State. His written opinions, published in Hammond's "Reports of the Supreme Court of Ohio," have since been respected by the bar and courts of Ohio and other States as of the highest authority. He died suddenly, June 24, 1829, leaving a widow with eleven children. Her means being limited, friends came to her assistance, and took charge of the oldest children. Thomas Ewing, a neighbor and friend, adopted the third son, William

J. Holzer

Wm Sherman

Tecumseh, and procured his appointment as a cadet at West Point, where he was trained for his great services in upholding the Union and bearing its flag in triumph "from the mountains to the sea."

John was the eighth child. His recollections are of the gradual scattering of the family, till but three children were left with their mother. In 1831 a cousin of his father, named John Sherman, took him to his home in Mount Vernon, where he remained four years attending school. At the age of twelve he returned to Lancaster, and entered the academy to prepare himself for college. At the end of two years he was far enough advanced to enter the sophomore class. Want of means and a strong desire to be self-supporting changed the current of his life. He obtained the position of junior rod-man in the corps of engineers engaged on the Muskingum improvement. In the spring of 1838, when only fifteen, he was placed in charge of the section of that work at Beverly, and so continued till the summer of 1839, when he was removed because he was a Whig. The responsibility attending the measurement of excavations and embankments, the leveling for a lock to the canal, and the construction of a dam, proved a better education than could have been obtained elsewhere in the same time. He studied law in the office of his brother Charles T. Sherman, afterward Judge of the United States District Court. He was admitted to the bar in 1844, and at once entered into partnership with this brother at Mansfield, where, during the ten years preceding his entrance into Congress, his ability and indefatigable industry gained for him distinction and pecuniary success.

In 1848 Mr. Sherman was a delegate to the Whig Convention at Philadelphia which nominated General Taylor for President. In August of the same year he married Cecilia, only daughter of Judge Stewart of Mansfield. In 1852 he was a Senatorial delegate to the Baltimore Convention, which nominated General Scott. His position as a conservative Whig, in the alarm and excitement consequent upon the attempt to repeal the Missouri Compromise, secured his election to the Thirty-fourth Congress, taking his seat December 3, 1855. A ready and forcible speaker, his thorough acquaintance with public affairs made him an acknowledged power in the House from the first. He rose rapidly in reputation as a debater on all the great questions agitating the public mind during that eventful period: the repeal of the Missouri Compromise, the Dred Scott decision, the imposition of slavery upon Kansas, the fugitive slave law, the national finances, and other measures involving the very existence of the republic. His appointment by Speaker Banks as a member of the committee to inquire into and collect evidence in regard to the "border-ruffian" troubles in Kansas was a turning-point in his political career. On account of the illness of the chairman, Mr. Howard of

Michigan, the duty of preparing the report devolved upon Mr. Sherman. Every statement was verified by the clearest testimony, and has never been controverted by any one. This report, when presented to the House, created a good deal of feeling, and intensified greatly the antagonisms in Congress, being made the basis of the campaign of 1856. He acted with the Republican party in supporting John C. Fremont for the Presidency, because that party resisted the extension of slavery, but did not seek its abolition. In the debate on the submarine telegraph he showed his opposition to monopolies by saying: "I can not agree that our Government should be bound by any contract with any private incorporated company for fifty years; and the amendment I desire to offer will reserve the power to Congress to determine the proposed contract after ten years." All bills appropriating money for public expenditures were closely scrutinized, and the then prevalent system of making contracts in advance of appropriations was denounced by him as illegal. At the close of his second Congressional term he was recognized as the foremost man in the House of Representatives. He had, from deep and unchanged conviction, adopted the political faith of the Republican party, but without any partisan rancor or malignity toward the South. He was reelected to the Thirty-sixth Congress, which began its first session amid the excitement caused by the bold raid of John Brown. Helper's "Impending Crisis," a book then recently published, was the cause of the protracted struggle which ensued for the Speakership. At the end of eight weeks, Mr. Sherman, who needed but three votes to secure his election, retired from the contest, and Mr. Pennington of New Jersey was elected Speaker. He was then made Chairman of the Committee of Ways and Means. He took a decided stand against ingrafting new legislation upon appropriation bills, saying: "This is a practice which has grown up within the last few years, and the Committee of Ways and Means deem it their duty at once to put a stop to it; and we have determined, so far as we can, to resist the adoption of all propositions looking to a change in existing law by amendments upon appropriation bills. The theory of appropriation bills is that they shall provide money to carry on the government, to execute existing laws, and not to change existing laws or provide new ones."

In 1860 he was again elected to Congress, and when that body convened in December the seceding members of both Houses were outspoken and defiant. The message of President Buchanan showed that he was perplexed and overwhelmed by events which he had not the courage to control. At the beginning of Buchanan's administration the public indebtedness was less than \$20,000,000. At this time it had been increased to nearly \$100,000,000, and in such a crippled condition were its finances

that the Government had not been able for more than a week to pay the salaries of members of Congress and many other demands. Mr. Sherman proved equal to the occasion in providing the means for the future support of the Government. His first step in this direction was securing the passage of a bill authorizing the issue of what have since been known as the Treasury notes of 1860.

In March, 1861, he was elected to fill the vacancy in the Senate caused by the resignation of Salmon P. Chase. He was reelected Senator in 1867 and in 1873. During the greater part of his Senatorial career he was Chairman of the Committee on Finance, and served also on the Committees on Agriculture, the Pacific Railroad, the Judiciary, and the Patent Office. After the fall of Fort Sumter, under the call of President Lincoln for 75,000 troops, he tendered his services to General Patterson, was appointed his aide-de-camp without pay, and remained with the Ohio regiments in his command till the meeting of Congress in July. After the close of this extra session he returned to Ohio, and received authority from Governor Denison to raise a brigade. Largely at his own expense, he recruited two regiments of infantry, a squadron of cavalry, and a battery of artillery, comprising over 2,300 men. This force served during the whole war, and was known as the "Sherman Brigade." The most valuable services rendered by him to the Union cause were his efforts in the Senate to maintain and strengthen the public credit and to provide for the support of the armies in the field. On the suspension of specie payments, about the first of January, 1862, the issue of United States notes became a necessity. The question of making them a legal tender was not at first received with favor. Mainly through the efforts of Senator Sherman and Secretary Chase, this feature of the bill authorizing their issue was carried through the House and Senate. They justified the legal-tender clause of the bill on the ground of necessity. In the debates on this question Mr. Sherman said: "I do believe there is a pressing necessity that these demand-notes should be made legal tender, if we want to avoid the evils of a depreciated and dishonored paper currency. I do believe we have the constitutional power to pass such a provision, and that the public safety now demands its exercise." The records of the debate show that he made the only speech in the Senate in favor of the national-bank bill. Its final passage was secured only by the personal appeals of Secretary Chase to the Senators who opposed it. Mr. Sherman's speeches on State and national banks are the most important that he made during the war. He introduced a refunding act in 1867, which was adopted in 1870, but without the resumption clause. In 1874 a committee of nine, of which he was chairman, was appointed by a Republican caucus to secure a concurrence of action. They agreed upon a bill fixing the time for the

resumption of specie payments at January 1, 1879. This bill was reported to the caucus and the Senate with the distinct understanding that there should be no debate on the side of the Republicans, and that Mr. Sherman should be left to manage it according to his own discretion. The bill was passed, leaving its execution dependent upon the will of the Secretary of the Treasury for the time being.

President Hayes appointed Mr. Sherman Secretary of the Treasury in March, 1877. His transfer from the Finance Committee of the Senate to the Treasury Department was regarded with great satisfaction by all who were in favor of refunding the public debt into bonds bearing a low rate of interest, and who desired the success of specie resumption in 1879. What has been accomplished, during his administration, relating to these important measures, is fully given in this volume under the titles RESUMPTION OF SPECIE PAYMENTS, and REFUNDING THE NATIONAL DEBT.

SHIELDS, General JAMES, born at Dunganon, Tyrone County, Ireland, in 1810, died at Ottumwa, Iowa, June 1st. He emigrated to the United States in 1826, studied law, and commenced the practice of his profession in Kaskaskia, Illinois, in 1832. He was a man of fine personal presence, and possessed a rich, sonorous voice, which he knew how to use to advantage. His manners were pleasing and cultivated, and there was an attraction about him which made it an easy matter for him to become a leader in anything in which he took a part. Much of the success of his life resulted from this gift. In 1836 he was elected to the Legislature from Randolph County, and while at the capital made the acquaintance of Stephen A. Douglas, Abraham Lincoln, John J. Hardin, and others of subsequent distinction. In 1839 he was elected State Auditor, in 1843 was appointed a Judge of the State Supreme Court, and in 1845 Commissioner of the General Land-Office. When the war with Mexico broke out he was appointed a brigadier-general by President Polk, and was assigned to the command of the Illinois Volunteers. He served under General Taylor on the Rio Grande, under General Wool at Chihuahua, and under General Scott at the capture of the city of Mexico. At the battle of Cerro Gordo he was dangerously wounded by a ball passing through his right lung and barely missing his spine. After his recovery he was engaged in the battles around the city of Mexico. At Chapultepec he was more seriously wounded by a ball in his stomach, and in recognition of his services he was brevetted major-general. In 1848 he was appointed by the President Governor of Oregon Territory, which office he resigned to accept that of United States Senator from Illinois. He served until 1855, and shortly afterward took up his residence in Minnesota, and upon its admission as a State in 1858 was elected Senator for the term of two years. He then removed to California, where he remained

two years, and married the wife who survives him. In 1861 he was commissioned a brigadier-general and joined the right wing of the Army of the Potomac. At Kernstown and Port Republic he came nearer defeating General "Stonewall" Jackson than any other Federal general ever did. He resigned his commission in 1863 and settled in Wisconsin, but soon after removed to Carrollton, Missouri, where he resumed the practice of his profession, and served as a Railroad Commissioner. In 1874 he represented Carroll County in the Legislature, and in January, 1879, he was elected by the Legislature to serve out the unexpired term (six weeks) of the deceased Senator Bogg. On his return he was tendered a reception at Jefferson City, which took place in the hall of the House of Representatives. He made a lengthy and very successful address. With the exception of an occasional lecture or address to assemblages of private citizens, he afterward remained in retirement.

SIGNAL SERVICE, METEOROLOGICAL DIVISION OF THE UNITED STATES. In the field, in time of war, the Signal Service of the United States Army is equipped to maintain communication by signals, by telegraph, or by semaphores between different portions of an army or armies, or between armies and fleets. In war or peace it communicates to proper authority information of danger of any description. The field-telegraph trains of the Signal Service are organized for use with armies. They are managed by soldiers who are drilled to march with, manœuvre, work, and protect them. The train carries light or field telegraph lines, which can be very quickly erected or run out at the rate of two or three miles per hour. They can be put in use for any distance, and be as rapidly taken down, repacked, and marched off with the detachment to be used elsewhere.

The Signal Service also transmits intelligence in reference to storms or approaching weather-changes by the display of signals of warnings and by reports posted in the different cities and ports of the United States. Maps showing the state of the weather over the United States are exhibited at Board of Trade rooms, Chambers of Commerce, and other places of public resort. Bulletins of data for all the stations are also prominently displayed and distributed without expense to the leading newspapers.

Signal-stations are also established in connection with the life-saving stations. These stations are connected by telegraph, and, in addition to displaying storm-warning signals and making the usual meteorological reports, make special reports upon the temperature of the water, tempests at sea, the sea-swells, etc. They also summon assistance to vessels in distress from the nearest life-saving stations or from the nearest port.

Stations for river-reports, to give notice of the conditions of the rivers affecting navigation and floods, are also established on the principal interior rivers and their tributaries.

The officers and men of the Signal Service are instructed for the different branches of the service at Fort Whipple, Virginia, and at the Central Office in Washington, D. C. They are taught signaling in all its branches, telegraphy, the use of the various meteorological instruments, the modes of observing, and the forms and duties required at stations of observation; the force is also drilled with arms, with the field-telegraph train, the construction of permanent telegraph lines, and in the usual duties of soldiers. For the duties of the observation of storms and for the display of warning signals, all stations communicate directly with the Signal Office in Washington over telegraphic circuits arranged with the different telegraph companies, and connecting with the office at fixed hours, each day and night. Each station is equipped with the following instruments: barometer, thermometer, maximum thermometer, minimum thermometer, anemometer with electrical attachment and self-registering apparatus, hygrometer, wind-vane, rain-gauge, and, at stations located on rivers, lakes, or seacoasts, thermometers for taking the temperature of water at different depths.

The readings of these instruments, made three times a day at fixed hours, are reported to the central office in cipher.

These reports from the stations of observation extending over territory reaching from the Atlantic to the Pacific Oceans, and from the capes of Florida into British America, are not unfrequently concentrated at the central office in the space of forty-five minutes. The stations at which cautionary signals are displayed are equipped with flags and apparatus for exhibiting the cautionary day or night signals, and also for communicating with vessels of any nationality.

The meteorological division of the United States Signal Service was established in 1870. It was the natural outgrowth of the service of the Signal Corps during the ten preceding years, and was an additional duty imposed upon it. The progress of modern inquiry into the changes taking place in the weather, and especially into the phenomena of storms, had for many years previous strengthened the conviction that they are not capricious, but follow certain laws. To provide, therefore, for taking meteorological observations, with a view to "giving notice by telegraph and signals of the approach and force of storms," was the end originally contemplated by the joint resolution of Congress, which passed February 9th of that year, authorizing the Secretary of War to carry this scheme into effect. The organization of a meteorological bureau adequate to the investigation of American storms, and to their preannouncement along the northern lakes and the seacoast, was, under the auspices of the War Department, immediately intrusted to the Chief Signal Officer of the Army, Brigadier-General Albert J. Myer; and the division thus created in his office was designated as the "Division of Tele-

grams and Reports for the Benefit of Commerce and Agriculture.”

This was the first attempt of the United States Government to inaugurate a national weather service. The peculiar geographical extension of the country, stretching over fifty-seven degrees of longitude and twenty-two of latitude, afforded exceptional advantages for investigating and predicting the storms which cross its broad area; for experience and observation had shown that they generally move from west to east, and not frequently along the meridians. But the vast extent of the storm-field, coupled with the fact that the “law of storms” was then but roughly outlined, made the execution of this task a very difficult and tedious work, calling for great caution and the most accurate observations. Redfield had demonstrated from ship-reports that on the sea cyclonic disturbances in the northern hemisphere rotate from right to left—in a direction contrary to the hands of a watch. Ferrel and others had demonstrated that, mathematically or mechanically, this law should in theory hold good for both land and sea. The Dutch investigator Buys-Ballot, from actual weather-observations, had shown that the law held good for Holland. But its demonstration on the wider continental field of America, as well as the discovery of many details affecting its practical application to weather-prediction, awaited further, more extensive, and more exact research. It was not until November 1, 1870, that the Chief Signal Officer was able to issue weather-bulletins. On that day, from twenty-four stations, the first systematized *simultaneous* reports of the weather ever taken in the United States were read from their instruments by the Signal Service observers, and telegraphed to the Central Signal Office at Washington. The same day the bulletins made up from these reports were prepared and telegraphed by the Chief Signal Officer to more than twenty cities. The first storm-warning was bulletined along the lakes a week later, for the benefit of the large commercial and marine interests exposed to the furious gales which sweep, especially in autumn, over their waters. These tentative attempts to introduce the novel system of practical weather-telegraphy were vigorously followed up, and the success realized so early in the operations of the service was as gratifying to the public as to the office itself. This success was due in large measure to the system of observation and reports being in the strictest sense *simultaneous*.

Weather-Maps.—To arrive at any result, it was found necessary almost from the first to chart weather-maps from the reports thus received by telegraph. The Signal Service weather-map is a map of the United States on which all the Signal Service stations are entered in their appropriate geographical places, and having annexed to each station the figures expressing the readings of the barometer and thermometer, the velocity of the wind, the amount of rainfall within the previous twenty-four or

eight hours, etc.; and also symbols indicating the direction of the wind, and the form and amount of cloud, at the given time of observation. The observations taken at each station are all put down on the map, and the relations between them are thus made sensible to the eye of the Signal Officer, by the figures and symbols, and also by lines drawn to group the geographical areas over which like conditions prevail. The weather-map is, therefore, to the meteorologist what the telescope is to the astronomer—an indispensable means of obtaining a survey, and prosecuting a careful and connected study of the phenomena he seeks to understand. The accompanying “War Department Weather-Map,” prepared by the Signal Service, illustrates the method of charting the map graphically. This specimen map is about three eighths the size of those from which the Signal Office works. It represents the atmospheric conditions as they were simultaneously observed at 7 A. M. mean Washington time, December 23, 1879: the area marked “L” defining a storm or cyclonic area in Texas with low pressure, and that marked “H” defining the limits of an anticyclonic area, in which the barometer is high. Around the latter the winds are seen to draw in the direction of the hands of a clock; but around the former, in a contrary direction.

Simultaneous Weather-Observations.—In organizing this service, the first problem that presented itself was to devise a system of observations which would when mapped accurately represent the aerial phenomena in their *actual* relations to each other, and thus enable the investigator to discover the laws of storms and their rates of movement over the earth’s surface. “The history of science,” says one of its foremost representatives, “proves that unconnected, unsystematic, inaccurate observations are worth nothing.” Certainly, in the domain of meteorology, no solid foundation for the science of the weather could have been laid in 1870 upon any of the then existing observational systems. The European weather-stations at that date, and long after, were engaged in making non-simultaneous reports; no two of them, unless they happened to be on the same meridian, read off their instruments at the same time; and consequently their records, valuable as they were for purposes of *local* meteorology, were inadequate and untrustworthy for purposes of rigidly scientific comparison, or for giving accurate numerical data of changes in the ever-restless and fickle atmospheric ocean. In this state of the research, which had made meteorology a proverb for inexactness, General Myer proposed a new, independent, and original system of investigation—the system of *SIMULTANEOUS METEOROLOGY*—on the results of which the weather-predictions and storm-warnings of the Signal Service have been based from the beginning of its work until now.

This novel, yet perfectly simple, scheme aimed at the rescue of weather-research from

the chaos in which for ages it had lain. Its cardinal principle of observation is to gain a daily or tri-daily view of the atmospheric conditions and movements over the country as they *actually* are, and as they would be seen could they, so to speak, be photographed. In all previous systems this was far from attainable, for lack of simultaneous reports. As formerly observers had read off their barometers and other instruments at the given hours of local time, and not at the same moment of actual time, the reports from stations at widely separated meridians necessarily yielded unnatural and distorted representations of the phenomena to be studied. The Chief Signal Officer's plan reversed this vicious arrangement, and inaugurated one by which all the weather-observers over the entire field of inquiry, from the Atlantic to the Pacific coast, were to observe and read off their instruments "at the same moment of actual (not local) time." Under the new method, introduced by General Myer in 1870, all the members of the Signal Corps registered and reported the weather of the United States, as it were, by given strokes of a single clock—the same moments of *physical* time—corresponding to certain fixed moments of Washington mean time.

Simple as this innovation appears, it is vital to all successful research in an aerial sea whose currents and waves rush with great rapidity, and perform some of their evolutions while the sun in his daily march is passing from one meridian to another. The old methods, without exception, though called "synchronous," were not truly so,* since each one of the observers reported at the local time of his own special station. When, therefore, the stations were extended over thousands of miles in an *east and west* direction (as was necessarily the case in the United States, owing to its geographical shape), their data were misleading. Columbus on his first voyage to America discovered that within the tropics the waters of the ocean move from east to west; but in the extra-tropical belt they move from west to east. As with the waters of the sea, so with the winds: from the equator nearly to the polar circles the great perennial air-currents (in which cyclones lie imbedded and in which they move forward as eddies in a stream) move on the surface of the earth along the parallels of latitude, and but seldom along the

meridians of longitude. For this physical reason, it was found to be of the utmost importance to observe these great movements at many points over long portions of the parallels of latitude *simultaneously*. In no other way can the bearings of the various storm-winds and their connected phenomena be detected, or the rates of their transition determined. All the predictions and deductions of the Signal Office, therefore, have from its beginning until now been based on reports taken *simultaneously*.

Early Developments.—As the early developments of the Signal Service were necessarily pioneer work, it being the first attempt to institute a system of "simultaneous" weather-telegraphy, and finding many of the laws of storms now defined then scarcely formulated or entirely unknown, its advance in 1871 was cautious and slow. But, when once it had established the fact that at any hour of the day or night it could almost instantly call for reports from all parts of the country, and receive them from all its stations, taken at the same moment of time and revealing the actual status of the atmosphere over its whole field of inquiry, the sense of security in its scientific processes, and the confidence that the results were built upon "the solid ground of nature," gave it a powerful forward impulse. The new method of simultaneous reports, it was felt, was a sure road to the desired goal. In a short time additional stations were established within the United States, making sixty-six in

HORIZONTAL MOVEMENTS OF AIR AROUND CENTER OF CYCLONE IN NORTHERN HEMISPHERE.

(Large arrow shows path of storm; smaller arrows show the course of the winds increasing in velocity as they approach the centre.)

* By "synchronous" weather-reports meteorologists only mean reports taken *nominally* at the same hour. Thus, if a London observer reported the weather at 7 A. M. Greenwich time, and a Berlin observer reported it at 7 A. M. Berlin time, the two reports would be called "synchronous"; but, in reality, they would not be synchronous, for the difference between 7 A. M. at one and the other point is about 54 minutes. But 54 minutes makes a great difference in the flight of a storm and the shiftings of atmospheric masses, which can not therefore be represented on weather-maps based upon "synchronous" reports. A weather-map prepared from such "synchronous" reports reflects the aerial elements untruly, as a telescope lens having many irregular faces, and not a single focus, would reflect the surface of the moon. "Simultaneous" reports, on the contrary, when entered on a weather-map, form a true mirror of the atmospheric masses and movements as they are in nature.

all. A comparison of the tri-daily forecasts, or "probabilities," as they were styled, with the weather-conditions following and reported as actually observed, so far as verified up to November 1, 1871, had given an average of 69 per cent. From that date to October 1, 1872, the average of verification rose to 76.8 per

cent.; and during the year ending June 30, 1872, 354 cautionary signals were issued, with an estimated percentage of correctness amounting to 70. These results also afforded the best elucidation and the most complete demonstration of the law of storms and the movements of cyclones that had ever been obtained in any country.

By act of Congress approved June 10, 1872, the Signal Service was charged with the duty of providing such stations, signals, and reports as might be found necessary for extending its research in the interests of *agriculture*. The agricultural societies over the land earnestly entered into and coöperated with the Service in this new development of its inquiries and reports. Eighty-nine such societies, thirty-eight boards of trade or chambers of commerce, numerous scientific institutions, colleges, and leading professional men put themselves in communication with the Chief Signal Officer, with a view to facilitate this branch of his work. The scientific societies at home and abroad began to take the liveliest interest in the general labors of the Office, and to express the highest approval of the results attained. And, beyond the limits of the United States, numerous marine observations, which General Myer had previously desired, with the purpose of studying the atmosphere as a unit both on the ocean and the land, were forwarded regularly to his office.

The expansion of the work in 1873, under the stimulus of a world-wide favorable notice, was even more rapid than in the previous year. On March 3d Congress authorized the establishment of Signal Service stations at the lighthouses and life-saving stations on the lakes and seacoast, and made provision for connecting the same with telegraph-lines or cables "to be constructed, maintained, and worked under the direction of the Chief Signal Officer of the Army, or the Secretary of War, and the Secretary of the Treasury." Early in this year the Office also began the regular publication of a "Monthly Weather Review," summarizing all its data and showing the results of its investigations, as well as presenting these in graphic weather-charts adapted to the comprehension of the unscientific part of the communities it was destined to reach. The library of the Signal Office was increased to some 2,500 volumes bearing on the special scientific duties imposed upon it. The tests of meteorological instruments previously instituted enabled it to greatly improve and simplify its entire instrumental apparatus at all stations. The percentage of verification of its predictions for the year ending June 30, 1873, was for each geographical division as follows:

New England.....	81-50
Middle States.....	81-17
South Atlantic States.....	79-92
Lower Lake region.....	78-90
Upper Lake region.....	75-25
Eastern Gulf States.....	77-16
Western Gulf States.....	74-40
Northwest.....	74-00

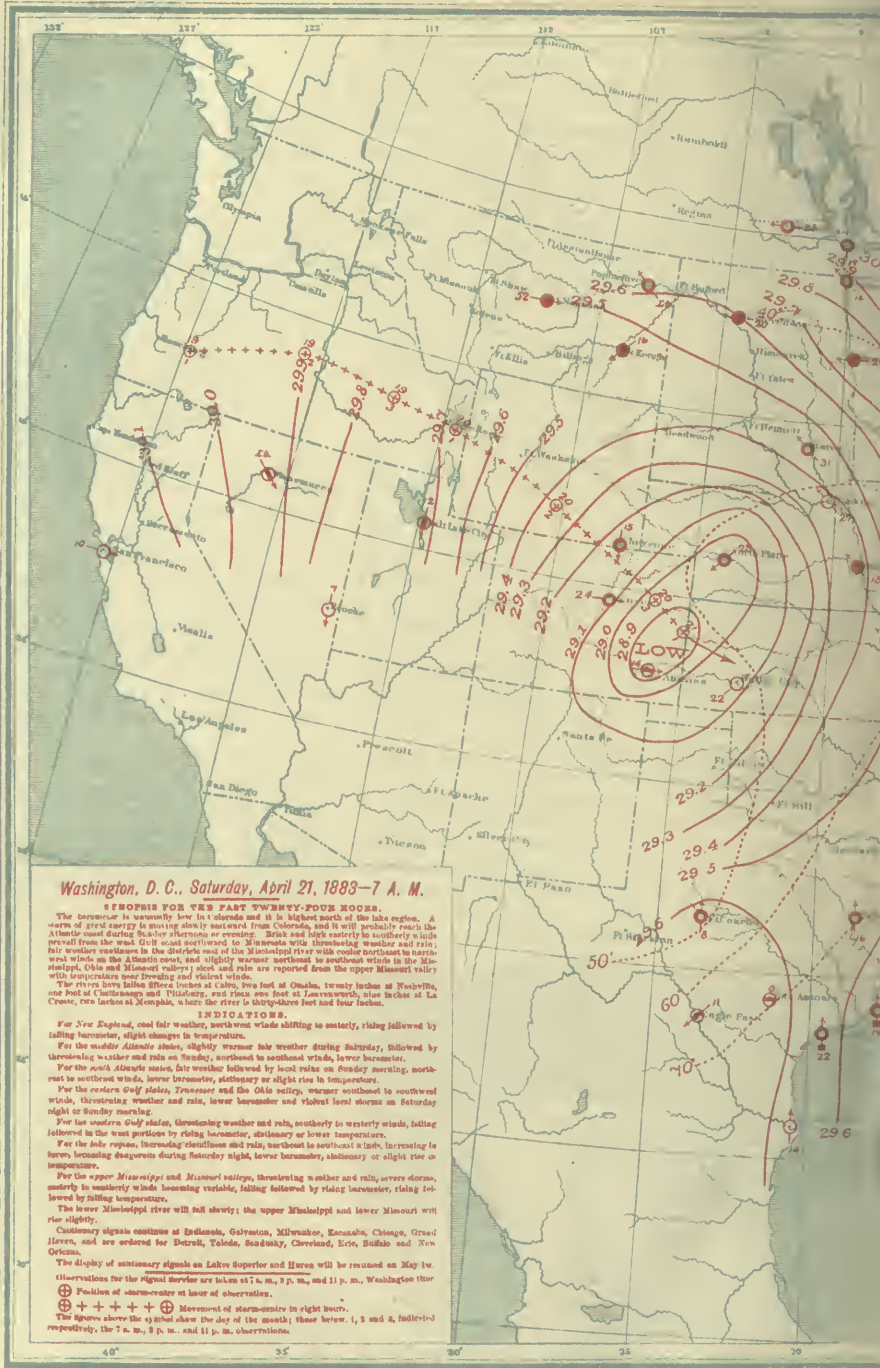

It was in September of this year also that, at the proposal of the Chief Signal Officer in the International Congress of Meteorologists convened at Vienna, the system of world-wide coöperative weather-research, since then so extensively developed, was inaugurated, and began to contribute its observational data to the Signal Office records. Thus, in his report for 1873, the Chief Signal Officer was able to say of its labors, "Their utility is no longer questioned, and effort at home and abroad turns only toward their development." The Service was now no longer an experiment, but an assured success.

The operations of this division of the Signal Service, popularly known as the "Weather Bureau," have been, every year since its creation, somewhat enlarged by Congress, until they have become numerous and varied. The first to be specially mentioned is the daily work of weather-prediction, including storm-warnings. These are issued from the office of the Chief Signal Officer three times every day, under the title of "Indications" and "Cautionary Signals," and are based upon three series of simultaneous weather-reports telegraphed to Washington from all parts of the United States and Canada. The observations are taken simultaneously at all stations at 7 A. M., 3 P. M., and 11 P. M., and at once put upon the wires. The number of stations from which tri-daily telegraphic reports are received at the central office is 133. Telegraphic reports have been also regularly received from one West India station, and during the hurricane season from five. The total number from which such reports are received daily is 159; but, including those sent by mail, it is much larger; while the total of reporting stations within the United States territory, including the special river and sunset stations, on the 30th of June,

SIGNAL SERVICE STATION ON THE SUMMIT OF MOUNT WASHINGTON.

1879, was 229. The vertical range of the observations extends from sea-level to the summits of Mount Washington (6,286 feet) and Pike's Peak (14,151 feet).

Washington, D. C., Saturday, April 21, 1889—7 A. M.

SYNOPSIS FOR THE PAST TWENTY-FOUR HOURS.

The barometer is unusually low in Colorado and it is highest north of the lake region. A storm of great energy is moving slowly eastward from Colorado, and it will probably reach the Atlantic coast during the next afternoon or evening. Brisk and cold easterly to southerly winds prevail from the west Gulf coast southward to Minnesota with threatening weather and rain; but weaker easterlies in the districts east of the Mississippi river with cooler northerly to north-west winds on the Atlantic coast, and slightly warmer northerly to south-west winds in the Mississippi, Ohio and Missouri valleys; sleet and rain are reported from the upper Missouri valley with temperatures near freezing and violent winds.

The rivers have fallen three inches at Cairo, five feet at Omaha, twenty inches at Newbyville, one foot at Columbus and Pittsburg, and risen one foot at Lawrenceville, nine inches at La Crosse, ten inches at Memphis, where the river is thirty-three feet and four inches.

INDICATIONS.

For the New England, cool fair weather, north-west winds shifting to easterly, rising followed by falling barometer, slight changes in temperature.

For the middle Atlantic states, slightly warmer fair weather during Saturday, followed by threatening weather and rain on Sunday, north-west to south-west winds, lower barometer.

For the south Atlantic states, fair weather followed by local rains on Sunday morning, north-west to south-west winds, lower barometer, stationary or slight rise in temperature.

For the western Gulf states, Tennessee and the Ohio valley, warmer south-west to south-west winds, threatening weather and rain, lower barometer and violent local storms on Sunday night or Sunday morning.

For the western Gulf states, threatening weather and rain, southerly to westerly winds, falling followed in the west portion by rising barometer, stationary or lower temperature.

For the lake region, increasing cloudiness and rain, north-west to north-east winds, increasing to heavy becoming drizzles during Saturday night, lower barometer, stationary or slight rise in temperature.

For the upper Mississippi and Missouri valleys, threatening weather and rain, severe storms, southerly to southerly winds becoming variable, falling followed by rising barometer, rising followed by falling temperature.

The lower Mississippi river will fall slowly; the upper Mississippi and lower Missouri will rise slightly.

Customary signals continue at Baltimore, Galveston, Milwaukee, Escanaba, Chicago, Grand Haven, and are ordered for Detroit, Toledo, Sandusky, Cleveland, Erie, Buffalo and New Orleans.

The height of ordinary signals at Lake Superior and Huron will be resumed on May 1st.

Observations for the signal service are taken at 8 a. m., 3 p. m., and 11 p. m., Washington time.

⊕ Position of storm-center at hour of observation.

⊕ + ⊕ + ⊕ + ⊕ Movement of storm-center in eight hours.

The figures above the symbol show the day of the month; those below 1, 5 and 8, respectively, the 7 a. m., 3 p. m., and 11 p. m. observations.

From the telegraphic data, of course, the tri-daily "indications" are prepared. The general process is this: Having taken their instrumental and other observations at either of the hours specified, the observers prepare their reports in *cipher*, by which expense for the telegrams and time in their transmission are saved, as well as greater accuracy secured. The observations include the actual and the corrected readings of the barometer and thermometer, and their changes since previous report; the direction and velocity of the wind, as well as its pressure; the relative humidity of the air; the amount of rain or snow fallen since last report; the amount and form of clouds, auroras, haze, fog, smokiness, frost, etc.; and to these data the river stations add the changes or oscillations in the rivers, and the seacoast stations the direction and degree of the ocean-swell. The maximum and minimum range of the temperature in the past twenty-four hours are also given. These data, condensed by means of the cipher-code into ten or twelve words for each report, as soon as received in the telegraph-room of the Washington office, are translated from cipher and entered on the bulletin blanks, and also entered in their proper places on the weather-maps. This is done in the room where the predictions and storm-warnings are prepared after all the dispatches are in, and under the eye of the assistant engaged in shaping the weather-predictions for the public press. This was, for some years after the Signal Service was organized, pioneer work—the first attempt at weather forecasts based on simultaneous telegraphic reports ever set on foot.

Synoptic Weather-Map.—As a concomitant and indispensable aid in the analysis of the reports and in utilizing them for purposes of prediction, synoptic weather-maps, which would show the concurrent conditions of the weather as they simultaneously and actually exist over the country, for the first time became possible in 1870. The aim kept in view had been to secure a bird's-eye view of the atmosphere, and the data thrice daily supplied by the Signal Service reports sufficed for the construction daily of three maps, showing the weather-status and all the wind and storm movements in their connection and interdependence. By preparing a graphic weather-map embodying the telegraphic data furnished to the Chief Signal Officer every eight hours in the day, the officer charged with formulating the storm-predictions could gain and retain a clear idea and mental image of the aerial ocean. A great soldier has said, "There is nothing ideal in war"; and it may be said with equal force, there is no work which for its intelligent execution demands greater precision of method, more copious and circumstantial details, and closer attention to the developments of the hour, than weather-forecasting over a continent. The weather-map brings all these minutiae within view, and makes the

meteorologist master of the whole mass of observations, as hours consumed in the study of the numerical data could not do. Every weather-map is, therefore, a *generalization* in itself, as well as a record of the data. A series of weather-maps is a history of the ebb and flow, the fluctuations and tossings of the aerial ocean, and of the more subtle yet influential processes concerned in producing the weather and determining the climate of the country.

These maps, offering in a synoptic view the results deduced or deducible from thousands of observations, enable the Chief Signal Officer to prepare statistics and reports for the use of individuals, institutions, and the public journals, upon special requests for such meteorological information as their business or publications demand. The calls for such consolidated data, and the elucidation of obscure climatic conditions, which these reports and maps alone can supply, have increased until compliance with them has become a work of magnitude, requiring a greater force than the office now has at command.

Military Organization.—An economic feature of the Weather Bureau is that it is a *military service*. All its observational work is done by enlisted men and officers of the army, and all its official publications are prepared under authority, and with the regularity and dispatch to be had only under military discipline. The military relations of the Signal Service have been found by experience to give it great advantages in extending its network of stations in the sparsely populated territories of the country, whence, for the development of its scientific research, it must draw many of the most indispensable meteorological reports. The observers of the Signal Corps are trained not only in the art and practice of military field-signaling, but in the ordinary army drill and rules and habits of discipline; so that in time of war they constitute a part of the regular fighting force of the nation, ready for active service in repressing internal disorder and repelling foreign invasion. Constituting, in fact, only a portion of the regular army, occupied in time of peace with scientific work, but available for duty in the ranks in the emergency of war, the cost of their maintenance is but a small additional burden upon the country, far more than required by their meteorological services to it. Experience has fully shown in other countries that arduous meteorological labors such as they perform can not be secured from any civil corps. As the Signal Service observers must report several times a day to the Washington office, each regular general report serves in effect as a telegraphic roll-call of all the stations spread over the country from the Atlantic to the Pacific, and from the lakes to the Gulf of Mexico, insuring promptitude, vigilance, and steadiness in the entire Signal Corps.

In addition to this regular force of military observers, there was transferred to the Signal

Service on February 2, 1874, at the instance of Professor Joseph Henry of the Smithsonian Institution, the entire body of Smithsonian weather-observers in all parts of the United States. This volunteer civilian force continues to the present day to contribute its scientific labors in behalf of the Signal Service researches in the domain of continental meteorology and climatology. The volunteer observers thus co-operating with General Myer, with others who have embarked in the work since 1874, now number 240, and their observational data greatly enrich the records of the Signal Office. Many of them have acquired great exactness and experience in instrumental observation and noting and recording physical phenomena, so that their monthly reports to the Chief Signal Officer alone make a rich repository of American climatology. This voluntary corps is undergoing constant additions, and inducements are held out by the Service to competent civilians, especially in the sparsely settled and frontier districts, to join in its investigations.

Practical Uses of Weather-Reports.—With this brief notice of the organization of the Service and its methods of weather-observing and weather-forecasting, we hasten to the practical applications of the work. In referring to the wide-spread interest in the weather-predictions of the past few years, a recent writer in the "Quarterly Review" observes, "Some basis of solid value to the public must exist to account for such a general popularity of the weather-service." The fact is, that the public are just beginning to see some of its more obvious utilities.

The tri-daily "Indications" are designed to give timely notice of the general weather-changes to occur in the twenty-four hours following their issue. As they are telegraphed from the Washington office, and adapted to the convenience of the daily press, they are greatly condensed, to bring the cost of telegraphing within the restricted means of the Service; and yet they must be made sufficiently full to cover the whole country. These conditions are hindrances to their usefulness, and the brevity of the dispatches exposes them at times to popular misinterpretation. But, notwithstanding these drawbacks, the scope of their practical application to all classes of industry is large and continually increasing. When the first propositions of a weather bureau were advanced, the highest end thought attainable, by the most sanguine, was to give warnings of the *great* storms that ravage the sea-coasts of the United States. This, however, is but a small part of the public interests it subserves. The number of persons who find that the reports and forecasts of the Service may be utilized for every-day life is constantly increasing. Signal observers are not unfrequently subpoenaed to bring the records of the weather into the courts, as legal evidence in cases upon which they bear. Grain and cotton merchants find the "Indications" of value in calculations

of the forthcoming crops. Emigrants and "prospectors" intending change of residence use them to determine the climate of new towns. Physicians, sanitarians, and boards of health employ their data to detect dangerous conditions of the atmosphere of the cities, and for investigating the origin and spread of diseases and epidemics, as in the case of the recent yellow-fever visitations of the South. The pork-packers, fruit-importers, and fish- and oyster-dealers keep an eye on them to secure themselves against exposure of perishable goods to weather too damp or too warm. They are of use to specialists in manufacturing and hygienic interests, and are consulted by thousands planning journeys or excursions for health or pleasure. River-boatmen, farmers, sugar-planters, fruit-growers, and ice dealers find occasion to utilize them. Mechanics judge from the prognostics whether they can work outside on the morrow. The meteorological data supply engineers with information indispensable for planning economical and storm-proof architecture. Railroad officials, during snow-blockades, are kept advised by the reports, so that they are enabled to make provision for clearing the tracks; and railroad freight officers find them useful for facilitating transportation. These are some of the daily applications made of the Signal Service work in the interior and central, not less than in the seaboard sections of the country. In every branch of agriculture and trade the deductions that could be made from the published synopses and indications of the weather would have immensely enhanced value if the public could be instructed how to frame them. In military operations over the vast West, the intelligence of approaching storms is of no little value, in timing movements so as to avoid heavy roads and dangerous delays. "Had we, a quarter of a century ago," says a British meteorologist, "known the rigor of the Crimean climate, who would have dared to send out an army unprepared to meet the hardships of a Black Sea winter? Ask the physician at what price he would value the power of giving timely warning of a 'cold snap' to his patients. Ask the builders of London what they have lost in the last ten years by sudden frosts or unexpected down-pours of rain. Above all things, go to the farmer and ask what he would freely pay to know at seed-time what weather he might really expect in harvest. The fact is, there is not a profession, not a handicraft, not a process in animal or vegetable life, which is not influenced by meteorological changes."

Wide Diffusion of the Weather-Reports.—The distribution of the tri-daily "Synopses and Indications" over the whole country may be understood from the following official facts: The total number of these forecasts—1,095 issued every year—are telegraphed at the moment of issue to the principal cities, and are published in some form in almost every newspaper in the country. In many public and

conspicuous places, they are also bulletined for popular inspection. In order that they may reach the farming populations, an arrangement is effected with the Post-Office Department, by which special "Farmers' Bulletins" may be distributed at an early morning hour of each day, except Sunday, along the railroads radiating from the chief cities of the Union. These "Farmers' Bulletins" contain all the matter of the "midnight" report made up in the Washington office at 1 A. M. of each day, which, when it reaches the outlying stations by telegraph, is printed before daylight, and copies of it mailed to the rural postmasters for many miles around, and by them displayed in their offices. There are now nineteen cities at which the Signal Service observers reprint and circulate the telegraphic forecasts to 6,042 sub-centers among the agricultural communities while the reports are yet fresh and timely. Each postmaster has the order of the Postmaster-General to display the report as soon as received in a frame furnished for the purpose, and to report in writing to the Chief Signal Officer the time of its receipt and display. The intelligence of weather-changes, with predictions and other data useful to the farmer in securing his crops or in other ways, it has been found, on an average, reaches the different railway stations, hamlets, and villages throughout the United States in the forenoon. As the predictions cover twenty-four hours, and often hold good for twice that period, they therefore reach the denser rural populations twelve or fourteen hours before the period to which they apply expires, and not unfrequently a day and a half or more.

To make the reports still more widely useful to the agricultural interests, the Chief Signal Officer, by an arrangement between the War Department and different railways, has established a "Railway Weather Bulletin Service." In this work 103 railway companies, distributing daily 3,180 reports to as many railway stations, are now without charge cooperating. The midnight report, exhibiting the "Synopsis and Indications," is telegraphed to the railway companies, whose superintendents are charged with seeing that copies of it are bulletined and posted along their lines a few hours after it emanates from the Washington office. By this means large masses of the rural populations, and residents of districts which can not otherwise be reached in time, secure the benefits of the Government weather service. This system of distribution is in its incipency, but is capable of indefinite extension, and of diffusing the desired weather-data to vast numbers of farmers in the interior centers. The immense demand which has ever existed among all classes for weather-forecasts is strikingly illustrated by the fact, mentioned by the "Penny Post" (an old English paper) in 1833, that up to that year the annual sale of "Moore's Almanack," the weather prognostics of which were proverbially without any basis of scien-

tific observations, still amounted to "a quarter of a million copies."

As many farmers, however, reside too far from an railway station or post-office to obtain timely reports of storms and weather-changes, General Myer has for some time been preparing for distribution at cost-price among such a simple apparatus, which will serve even the uneducated as an indicator of coming changes. This is the "WEATHER-CASE, or FARMER'S WEATHER-INDICATOR." This automatically working instrument is of value in enabling agriculturists to interpret whatever official weather-intelligence reaches them, and to determine for themselves in advance the chief weather-changes, as well as to direct their thoughts and study to those atmospheric phenomena upon a knowledge of which their craft must so much depend. Instructions and rules for interpreting the instrumental variations will accompany the weather-case, and thus practically extend the already immense circle within which the reports are utilized.

Preparing the "Synopsis and Indications."—From reading in the morning newspapers the "Synopsis and Indications" for the day, no one not initiated in the method of preparing them would suspect the magnitude of the work involved in their preparation. The study prerequisite for each of the tri-daily press reports issued includes the draughting of eight graphic charts exhibiting the multiform data furnished by the simultaneous reports telegraphed from all the stations. These charts are: (a.) A chart of barometric pressures, temperatures, and winds (wind-direction and velocity) at the different stations, with the amount of clouds and the kind and amount of precipitation at each station. The isobars (or lines connecting stations where the barometric pressure is the same) are then drawn for every tenth of an inch, as also are isothermal lines for every 10° of temperature; while wind-directions are marked by arrows and their hourly velocities by numbers. (b.) A chart of relative humidities at all stations, with the character and amount of the upper and lower clouds, which have been well called "Nature's weather-guides." On this are traced lines of equal relative humidity over the country, showing the territorial areas over which precipitation is likely to ensue upon the reduction of temperature, or where the clouds are likely to be dissipated by a rise of temperature. As isothermal lines are drawn on this chart, such deductions are facilitated. (c.) A chart of the various cloud-conditions prevailing at the time over the United States, with the "weather" at each station depicted by symbols; also the minimum temperatures and the maximum wind-velocities. The cloud-areas—each form of cloud represented by a different symbol—are outlined, and each one is distinguished. The appearance of the western sky at each station as observed at sunset, which affords a strong indication of the weather to be anticipated for

WEATHER-CASE, OR FARMER'S WEATHER-INDICATOR.

the next twenty-four hours, is also marked on this chart. (d.) A chart of the *normal* pressures—those which from a long series of observations should be expected—and of variations of the actual from the average pressures. The deviations or “departures” of the actual pressures from those which generally prevail are marked on the map by appropriate lines; as also, by the lines of “no variation,” the districts in which the atmosphere is in a state of equilibrium are delineated. (e.) A chart of actual variations of pressure transpiring since the last report, showing the fluctuations of the atmosphere during the previous eight hours. (f.) A chart of dew-point variations which have taken place at the stations during the preceding eight and twenty-four hours. (g.) Lastly, a chart of dew-points, vapor-tensions, and the actual amounts of humidity in the air at the various points of observation. All these charts, each covering the whole of the country, must be made out, and the mass of data they embody sifted and analyzed, preliminary to the preparation of every one of the tri-daily bulletins issued from the central office. This system of mapping, symbolizing, grouping, and numerically notating the data enables the Signal Officer to picture to his eye the exact status of the aerial masses, and to catch the

“run” of the weather in the separate sections of the vast field of observation over which it is executing its manifold manœuvres. These charts have all to be draughted in about an hour or an hour and a half; but they are inter-corrective, each chart serving as a check on the others.

Armed with this charted material, the officer preparing the predictions proceeds first to make up the “Synopsis,” showing the conditions of weather now existing, and then to deduce and write the “Indications,” showing the changes to occur afterward. As soon as this is done, the deductions are telegraphed direct from the office of the Chief Signal Officer to all parts of the country, and are given to the newspapers. The average time elapsing between the simultaneous reading of the instruments at the 290 separate stations scattered over the United States, and the issue of the “Synopsis” and “Indications” based on these readings, has been calculated at one hour and forty minutes.

Verifications of Predictions.—An analysis of the predictions, made for the year ending June 30, 1879, and a comparison with the weather-conditions which actually occurred within the twenty-four hours next ensuing, give the following percentages of verifications:

PERCENTAGE OF VERIFICATIONS FOR EACH MONTH OF THE YEAR ENDING JUNE 30, 1879.

REGIONS.	1878.						1879.					
	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March.	April.	May.	June.
New England.....	80·6	84·4	83·5	87·6	89·1	88·6	85·5	93·8	89·3	81·8	84·3	84·9
Middle States.....	77·8	87·6	85·7	83·4	90·8	87·0	86·0	94·1	90·5	87·2	85·6	86·0
South Atlantic States.....	83·5	89·5	89·2	87·3	91·8	85·5	88·6	92·3	91·6	82·0	80·4	79·8
Eastern Gulf States.....	89·8	91·9	83·4	87·2	88·2	90·1	87·0	92·7	90·7	85·5	76·6	80·4
Western Gulf States.....	88·7	91·2	89·5	89·1	90·4	83·6	83·5	90·9	87·8	81·9	76·7	81·1
Lower Lakes.....	84·9	89·7	81·9	85·3	91·0	87·1	87·0	94·1	91·2	88·2	84·7	88·6
Upper Lakes.....	83·1	87·6	83·8	87·4	89·7	88·4	88·1	92·5	89·6	81·8	87·1	86·8
Tennessee and Ohio Valley.....	81·6	82·8	85·8	86·8	92·4	85·5	86·3	95·8	89·4	84·4	84·2	84·9
Upper Mississippi Valley.....	84·3	86·8	84·2	89·4	92·4	85·2	85·6	92·1	88·1	81·5	84·1	88·3
Lower Missouri Valley.....	82·9	88·2	82·8	86·8	91·5	84·6	84·6	91·4	89·1	80·1	84·0	81·2
Total percentage of verifications....	88·7	87·1	85·0	87·5	90·7	87·1	86·2	93·0	89·7	82·9	82·8	88·7
Percentage of verifications for the year (changes of barometric pressures, temperatures, wind-direction, and character of weather expected, comprised).....												86·6
Percentage of verifications for the year (forecasts of the character of the weather only).....												90·7

These percentages of accuracy refer to predictions of barometric, thermometric, wind-direction, and general weather changes, which are more difficult to make than those relating to future conditions of the weather alone. The percentage of accuracy of the forecasts of the weather alone (including the state of the skies, whether clear, fair, or cloudy, and whether with or without rain) in all of the different districts has been 90·7. The percentage for the Pacific coast region is 89·3. Out of a hundred pre-announcements of the single element of the “weather” for all parts of the country (apart from barometric changes), ninety have been fulfilled by the event.

River Reports.—The important work of overseeing the fluctuations and floods of the great Western rivers, so sensitive to the meteorological changes occurring in their basins,

was at an early period of its history undertaken by the Signal Service. The interstate commerce being necessarily much affected by the oscillations of the rivers, timely warnings of their rise and fall, and daily reports of the exact depth of water at numerous points, were eagerly asked for. The observations of this kind were found of so much importance that they have been extended over the Western, Southern, and California rivers, and deductions made from them, indicating impending changes, are daily published in the Washington weather-reports. All measurements at each river-station are made from the “bench-mark,” as known to the river-men of the vicinity, and the depth of water from the bed of the river to this mark is daily gauged and telegraphed to the central office. Knowing from such telegrams the height of the river at any station,

and knowing the present and antecedent rainfall higher up the river-valley, the office is thus enabled to calculate and announce the time and degree of coming changes. Thus timely premonitions of the great flood-waves that pass down the Mississippi, and also its fluctuations, are issued from the office to the places which it reached on its southerly way.

The gauge used is very simple. It is a plank (A, Fig. 2) of pine or oak timber, two inches thick, ten inches wide, and long enough, when placed obliquely on the slope of the river-bank, to cover the extreme low-water and high-water marks. When firmly imbedded in

graphic river-reports are especially valuable to all river-shipping, and to all interested in the traveling and transportation facilities which depend upon it, as well as giving timely warnings of ice floods or sudden rises and falls. The levee systems of the Mississippi and other great rivers can thus be guarded, and the immense agricultural interests secured, as the flood-warning comes in time to summon the State force to strengthen the imperiled works. Daily bulletins of the river-reports are regularly displayed at Augusta (Ga.), Cairo, Chattanooga, Cincinnati, Davenport, Dubuque, and Keokuk (Iowa), La Crosse (Wis.), Leavenworth, Louisville, Memphis, Morgantown (W. Va.), Nashville, New Orleans, Omaha, Pittsburgh, Portland (Oregon), Red Bluff (Cal.), Shreveport, St. Louis, St. Paul, Umatilla (Oregon), Vicksburg, and Yankton (D. T.).

In connection with this service, surface and bottom water-temperatures at points upon the rivers, lakes, and seacoasts are observed and reported for the United States Commissioner of Fish and Fisheries, with a view to ascertain the proper waters in which to plant the various food-fishes and furnish statistics desired for the development of the national system of pisciculture.

There is also to be mentioned the oversight given by the office to the changes of temperature by which the canals are closed by freezing, or opened by thaws for transportation. During the months when the market-rates and freight-schedules are affected by the probabilities of the canals closing, and when these waterways are thronged with hundreds of laden barges, the daily predictions indicate the thermometric conditions likely to ensue along their lines of transit. Such information may often protect the public from the imposition of excessive railway-rates in the shipment of the grain-crops, especially in any autumn season of protracted mildness, and effect a large saving to the mercantile world.

The Cautionary Storm-Signals, which accompany the "Synopsis and Indications" issued to the press three times each day, constitute a very important part of the Signal Service work; and it was the possibility of preparing such storm-warnings for the benefit of navigation that originally gave the chief stimulus to the establishment of a Weather Bureau. The United States has a double front with over 7,000 miles of sea-beaten coast, exclusive of the shore-line of its great lakes, ravaged by terrific tempests; and this vast stretch of marginal territory needs to be environed with stations from which observations can be taken, and premonitory intelligence of cyclone and anticyclone signaled by day and by night to storm-menaced shipping. If no other duty devolved upon the Service, this alone would more than justify its whole cost, and warrant its extension. It is one of the most difficult and responsible tasks which can fall to the meteorologist, to put his science to its utmost

FIG. 1.

FIG. 2.

SIGNAL SERVICE RIVER-GAUGE.

the earth, the mean level of the river or "benchmark" is marked on it as zero, and it is carefully graduated in feet and inches by means of an upright measuring-rod (B), a straight-edge and spirit-level crosswise, as shown by the dotted lines (C) in the cut, each foot and its subdivisions exactly corresponding to the vertical foot and subdivisions of which they are intended to be indices. A "danger-line" is marked on the gauge, showing how far the water may rise, but no farther, without danger of a flood. The reports telegraphed to the press, stating how near each stream has risen to or fallen below the "danger-line," enable the public to predetermine dangerous inundations, and furnish steamboat-men and merchants the daily information requisite for intelligently directing the movements of their craft. During the flood-months the tele-

stretch of accurate prevision (and often it must be done with a very few minutes for deliberation) to decide at what points on the coast the storm-wind will strike with dangerous effect. It is practically fatal to the value of his warnings if they are found to be superfluous, since in that case they cease to command the attention of seamen. Nor, for like reason, must they be displayed too late; nor yet too early, lest they should interfere with the movements of vessels which might run out of the dangerous vicinity before the storm can reach them. Thus the perplexing questions which spring up at every display of the signals lend to this part of the Service duty the intensest interest. No such work had ever been undertaken in this country when the Signal Service was organized; and though maritime storm-signaling on a small scale had been tentatively prosecuted in England by Admiral Fitzroy, his labors were held by his own Government of questionable success, and at his death in 1866 the experiment had been abandoned by it as premature, if not utterly hopeless.

On the organization of the United States Weather Service in 1870, the Chief Signal Officer began with great caution to prepare for this difficult and delicate part of his arduous task; and on the 24th of October, 1871, the display of signals on the seacoasts and lakes commenced. The order regulating this dis-

play contemplated that the warning should be sent only to stations at which a storm-wind having a velocity of twenty-five miles an hour would occur. As the anemometer at every station registers the wind's velocity for every hour, it is easy to ascertain whether any signal has been justified. Every such display is carefully followed up by the office, and the result—"justified" or "not justified"—is recorded, as reported by the observers hoisting the signals by telegraphic order from the Chief Signal Officer.

The cautionary signals are of two kinds: 1. Those premonishing dangerous winds to blow from any direction; 2. Those premonishing off-shore winds, likely to drive vessels out to sea. Both kinds are needed by mariners as the storm-centers approach or depart from a maritime station. The first, distinctively termed the "Cautionary Signal," consists of a *red flag* with a *black square* in the center, for warning in the daytime, and a *red light* by night. The second, or "Cautionary Off-Shore Signal," consists of a *white flag* with black square in the center shown above a red flag with square black center by day, or a *white light* shown above a red light by night, indicating that, while the storm has not yet passed the station, and dangerous winds may yet be felt there, they will probably be from a northerly or westerly direction. The display of

THE CAUTIONARY SIGNAL-FLAG, AS SEEN IN NEW YORK HARBOR.

either signal, however, is always intended to be *cautionary*, and calls for great vigilance on the part of vessels within sight of it.

The Chief Signal Officer's report for the year ending June 30, 1879, states that, in that year, 2,573 such signals had been displayed in anticipation of 96 dangerous storms assailing the lake and ocean coasts of the United States;

and that of the number of "cautionary" signals displayed, 79.8 per cent. have been afterward reported as justified by dangerous winds; while of the number of "cautionary off-shore" signals displayed, 93.9 per cent. have been afterward reported as justified. According to the rules of the office, a signal is set down as not justified unless it is shown after the dis-

play that storm-winds exceeding twenty-five miles an hour in velocity have occurred at the display-station or within a radius of one hundred miles.

The total number of seaports and points on the lakes and seacoasts where the storm-signals are hoisted now is *one hundred and eleven*. The points whence storm-signals are displayed, however, are only those of the maritime margins of the field of research. The network of the Signal Service stations now extends over the continent from the Atlantic to the Pacific coasts, and the intervening territory from the Gulf to the Canadian frontier, and is in receipt of daily telegraphic intelligence of the weather from the Canadian Dominion and its outlying posts. The office work is still hampered for want of more stations in the interior and Northwest; but it is thought provision will ere long be made for supplying them, as a new trans-continental telegraph-line is carried from Minnesota to the shores of the Northern Pacific.

Sunset Stations.—In this connection it may be as well to add that, besides the regular stations reporting by wire thrice daily to the office of the Chief Signal Officer, "sunset stations," as they have been called, have also been established. By careful study of the condition of the sky at sunset, especially on the interior plateau, it was believed an advance could be made toward a simple method of predicting the next day's weather, within the grasp of any unscientific but intelligent observer. The observers at the sunset stations note whether the western sky at the precise time of sunset is "fair," "foul," or "doubtful," and from these observations with others (instrumental) they make predictions for the ensuing day. Some of these observations are roughly spectroscopic, the sunset report being based in part on such different appearances of the sun and the effects produced by his rays as are caused by their passage through differently conditioned atmospheric media. The sergeants of the Signal Corps practiced in this kind of forecasting have acquired considerable skill and accuracy in predetermining the local weather-changes; their forecasts, as computed in the Chief Signal Office, having reached a percentage of 82·6 of correctness for trans-Mississippi districts, where the meteorological conditions are most constant, and 81·6 for the region east of the Mississippi Valley. "There can be no reason," says the Chief Signal Officer, "why any intelligent farmer, supplied with the necessary simple instruments, habituated to similar observations, and furnished with data, should fail to attain an equal accuracy."

Private Forecasts.—To facilitate such private forecasting, especially by the agriculturists of the great West and the interior plateau, the Chief Signal Officer has caused to be prepared the "Weather-Case," or "Farmer's Weather-Indicator," before mentioned. This instrument is very simple, and when thoroughly tested, and by aid of the accompanying rules

for using it, it is hoped agriculturists and persons of ordinary education will find it possible to determine for themselves in advance the character of the weather from local indications. At isolated places, where the official reports can not be had, the diligent practice of such forecasting would probably in a short time afford good results. It is to call into play the intelligence of the popular mind and train it in the highly utilitarian work of private prognostications, as well as to explain its own forecasts, that the Signal Office issues a "Synopsis" of the weather-data with every bulletin of "Indications." That the farmer and seaman may know the changes going on each day, and acquire the habit of tracing the sequences of meteorological phenomena, the "Synopsis" is invaluable. Most of the newspapers print only the "Indications," and omit the "Synopsis"—a practice to be greatly regretted. The late Professor Smee, F. R. S., one of the most gifted and practical of modern scientists, was much interested in the storm-signals hoisted on the English coast by Admiral Fitzroy. After much personal intercourse with the English fishermen, and close inquiry into the use made of Fitzroy's "warnings" among the humble coasters, he recommended that "the reasons for hoisting the signal" should be communicated to the public, that those interested might study the official warning in its local applications. The Signal Service has always encouraged the private study and intelligent local application of its press-reports, and expects those who use them to consult their own barometers and other instruments, and to examine the local signs of the weather, as clouds, etc., with the view of giving greater efficacy to its necessarily brief telegrams. Its plan is, not to deliver oracular and dogmatic statements to the people, but to guide them rather to meteorological knowledge as it is daily needed.

In the execution of the last-named plan, the "Daily Graphic" of New York publishes every twenty-four hours a reproduction of the Signal Service weather-map, showing the cyclonic, anti-cyclonic, thermometric, wind, rainfall, and other conditions prevailing over the country at the time of going to press. These charts, according to a plan devised by Lieutenant H. H. C. Dunwoody, Acting Signal Officer and Assistant, are transmitted from the Washington office by telegraph. By this ingenious device, it is found not difficult to transmit to any city reached by telegraph—and by the common telegraphic instrument—such data prepared in the Chief Signal Office as will enable any newspaper to reproduce on its pages the official weather-map for the current period. Thus, the Signal Service weather-map for 1 A. M. of any day, precisely as charted then in the Washington office, can be telegraphed to Boston, Chicago, St. Louis, Indianapolis, or any other city, and published, in any size the editors may prefer, in the papers printed *that morning!*

The adoption of this method of popularizing and disseminating weather-knowledge, while the public interest in the data is fresh, will vastly extend the benefits of the Service in all sections of the country, and familiarize the

popular eye with the behavior and march of atmospheric phenomena.

To an untutored eye, it may seem trivial to dwell upon apparently slight changes in barometric and other conditions which are curso-

WAR DEPARTMENT WEATHER MAP—A DAILY METEOROLOGICAL CHART TRANSMITTED BY TELEGRAPH FROM WASHINGTON.

rily glanced at on the weather-map; but a moment's reflection shows the importance of accuracy. A fall of only *one tenth* of an inch in the barometer, trifling as it appears to be, indicates the presence of an enormous force. The normal atmospheric pressure, which is only 15 pounds upon a square inch, is 2,160 pounds upon a square foot, and this amounts to about 30,000 tons upon every square mile. With this pressure the column of mercury in the barometric tube is 30.00 inches high. When, therefore, it falls to 29.90 inches only, as any one may calculate, over 100,000 tons of pressure are lifted up and removed from every square mile over which the diminution of pressure extends. Conversely, if the barometer registers on its scale so small an increase of pressure as one tenth of an inch, it indicates the arrival of a new mechanical power exerting an additional force of 100,000 tons weight to the square mile. Such minute but common barometric changes, representing forces of great moment in the operation of the atmospheric machinery, must not be overlooked in the deductions of practical meteorology. But without the weather-map of simultaneous observations the presence and influence of such changes can not be detected and estimated.

Signal Service Instruments.—The necessity for accurate observations in a system of weather-telegraphy brings us to speak of the instruments employed by the Signal Service Corps. These have been selected from the best models known, and subjected to experimental tests to perfect their registrations. Every barometer, thermometer, or other instrument used at the stations undergoes thorough comparison with the highest standards before it is sent out from the office of the Chief Signal Officer, in which there is a large apartment devoted to the work of instrumental meteorology, known as "the instrument and model room."

The barometer is the great dependence of the meteorologist, and upon its faithful accuracy in registering the subtle yet momentous changes of atmospheric pressure he must chiefly rely. It measures the weight, at the spot where it is located, of a column of air having a diameter equal to that of its own tube. It has been in use since the beginning of the eighteenth century; but not until 1853, when Adie constructed a marine barometer, did it accomplish its work satisfactorily. Fortin's barometer, however, became the most satisfactory for *stations*, since it has the best cistern (having a flexible base with a glass cylinder), gets rid of some

errors, and is compactly put together. This barometer, as afterward improved by the Kew Observatory, and brought to the highest standard of effectiveness by Mr. James Green of New York, is the one used by the Signal Office at all its stations for obtaining the telegraphic data. The instrument is kept in a room of as

DIAGRAM OF PRESSURES IN A SECTION OF A CYCLONE.

uniform a temperature as practicable, and in a vertically suspended wooden box which can be closed when the observer is not taking observations. For purposes of comparison and the detection of any error, as well as to have a substitute in case of accident, two barometers are supplied to each station. Each instrument after it comes from the maker's hands is subjected to the Signal Office tests, and the residual errors are determined by comparison with the great standard barometer kept at the office, when a certificate of corrections is made out and attached to the instrument; it now becomes a *standard* itself. Its readings may deviate to a very slight extent from those of the "regulator"; but such deviations being known to a thousandth part of an inch, allowance is made for them whenever the observer makes his barometric report. As the elevation of the barometer above sea-level is determined for each station, the proper correction for that is also applied at each reading.

Great care is taken in the location, correction, and reading of the Service thermometers, which are of the highest standard. The instrument is placed in the open air, so situated that it will be always in the shade and yet have a free circulation of air around, but exposed to no currents of air, and beyond the influence of

any artificial heat. Its surface is also carefully protected and freed from rain or moisture of any kind, and its bulb so placed as to have no contact with the metallic scale or back. Every thermometer sent out to a signal-station undergoes several previous crucial tests, and is brought up to the standard kept in the instrument-room of the central office, where every error is corrected and recorded, and the character of the instrument fully studied. The maximum and minimum thermometers are likewise tested, and the slightest variations from the standard instruments determined by protracted experimentation, to the satisfaction of the office, before they are issued to the observers. These instruments, by constant and minute inspection of an officer detailed to visit all the stations, as also by the rigid scrutiny of the observers themselves, are kept up to the highest point of accuracy and precision. In the instrument-room of the Washington office, 1,105 meteorological instruments were last year carefully compared with the "official standards," and 982 were issued to the stations.

The rain-gauge employed is also constructed with the utmost precision, to register the amount of precipitation to inches and tenths of an inch. This instrument is placed with the top at least twelve inches from the ground, and where it will not be affected by local peculiarities or obstructions from any object near by, so that the rain as it descends from the clouds may be fully caught and measured. It is fixed firmly in a vertical position, and beyond the risk of being tampered with by unauthorized hands. The rain-water collecting in it is measured by a measuring-rod, graduated to inches and tenths of inches; snow is melted and then measured in the same way.

The wind-velocity measurer or *anemometer*, which up to the present time has been found the most satisfactory, is that of Robinson. It consists of four hemispherical cups revolving in a horizontal plane and communicating their motion to a vertical shaft or axis. In whatever direction the wind blows, these cups will always be driven round with their convex sides foremost, since the air presses with more effect into the cups than on their exteriors. Experiments have shown that the velocity of the cups in all cases equals one third of that with which the wind blows, no matter from what point of the compass it comes; and that this relation between the velocity of the cups and that of the winds is independent of the size of the instrument. By an arrangement of beveled wheels every revolution of the cups is made, through the shaft, to revolve a horizontal cylinder carrying a pencil, which marks on prepared paper the total number of revolutions made by the cups. As the distance traveled by the cups is three times that traveled by the wind, the velocity of the latter can be easily deduced.

SIGNAL SERVICE ANEMOMETER, WITH SELF-REGISTERING ATTACHMENTS.

The importance of accurate anemometers was recently illustrated in the storm which overwhelmed the Tay Bridge in Scotland, carrying a passenger-train into the tempest-lashed Firth with instant and total destruction; an accident which, in the judgment of many, would never have occurred had the bridge-constructors and railway authorities possessed anemometric instruments showing the real velocity and force of the gale. In some American storms the wind has been found to blow with the tremendous velocity of from 100 to 138 miles per hour; and it is difficult to find or frame an anemometer which, while delicate enough to register small disturbances, will be strong enough to stand the force of such hurricanes. But the experiments of the Signal Service, it is hoped, will lead to some instrumental improvements in this direction.

But the great question, as respects instruments, with which the Signal Service has been concerned, is to obtain barometers, thermometers, etc., which will be self-recording, and give without manipulation continuous, exact, and graphic registers of the atmospheric fluctuations. Numerous ingenious contrivances of this kind—as Hough's electric meteorograph

and printing barometer, Wild's barometer, and Gibbon's barograph—have been for years under careful testing by the office, with the view of securing forms adapted to general use on stations, and also to obtain an instrument so fitted with apparatus and electric wires attached that its action at a remote point may be automatically registered on paper in the Washington office. Although much has been done to settle this question, it is yet unsolved, and it awaits further experimentation.

The International Weather Service.—This novel and vast extension of the national work done by the United States weather service is perhaps the most remarkable practical result of the development of modern meteorology. Previous to the introduction of the system of "simultaneous" weather-reports by General Myer in 1870, no observations were taken in any country that could be strictly called synchronous, suitable for the preparation of synoptic weather-charts, or that could be regarded as strictly inter-comparable; but, in each country where weather-reports on a large scale were made, they were prepared from daily ob-

servations made at moments of time more or less widely separated. Under the old observational methods, concert among the nations in meteorological work was practically out of the question. Not until the new method of simultaneous observations had been put to the test, and a feasible system devised in which all nations could cooperate, was it possible to combine their investigations of the weather into one grand and uniform scheme, for the purpose of observing the aerial envelope of the globe as a unit. To do this required not only a uniformity in the instruments employed, but also a simultaneity in the hours for reading the instruments; that is, that weather-observers all round the globe should take their observations at *one and the same fixed moment of physical time*. The organization and successful working of a weather bureau upon such a simultaneous system in the United States prepared the way, however, for an international weather service. Accordingly, when in September, 1873, an International Meteorological Congress was convened at Vienna—an assemblage composed of the official heads of the meteorological bureaus of the different powers—an original proposition was made by General Myer, as the Chief

Signal Officer of the United States Army, looking toward a world-wide scheme of weather-research. General Myer's proposition was to this effect: "That it is desirable, with a view to their exchange, that at least one uniform observation, of such character as to be suited for the preparation of synoptic charts, be taken and recorded daily at as many stations as practicable throughout the world." The author of this proposition had in his report to the United States Congress in 1872 expressed a desire for such a cosmopolitan work—"a grand chain of interchanged international reports, destined with a higher civilization to bind together the signal services of the world"; and the Vienna conference now responded to his overture with alacrity. As well might the United States or Great Britain seek to unravel the mysteries of the Gulf Stream by surveying only that portion of the great ocean-current which impinges on its own shores, leaving unobserved its sources in the equatorial Atlantic and its northeastward deflection from Newfoundland, as to expect to master the mysteries of the atmospheric ocean by studying only the winds and storms which sweep over its own national bounds. The atmosphere is a *unit*, and to be understood must be studied as a unit. The storms which pass over us all have their "polar" and "equatorial" air-currents; and, to comprehend the forces which conspire to make a single cyclone, we must extend our investigations far beyond our own territorial limits.

The adoption of General Myer's proposition by the Vienna Congress, and the courteous co-operation on the part of all the leading governments of Europe, soon enabled him to collect materials for laying the foundation of the international research. Rapidly expanding in 1874, the exchange of simultaneous reports became numerous enough to admit of making a daily "International Weather Bulletin and Chart"; and on July 1, 1875, the Signal Office at Washington commenced the daily publication of the "International Bulletin," presenting the tabulated results of simultaneous weather-observations from all the coöperating nations and from the oceans. These reports are intended to cover the combined territorial extent of Algiers, Australasia, Austria, Belgium, Central America, China, Denmark, France, Germany, Great Britain, Greece, Greenland, India, Ireland, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Portugal, Russia, Spain, Sweden, Switzerland, Tunis, Turkey, British North America, the United States, the Azores, Malta, Mauritius, the Sandwich Islands, South Africa, South America, and the West Indies, so far as they have been placed under meteorological surveillance; and also the great ocean-highways, from which the ships of all flags take observations while *en route* from port to port.

As early as July 1, 1878, in connection with the daily "International Bulletin" issued by the Washington Signal Office, General Myer

began the daily publication of a graphic synoptic "International Weather-Map." This chart covers the whole international network of observations, and is the supplement and key to the daily bulletin, both being based on the same data, and both of the same date. The "International Weather-Map of Simultaneous Observations" (see map opposite) exhibits the aerial phenomena as they actually existed all around the earth at a fixed moment of time; it is, so to speak, a *photograph* of the atmospheric machinery, picturing its varied movements and delineating its component parts and elements, so as to represent it as a *whole*—the desideratum of science in all ages. In carrying out this international coöperative enterprise, the Signal Office, by an order of the Secretary of the Navy, receives the daily simultaneous reports from all vessels of the United States Navy, and has the coöperation of the Pacific Mail Steamship Company's vessels, as also that of the White Star Line, the Occidental and Oriental Steamship Company, the North German Lloyd, the American Steamship Company, the Red Star Line, the Allan Line of steamers, and others, whose contributions swell the daily international reports to over five hundred in number. The daily bulletins and charts prepared from the collective data are mailed to every coöperating seaman and civilian observer without charge, as an acknowledgment of his service to science, and constitute in themselves an invaluable meteorological library. In the cases of all maritime observers, the Signal Office bears all expenses for forms, postage, etc.; and when necessary it furnishes the shipmaster with the requisite instruments. The number of observations now made by separate vessels at sea is 122, and all ocean-going vessels are requested to embark in this system of research. As a striking illustration of the opportunities which a vessel at sea has for aiding in this meteorological work, it may be mentioned that the steamship Faraday, when laying the last Atlantic cable, encountered a severe cyclone in mid-ocean, which, without heaving to, she reported by her telegraphic wire to Europe, noting the successive changes of wind as the different quadrants of the storm passed over her; thus indicating to those on land the direction and progressive velocity of the gale, so that they could calculate the time and locality at which it would strike upon the European coasts. If, as General Myer holds, it is practicable to establish floating stations in mid-Atlantic, connected by cable with the continent, the reports from such posts would be of incalculable value to British and continental meteorologists in making out their daily weather-forecasts and ordering storm-warnings for their seaports.

The United States is the geographical theatre upon which cyclopean aerial forces of arctic, tropic, and Pacific origin play their mighty parts in the ceaseless conflict, the vicissitudes of which give us the alternations and extremes

PUBLISHED BY ORDER OF THE SECRETARY OF WAR.

Chief Signal Officer, U. S. A.

Data, as appearing in the International Bulletin of similar date.
 Isobars, *full lines*, exhibit atmospheric pressure at sea-level, and are charted from data as reported by the several observers.
 Isotherms, *dotted lines*, exhibit temperature of air, similarly charted.
 Broken lines indicate that the lines so broken are doubtful.

of heat and cold, drought and precipitation. The issue from the Signal Office of the "International Map of the Northern Hemisphere" has widely extended the field of view. Professor Loomis, Professor Henry, and many other scientists had pointed out the necessity for extending the scope of the Signal Service observations beyond the national territorial boundaries, if

we are ever to learn the secrets of our national meteorology. The proposition of General Myer at Vienna, in 1873, having that end in view, was that observations be taken daily and simultaneously at as many stations as practicable "throughout the world." A recent meteorological conference at Hamburg recommended a concert of all nations for

AN ANTICYCLONE, OR WAVE OF HIGH BAROMETRIC PRESSURE FROM THE NORTHWEST.
(Large arrow shows direction of its progress; small arrows show its winds.)

planting a cordon of weather observatories in high northern and southern latitudes around the poles. Indeed, there is scarcely a problem relating to the physical geography and meteorology of our own country which can be fully solved without recourse to more extended investigations outside of the United States. The international weather service, we may therefore say, is the great hope of the meteorology of the future.

In addition to the daily international charts published by the Chief Signal Officer, he has begun the issue of *monthly international charts* of the northern hemisphere, displaying the monthly ocean-storm tracks, the average lines of equal barometric pressure, the wind-zones, isothermals, etc. These charts are published in the "Monthly Weather Review," a journal sent to all observers, on land and sea, who co-

operate with the Signal Office in its international research. To aid shipmasters of every flag in keeping their instruments correct, the Chief Signal Officer has also placed standard barometers at the ports of New York, San Francisco, and elsewhere, for reference and comparison. Without pecuniary charge to foreign or American ships, their barometers, on application to the signal offices at these ports, are carefully tested, adjusted, and corrected for effective use at sea.

With the extension and collation of the international weather-reports, we may hope, as General Myer has said, that "the questions as to the translations of storms from continent to continent, and of the times and directions they may take in such movements; the movement of areas of high and low barometer; the conditions of temperature, pressure, etc., existing

around the earth at a fixed instant of time; as well as questions of climatology and others bearing upon the prediction of weather-changes far in advance of the time at which these changes happen, or queries as to the character of coming seasons, may be settled." If the Signal Service undertook no other duty, but, discarding prognostications, limited its scope of researches to this international collection of materials for the construction of the sciences of meteorology and climatology, it is not too much to say that the harvest of observational data thus garnered would ultimately be worth all the labor and expense the Service has cost the Government. But, to secure such results, it can not be too widely or urgently insisted on that navigators, ship-owners, steamship companies, and all naval officers should use their earnest efforts and influence to obtain simultaneous weather-reports from all sea-going steamers and sailing vessels. The ablest scientific journal of Great Britain, "Nature," recently said that it "earnestly hopes that the navies and the mercantile vessels of all nations will soon join in carrying out this magnificent scheme of observations, originated by the Americans in 1873, and since then further developed and carried on by them with the greatest ability and success." Sentiments similar in effect were expressed at the International Meteorological Congress convened in Rome, Italy, in April, 1879.

The *Coast Signal Service* is another important arm of the organization. By act of Congress, the Secretary of War was authorized to establish signal stations at the lighthouses and life-saving stations on the lakes and seacoasts, and to connect these signal stations with telegraph-lines, to be constructed, maintained, and worked under the direction of the Chief Signal Officer of the Army; and the use made of the life-saving stations is subject to such regulations as are fixed upon by the Chief Signal Officer, the Secretary of War, and the Secretary of the Treasury. By this coöperative arrangement, the Signal Service has become a valuable if not an indispensable auxiliary to the sister services with which it connects, and shares very materially in the labors and responsibilities especially of the Life-Saving Service.

The coast signal stations aim to warn vessels within signaling distance of the approach of storms, and to give the life-saving stations quick notice of marine disasters calling for rescue, as also to furnish any intelligence to the latter, or to the lighthouses, which may insure their more efficient working. Connected by wire or submarine cable, as all the signal stations on the coast are, from Sandy Hook, N. J., to Smithville, N. C., and connected similarly with the office of the Chief Signal Officer at Washington, whence they are kept advised of any change in the meteorological status, they are thus enabled, from their full ocean view, to communicate directly any warnings from

the Chief Signal Officer to passing ships, or to convey to him any facts which may be of use to the Washington office. The telegraphic wires connect each station with the War Department. The weather reports and observations on the indications of the sea thus obtained are often of the greatest value to the Washington office in its work of preannouncing the force, direction, and velocity of the great hurricanes from the West Indies, which impinge upon our Atlantic seaboard and sweep the sail-whitened waters on the eastern side of the United States.

As an illustration of this, it may suffice to note the *ocean conditions* which the Coast Signal Service telegraphs to the Chief Signal Office thrice daily, and oftener if need be. It has long been known by meteorologists that marine cyclones foreannounce their movements by a storm-wave formed in the central part of the barometric depression, where, the attenuation of the atmosphere being much greater than on the outer circles, the circumferential pressure serves to head up the water of the sea. "When living on the Bermuda Islands," says General Reid, the eminent investigator of storm-phenomena, "I was frequently interested by observing the change of direction in the surf beating against their shores. A coming storm would roll its undulations so as to break upon the south and southwest side of these Atlantic islands; and, as gales proceeded northward, the sea was seen breaking on their northern reefs." The "cyclone-rollers," as Piddington observed, may be "felt at a great distance from storms"; and, as he shows, even a slip far out at sea, if her commander will carefully note the swell of the ocean, may be forewarned of an approaching gale. Both of these investigators give abundant evidence that the peculiar ocean-swell "is often felt at 10° or 15° (600 to 900 miles) of distance" from the tempest. In the summer of 1873, when the great August hurricane which so furiously assailed and wrecked several hundred sail, was still passing over the Bermudas, its long dead swell was outrunning its center by 600 miles, driving in the bathers at Long Branch and pouring into New York Bay. The steamer *Albemarle* encountered its forerunning wave on her voyage from Halifax to the Bermudas; and, though the morning was fair, suspecting danger, the vessel was hove to for a few hours to examine the swell. Concluding that the hurricane was advancing directly upon him, her captain changed his course from southerly to westerly, and by a slight *détour* eluded the gale. As one by one, yet all independently, the coast signal observers on any day telegraph to the central office the same significant tidings of the ocean-indications of an Atlantic gale—the intensity and direction of the swell—their concurrent observations often present unmistakable proofs of the presence, course, and progressive rate of these menacing meteors. The intelligence thus afforded is indispen-

sable to the storm-warning and weather-prediction work of the Washington authorities.

But, apart from the meteorological value of such a Coast Signal Service, its incidental contributions to the life-saving stations have already proved of the greatest assistance. On the 22d of March, 1877, after a severe storm on the middle Atlantic coast, Sergeant William Stein of the Signal Service, in charge of the Cape Henry station, discovered before dawn a large vessel stranded on a shoal off that station, and summoned the wreckers at Norfolk to come to the rescue. With the earliest light the Sergeant displayed the "attention-flags" of the international code, with which every seacoast signal station is supplied; and, receiving answer that she was the Winchester of Liverpool, with request for two steam-tugs to be sent to the vessel, he telegraphed at once to Norfolk for wrecking-steamers. Before sundown active efforts were made to save the stranded vessel. She was gotten off the shoal

after some days' labor; but meantime three other vessels, in a second storm (of the 25th), were stranded within a mile of her. Sergeant Stein again telegraphed the wreckers at Norfolk for aid. He ascertained the name of the bark in greatest peril to be the Pantzer, a Norwegian vessel, and the crew of the Life-Saving Service a little later succeeded in firing a life-line over her deck. The Norwegians did not comprehend its use; but after some effort the Signal Service officer, by means of international signals, instructed her crew to "haul in on the line," and by nine o'clock all the crew of the Pantzer were safely landed. In the wrecks of the steamships L'Amérique, Rusland, and Huron (of the United States Navy), the first tidings were conveyed by the Signal Service wires, and through them succor was speedily summoned. In the case of the Huron, drifted ashore near Kittyhawk, a private of the Signal Service, A. T. Sherwood, stationed at that place, received the first intelligence November

THE SIGNAL SERVICE STATION AT CAPE HENRY SIGNALING TO THE STRANDED BARK PANTZER.

23d, and, after telegraphing to Washington, hastened to the awful scene, walking sixteen miles through the sand, and brought full reports of the situation to his station, which were instantly telegraphed to the Chief Signal Officer. The War and Navy Departments and the Life-Saving Service were thus notified, and by them steamers of the navy and wrecking companies were started to the fatal point of the shore on which the Huron had gone to pieces. The Kittyhawk observer, immediately on receiving orders from the Chief Signal Officer, opened a "wreck-station" abreast of the foundered vessel before daylight of the 23th, connecting it by a temporary telegraph-wire with his station, and, working this improvised station on the open beach, while the gale was yet raging, drew toward the spot the whole organized relief force of the Government. A similar service was performed on the

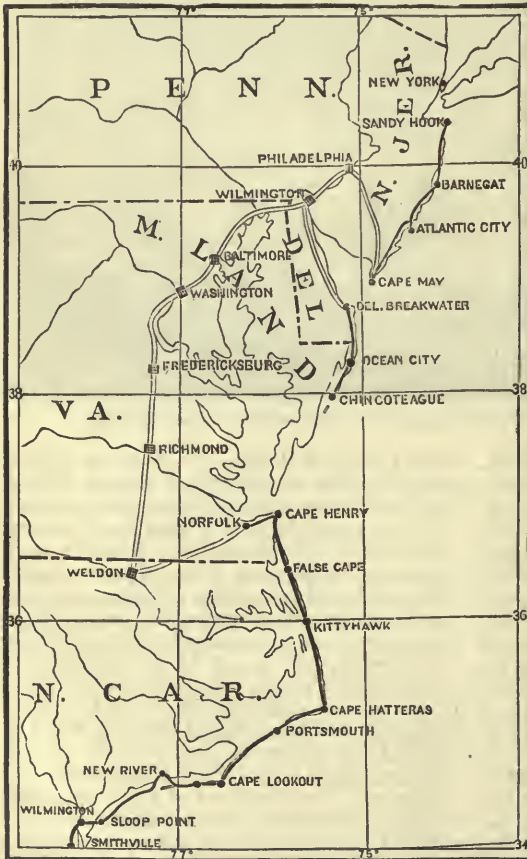

stormy night of January 31, 1878, by another private soldier of the Signal Corps, William Davis, when the steamship Metropolis, with 248 souls on board, became a total wreck twenty miles from Kittyhawk station. At 6.55 p. m. on that night intelligence of the disaster reached Kittyhawk, and in less than fifteen minutes private Davis, carrying telegraphic and signal apparatus, was riding through the night and storm to the scene. By 4 a. m. he had reached the vessel, established his telegraph station abreast of her, opened communication, and forwarded a report to the Chief Signal Office at Washington, and was putting in motion all the machinery of relief and succor which the country could command. The observers of the coast signal stations, whenever it is practicable, board vessels that have gone ashore, and open communication with the land. An instance of this may be cited from the action of private Harrison of

the Signal Corps, at Cape Henry, when the bark Giuseppe Massonne was wrecked near that station, February 10, 1878. His presence prevented the crew from deserting their ship, which, by the aid of powerful wrecking steamers, was subsequently saved. Other instances of boarding vessels could be cited, as those of the Italian bark Francesco Bellagamba and the British steamship Antonio, both boarded by Signal Service men who afterward kept up signal conversation with the shore until the ships were saved. But these cases will suffice to show the immense share the Coast Signal Service has in the results announced by the Life-Saving Service. Without the Signal Service cooperation, the latter would often, in emergencies that arise, be powerless to command the needed help, as well as to communicate with stranded vessels. For the latter service, only men drilled in signaling can avail.

So arranged is the Coast Signal Service, that not only are its storm-flags and danger-warnings visible by vessels moving off the coast, but even a vessel *en voyage* (say one which is bound from the equator to New York), as she

passes Cape Henlopen, may inquire by signals whether any hurricane is impending; if so, whether she has time to reach Sandy Hook before its arrival, or must take shelter behind the Delaware Breakwater. Or, a vessel bound from New York or any northern port southward, on reaching the Capes of the Delaware, can make inquiry as to whether any storm is likely to strike her before she can pass Cape Hatteras, and receive full advice by telegraph from the Chief Signal Office at Washington, in a very brief time. With adequate appropriations, this Coast Signal Service could easily be made of far greater value to all the shipping and mercantile interests. As the Chief Signal Officer has said, "The time is not far distant when the possession of a coast not covered by seacoast storm-signal and Signal Service stations, watching as sentinels each its own beat of sea and shore, and ready to summon aid by electric wires, will be held as much an evidence of semi-barbarism, as is now among civilized nations the holding of any national coast without a system of lighthouse lights." In the event of war, with a completed chain of coast signal stations, no part of our exposed sea-front could be threatened without immediate intelligence of the fact being flashed to the Washington office and all along the coast, and the defensive power of the Government concentrated at the point endangered. The chain of telegraphic seacoast stations at present is 610 miles long, stretching from Sandy Hook to the mouth of Cape Fear River.

The Signal Service Telegraph System. constructed, owned, and operated by the Signal Service, covers, however, a much larger area than the seacoast mentioned. In pursuance of acts of Congress, this service has now completed in the interior and upon the frontier an extensive network of telegraphic lines for connecting military posts, with a view to the protection of the population from Indian depredations, and the rendition of meteorological, military, and other reports to the Government. A total length of 4,000 miles of frontier line is now operated and maintained by the Signal Corps. This connected system of telegraph-lines is one of the most effective safeguards against Indian raids and warlike movements, since it enables the scattered military forces of the United States to obtain timely notice of such movements, and to concentrate quickly at any threatened point to repel attack. The Indian strategy is to pass between the Government army posts unobserved, so that their plans may not be reported—a very difficult thing in a region traversed by electric wires. To break them is to announce their purpose and betray themselves, alarming the posts and settlements on

SIGNAL SERVICE SEACOAST TELEGRAPH LINES.

both sides of the break, and evoking spirited pursuit and severe punishment by the troops. As an engine of civilization the frontier telegraph rivals the railway, enabling the Government to throw an ægis of protection over the rapidly expanding wave of Western emigration, and thus facilitating no doubt the sale and settlement, as well as the material development, of the public lands. These Signal Service lines are in part self-supporting, as they transmit not only Government but private telegrams of the civilian population, and save the expense of telegraphing by other lines the meteorological reports necessary for the weather-work at Washington, besides serving to convey a great number of official dispatches and correspondence for various departments of the Government, that would otherwise have to be transmitted at considerable cost on non-governmental lines or sent by couriers.

But, apart from all the incidental benefits and economies wrought by this frontier telegraph system, its value in the scientific work of the Weather Bureau proper is felt to be the greatest. The lines in Texas have made it possible to furnish weather-reports daily on the coast of that State; and those in the Northwest permit a series of observations and reports not otherwise attainable, which are of the first importance for all purposes of weather-prediction throughout the United States. Meager as the data now obtainable from the Northwest are, they are indispensable for the processes of weather-telegraphy in the Mississippi Valley and lake region. To study these momentous meteorological agencies, and to receive timely notice of their arrival on the *extreme north-western* frontier, is perhaps the most important task, so far as weather-prognostication goes, that the Signal Service could pursue. The extension of its telegraphic and observational stations in this direction would immensely enhance its general effectiveness, and give a fresh stimulus to almost every meteorological investigation which the Service is now pushing.

The length of Signal Service telegraph-lines in the interior and on the frontier at present is as follows: Arizona Division, 934 miles, with 17 stations, from 12 of which weather-reports are received at Washington; New Mexico Division, 486 miles, with 12 stations, from 6 of which reports are daily received; Texas Division, 1,590 miles, with 28 stations, 25 of which telegraph full meteorological reports; the Northwestern Division, 921 miles, with 18 stations; and the Washington Territory Division, 69 miles, with 2 stations; total, 4,000 miles, with 77 stations.

In concluding this necessarily much condensed sketch of the national weather service, its pressing wants should not be overlooked. No other service appeals so strongly to the interests which it daily subserves for intelligent coöperation. The public press can do much to advance its development by systematic republication and explanation of its observations and

deductions, and especially by reproducing the data furnished in its "Monthly Weather Review," and in the daily telegraphic "Synopsis." Time and toil are necessary to harvest the fruit of seeds sown; but, as the President of the American Geographical Society, Chief Justice Daly, has said, "Nothing in the nature of scientific investigation by the national Government has proved so acceptable to the people, or has been productive in so short a time of such important results, as the establishment of the Signal Service Bureau." Like a little army, however, which has fought its way to a commanding yet difficult position, its ranks must be recruited and its resources be augmented before it can push its conquests forward or reap what it has sown.

SOUTH CAROLINA. By a letter dated February 24, 1879, addressed to Lieutenant-Governor Simpson as acting Governor, Wade Hampton resigned his office of Governor of South Carolina. On the 26th W. D. Simpson was formally sworn in and installed as Governor of the State. On the same day Governor Simpson commissioned Mr. Hampton as United States Senator from South Carolina, to which office the two Houses of the Legislature at the November session of 1878 had elected him by a unanimous vote.

For the regular session of 1879, the Legislature met at Columbia on November 25th.

On December 10th the two Houses convened in joint assembly to elect an Associate Justice of the Supreme Court in the place of A. C. Haskell, who at the beginning of that month had resigned. The candidates were Samuel McGowan of Abbeville and W. D. Wallace of Union. Mr. McGowan was elected by a majority of three, the vote having stood 76 and 73 respectively. The joint convention then proceeded to ballot for the election of a Chief Justice of that Court for six years. Henry McIver, one of the two Associate Justices, was unanimously elected, having received all of the 146 votes then cast. On December 15th Judge McIver declined the office, and the two Houses met together again on the 18th. Governor Simpson received 131 votes, the whole number cast, and was elected. In regard to the vacancy of this seat as occurring in 1880, there is a decided disagreement between its present occupant, Chief Justice Willard, and the State Legislature. He was elected by the Legislature of 1877 upon the office becoming vacant by the death of Judge Moses; and while the Legislature of 1879 was formally electing his successor, he plainly declared, as he has also done since, that no vacancy of his office is to occur in 1880; that he was elected in 1877 for the full term of six years; that the Legislature, according to the State Constitution, has no legal power to elect his successor before the expiration of his sexennial term; and that he is determined to keep his seat after August 1, 1880, leaving to the now elected Chief Justice the task of dispossessing him of it on a writ of

quo warranto. On the other side, it is stated that at the time of his election in 1877 "the understanding and intention of those who elected him was to elect him for only the three unexpired years of the term of Chief Justice Moses, ending August 1, 1880," and that he accepted the position on that understanding.

The Legislature of 1879 closed its session on December 24th, having passed about two hundred acts and joint resolutions, among which are the following:

"An act to extend the time for the redemption of forfeited lands."

"A joint resolution proposing an amendment to the Constitution of the State relating to the homestead, and providing for the benefits thereof to be shared equally by all classes of citizens." It provides for a homestead not exceeding one thousand dollars in value to every citizen in possession of land; and for an exemption of five hundred dollars' worth of personal property, and the crops and products of the said land; with an amendment extending the exemption of the said amendment to any married woman who is not the head of a family and owns a separate estate, while the head of the family does not.

"An act requiring railroads to furnish consignees an itemized statement of freight charges, and to settle according to the bills of lading."

"An act to prohibit the running of freight trains, and to regulate the running of passenger and mail trains, on Sundays."

"An act to prevent and punish the intermarrying of races."

"An act to enforce the use of a uniform series of text-books in the free public schools of this State."

"An act to provide artificial limbs for all soldiers of the State who lost their legs or arms during military service in the years 1861, 1862, 1863, 1864, and 1865."

"An act to raise supplies and make appropriations for the fiscal year commencing November 1, 1879." In the engrossment of this act two grave mistakes occurred, both in the second section, which were discovered when it was too late to correct them. As passed by the two Houses, the act orders the levy of a State tax of four and a half mills on the dollar; as ratified and published, it orders the levy of a tax of four and three quarters mills. It also makes provision for the Charleston military organization, which had not been agreed to by the House of Representatives.

"An act to continue in force an act extending the time for funding the unquestioned debt of the State."

The settlement of her questioned debt has been provided for by another act, which is considered the most important of the session of 1879, as it finally and for ever determines a matter which has long kept the creditors and citizens of South Carolina in great anxiety. In 1873 the State sifted all her outstanding obligations of every denomination, amounting in the aggregate

to about eighteen million dollars, threw out six millions of them altogether, and proposed as a compromise to recognize one half of the remaining twelve millions, or fifty cents in the dollar, as valid, to be funded and bear interest payable at stated times thereafter, thus reducing her entire debt to about six millions. This was sanctioned on her part by a law enacted at that year's session, known as the funding or consolidation act, entitled "An act to reduce the public debt of the State, and to provide for the payment of the same. Approved December 22, 1873." This compromise was accepted by the State's creditors, was for the most part executed during the subsequent years, and was regarded generally as a final settlement. In 1877 the Legislature appointed a special committee "to investigate the public debt of the State." This committee presented to the Legislature of 1878 a detailed report of its labors, declaring about \$1,800,000 of the said consolidated debt not valid, either totally or partially, as tainted with fraud, or resting on vouchers not issued in accordance with the law. This report was decidedly opposed by a large number of the members, who insisted on the inviolability of the consolidation act, and as decidedly favored by a larger number, who stood for rejecting the fraudulent or illegal portion of the funded debt. To prevent a split in the Democratic party, which seemed imminent, a compromise was finally agreed to by referring the whole matter to the decision of a special court consisting of three Circuit Judges, with the right of appeal from it to the Supreme Court of the State, and to the Supreme Court of the United States. This special court, commonly styled "the Bond Court," was then created, and its members designated by a law enacted for that purpose. Cases embracing all classes of State bonds were made up and duly argued before this Court, which decided some of them, as did also the State Supreme Court on appeal on September 27th, establishing rules for determining whether, how far, and for what reason any State obligation is null and void, according to the State Constitution. At the meeting of the Legislature in November, 1879, the previous year's disagreement concerning the rejection of a portion of the consolidated debt was renewed among its members, so that a proposition to abolish the Bond Court was introduced and barely defeated, the vote being 52 to 57 in the House of Representatives and 16 to 16 in the Senate. All contention was at last ended apparently for ever by the passage of the law before mentioned, entitled "An act to provide for the settlement of the public debt of the State in accordance with the decision of the Supreme Court of South Carolina." It creates the office of a Special Commissioner, and appoints James O. Colt as such. His duties are to examine the outstanding obligations of the State under denominations pointed out in the act, and ascertain the validity, total or partial, of each, in accordance with the princi-

ples laid down by the Supreme Court of the State in the decision of the cases referred to by the act, and, if any obligations are found partially invalid, to ascertain the exact amount of their valid portion, and compute the interest accrued on it up to July 1, 1878; to report monthly to the Treasurer the State obligations so investigated and ascertained, specifying their respective denominations and numbers, with the amounts of the valid and invalid portions of each, and the amount of interest accrued on the valid portion to July 1, 1878; and so continue until he shall have examined and reported on the entire consolidated debt. The act gives the holder of State obligations so investigated and reported upon the right to surrender them to the State Treasurer for cancellation, and authorizes the Treasurer to issue and hand to the holder a new bond or certificate of stock equal in amount to the valid portion of the bond, certificate of stock, coupon, or interest order so surrendered and canceled. The new bond so issued "is to have the same benefits and privileges as those provided for in the act approved December 22, 1873, entitled 'An act to reduce the volume of the public debt of the State, and provide for the payment of the same.'" The maturity of the first coupon or interest due on these new bonds is fixed by the act on January 1, 1879.

A bill to redistrict the State, increasing the number of her Congressional districts from four to five, was introduced in the Lower House, and, after debate, indefinitely postponed by a vote of 55 to 40. It is stated that the passage of this bill would have secured a Republican Congressman for Charleston for ever, as the election in that district would have been then controlled by the colored vote.

A registration bill requiring all voters to be able to write their names, and several bills prohibiting the carrying of concealed weapons, were voted down or indefinitely postponed.

A joint resolution calling for a Constitutional Convention was introduced in the Lower House, and, on motion, tabled unanimously without debate.

The State finances appear to be in a satisfactory condition, and the administration of the government commendably economical. The aggregate expenditures for the legislative, executive, and judicial departments during the fiscal year ended October 31, 1879, amounted to \$124,895. For the year ending October 31, 1880, the State and ordinary county taxes to be levied are as follows: A general State tax of 4½ mills on the dollar, with two mills additional for the public schools, and a county tax of 3 mills for ordinary purposes. The 4½ mills of State tax, reckoning the aggregate value of taxable property in South Carolina at \$135,000,000, are expected to yield \$100,000 each mill, in all \$475,000. Of this amount, \$344,372 is appropriated to pay the interest on the consolidated debt for 1880, and \$34,000 to pay the deficiency bonds of the State. To com-

plete the payment of the interest due on the consolidated debt for 1879, the sum of \$144,375 was appropriated out of the \$175,000 collected in the two previous years for that purpose, and lying still in the Treasury. The remaining \$117,000 out of the \$475,000 of the State tax, and the royalty to be collected on phosphates, are considered sufficient to cover all the ordinary expenditures for the new year. The \$200,000 yielded by the two additional mills of State tax, and the entire poll-tax, amounting to \$100,000, are applied exclusively to the public schools.

The schools were attended in 1879 by 58,368 white pupils and 64,095 colored—in all, 122,463, which is the largest number on record for any one year in South Carolina. The average number of colored children in the public schools in 1879 was about 45 per cent. greater than in any preceding year. The newly erected lyceum for colored students in Charleston was dedicated on September 2d.

From the reports made by circuit judges and solicitors, after due inquiries instituted in their respective sections, it appears that crime in South Carolina has decreased at least one third since 1877. The number of convicts committed to the State Prison from November 1, 1878, to the latter part of November, 1879, was 1,017. Nearly three fourths of that number had been leased out by the Board of Directors of the Penitentiary, as authorized by law, to nine different parties, among them four railway companies, to be kept at the places of their several works, and under their charge. The applicant for convict-labor, after his application has been approved, is required by the Board of Directors to sign a contract embodying the terms of the lease, and give a sufficient bond for its faithful execution; the terms usually being that the lessee shall feed, clothe, and guard the prisoners intrusted to him, provide them with medical attendance, and in addition pay to the State a stipulated monthly rate for each convict during the time he has worked. The prisoners thus leased out up to the close of November, 1879, numbered 727, of whom 157 had died, 77 had escaped, and some had been killed. Among the prisoners remaining in the penitentiary itself, their average monthly number being 290, there were from November 1, 1878, to the latter part of November, 1879, 33 deaths, 8 escapes, and 1 killed. Since January 1, 1879, ten months, the deaths of the convicts at the State Prison numbered 13, including 5 returned thither from the places of their work outside in a dying condition. The Greenwood and Augusta Railway Company, to whom the largest number of convicts have been leased, is charged with having violated the terms of its contract in all points respecting their treatment. Out of the 285 prisoners sent to this company, 128 had died, a rate of mortality exceeding 40 per cent., and 37 had escaped. On complaints made during the summer, the Board of Directors sent three physi-

cians at different times to visit the convicts employed on that line, and report professionally as to their treatment and the cause of their mortality. The separate reports of these physicians all pointed out its cause by averring that the convicts leased to that road were most inhumanly treated in all respects, giving details of what they saw among the prisoners at the place of their work as well as among the sick at the stockades and the hospital, so called. The most unfit for duty among these convicts, 26 in number, were by order of the Board of Directors, under the care of two physicians, removed to the penitentiary on September 16th, two of them dying before reaching it, and one soon after his arrival. By a subsequent order the Board of Directors recalled almost all of the convicts leased to the Greenwood and Augusta Railroad; but the company refused to comply with the order, on the ground that the convicts had been granted them by the Legislature, and that only the Legislature could take them away. This matter was brought to the attention of the Legislature early in the session of 1879, and two sets of resolutions, very strongly worded, were introduced in the Lower House, to investigate the subject and bring the guilty parties to condign punishment; the one intrusting the investigation to a special committee appointed for that purpose, the other to the two Committees on the Penitentiary of the Senate and House of Representatives, working jointly, with power to send for persons and papers.

The general condition of South Carolina with regard to trade and other material interests appears to have considerably improved of late years. There was in 1879 a large increase in the quantity of bacon made in the State; besides, provisions in general were low, and the colored people employed worked well. The crops in 1879, with some exceptions, were good, and sold at remunerative prices. In consequence, the farmers as a body are in better circumstances and out of debt, or nearly so, for the first time in a long series of years. The advance in the selling price of cotton at the end of the year was equal to \$12 a bale; which, on a crop of 300,000 bales raised in the State, makes a difference of over \$3,000,000 in favor of planters and farmers. The value of land in South Carolina has increased, especially in the middle and upper districts. An Agricultural Department is now established in the State by a law entitled "An act to create a Department of Agriculture, defining its powers and duties, and charging it with the inspection of phosphates and the regulation and sale of commercial fertilizers."

The establishment and working of cotton-mills for the production of shirting, sheeting, drilling, and yarn, seem to be growing into great dimensions in South Carolina. The scarcity of competent operatives, which was before the chief difficulty encountered in the development of this industry, has been in a great mea-

sure supplied by the importation of some skilled hands from the Northern mills, who have taught a number of native young women and men how to feed and direct the machines. Nine such factories were in operation in different parts of the State in June, 1879, some of which were organized in 1855, but most of them since 1870. All were busy, with more orders than they could execute, and carrying on a very lucrative business. They employ in the aggregate above 55,000 spindles, with a proportionate number of looms, attended to by about 1,400 operatives at wages ranging from 25 cents to \$3 a day, according to usefulness. A large proportion of these operatives are lodged in convenient cabins erected near the factories for that purpose. Their aggregate annual production is reckoned at above 55,000,000 yards of shirting, sheeting, and drilling, and many million pounds of yarn. One of the three largest among these establishments is the Piedmont Manufacturing Company's mill, incorporated three years ago, and situated on the Saluda River, about eleven miles from Greenville, on the Greenville and Columbia Railroad line. It has 12,300 spindles, employs 275 operatives, and produces daily about 16,000 yards of shirting, sheeting, and drilling, and 2,300 pounds of yarns. From the books of this company it appears that, for the year ended March 31, 1879, its surplus assets over all liabilities amounted to \$36,889, and the gross profits on the sale of that year's manufactures to \$56,684, classified as follows: Profits on local sales, \$24,320.04; on sales to New York, \$9,401.98; on sales to Boston (yarns), \$10,619.64; on sales to Baltimore, \$7,180.12; on sales to all other parts, \$5,163.46.

L. F. Cardozo, ex-Treasurer of South Carolina, and Robert Smalls, a member of her Legislature in both Houses for a number of terms, and lastly a Representative in Congress, both colored, and since November 28, 1878, under sentence for high crimes and misdemeanors in office, with regard especially to money matters, were pardoned by Governor Simpson on April 23, 1879. He had previously pardoned L. Cass Carpenter, a white Republican Senator in the State Legislature, convicted on a like charge. In October, 1879, the Supreme Court of the United States, to whom Mr. Smalls had brought his case on appeal from the State Supreme Court, on a writ of error, dismissed it on motion of the Attorney-General of the State, the appellant's counsel concurring. Mr. Smalls is to pay the costs in the case. This is said to be the last one of the numerous criminal prosecutions, called political cases, instituted before the courts of South Carolina.

SPAIN, a kingdom of southern Europe. King, Alfonso XII., born November 28, 1857, proclaimed King December 30, 1874. He was married on January 23, 1878, to Maria de las Mercedes (born June 24, 1860, died June 26, 1878), and again on November 29, 1879, to Maria Christine (born July 21, 1858), daughter of Archduke Charles Ferdinand of Austria.

The area of Spain is 196,036 square miles; the population, according to the census of 1877, 16,623,384. Of the total population, 8,132,741 were males, and 8,490,643 females. There are also 2,476 inhabitants in the Spanish possessions of northern Africa, making in all 16,625,860. Of this number, 40,741 were foreigners.

The revenue was estimated in the budget of 1878-79 at 750,630,202 pesetas (1 peseta=19.3 cents), and the expenditures at 753,177,865 pesetas. The public debt on June 30, 1878, amounted to 12,875,007,428 pesetas.

According to a new plan of the Minister of War, the Spanish army is to consist in time of peace of 100,000 men, of whom 69,492 will belong to the infantry, 16,130 to the cavalry, 10,232 to the artillery, and 4,146 to the corps of engineers. The fleet in 1878 was composed as follows:

NAVY.	Guns.	Horse-power.
Vessels of the first class:		
5 ironclads	72	4,300
9 screw-frigates	249	5,020
2 paddle-steamers	15	1,000
Vessels of the second class:		
7 paddle-steamers	24	2,030
9 screw-steamers	83	1,895
2 transports	600
Vessels of the third class:		
1 iron-clad monitor	3	260
16 screw steamers	86	2,320

The commerce in 1878 was as follows (value in pesetas):

ARTICLES.	Imports.	Exports.
Grain	22,100,000	20,500,000
Beverages	10,600,000	183,900,000
Colonial goods	38,700,000	7,700,000
Seeds and fruits	1,600,000	54,900,000
Animals and animal provisions	19,600,000	18,300,000
1. Articles of food	92,600,000	235,300,000
Coal	21,200,000	
Ores and minerals		52,200,000
Raw metals	7,800,000	68,400,000
Hides and leather	16,200,000	
Spinning material	105,300,000	6,800,000
Esparto	1,600,000	7,100,000
Wood and cork	82,800,000	1,100,000
2. Raw materials	182,800,000	125,600,000
Glass and pottery ware	2,800,000	
Metallic goods	10,700,000	2,300,000
Machines	17,100,000	
Yarns	21,800,000	
Woven goods	28,000,000	
Furniture	2,500,000	
Corks		34,000,000
Paper and playing cards	4,500,000	2,600,000
3. Manufactured goods	87,400,000	88,900,000
Drugs, etc.	19,400,000	5,900,000
Resin, fats, and oils	13,300,000	25,600,000
Miscellaneous goods	2,300,000	
4. Miscellaneous	35,000,000	31,500,000
Total	397,800,000	431,300,000

The area and population of the foreign colonies are as follows:

COLONIES.	Square miles.	Population.	Year.
1. AMERICA:			
Cuba	45,884	1,894,516	1877
Porto Rico	3,506	661,494	1877
Total	49,490	2,056,010
2. ASIA AND OCEANICA:			
Philippines	65,866	6,163,632	1878
Carolines	534	18,500	1874
Palao	846	10,000	1862
Ladrones or Marianas	417	8,000	1873
Total	67,169	6,200,432
3. AFRICA:			
Guinea Islands	551	85,000	1853
Total colonies	117,494	8,291,442

Of the total population of Cuba, 764,164 are whites, 344,050 free colored persons, 227,902 slaves, and 58,400 coolies. In Porto Rico there are 363,434 whites and 298,060 free colored.

In the beginning of March a new Ministry was formed, under the presidency of Martinez Campos, who had shortly before returned from Cuba. The Chambers were dissolved, and the new Chambers were ordered to assemble on June 1st, the election to take place for deputies on April 20th, and for senators on May 3d. In these new Chambers Cuba was to be represented for the first time by 12 senators and 40 deputies. The elections on April 20th resulted in the return of 275 Ministerialists, 32 Constitutionalists, and 38 members of other parties. The Ministerial majority, however, was increased to over 300 with the deputies from the colonies. The Government candidates were returned in the majority of those districts which elect but one deputy, and were also at the head of the poll in the three-cornered constituencies owing to the systematic abstention of the Intransigente Federals. The coalition of the Progressists, the Constitutional party, and the friends of Castelar obtained for the three groups respectively 8, 34, and 9 seats. In the ranks of the majority more than 250 belonged to old followers of the last Cabinet devoted to Canovas del Castillo. The rest were chiefly Moderados, friends of Marshal Campos. More abstentions took place under the limited franchise bill than in 1876 with universal suffrage; but the Liberals, who contested more than 140 seats, were often beaten by a narrow majority. In Madrid 7,000 out of 21,000 voted, and in Barcelona 2,300 out of 8,200. The senatorial elections also gave to the Ministry a large majority in the Upper Chamber.

The Cortes were opened on June 1st by the King in person. In his speech from the throne he said that the Government would continue in the exercise of liberal principles, abolish abuses in the administration, and be as economical as possible. The relations to the foreign powers were satisfactory. Proposals would be made to relieve the distress caused by the war

in Cuba, and to abolish slavery in the Antilles, and with the assistance of the Cortes the Government would endeavor to assimilate the position of the colony to that of a province of Spain. On June 26th the Marquis of Orovio, Minister of Finance, presented the estimates for 1879-'80. The expenditure was put at 828,000,000 pesetas, and the probable revenue at 812,000,000. The estimates showed an increase of expenditure, owing to the interest on the debt and the heavy military outlays. The Minister fixed the probable revenue at a higher sum than the returns for the current year, admitting a deficit on the estimates as well as on the floating debt of the Treasury. The address was voted on July 14th by 247 against 44. The Cortes were prorogued on July 26th, without having done any work of importance.

The Chambers reassembled on November 3d. The principal question before them in this session was the abolition of slavery in Cuba. On November 4th the Minister of the Colonies read in the Senate the Government bill providing for this measure. The bill commenced by declaring that slavery will cease from the date of the promulgation of the law in the "Official Gazette" of Havana. All slaves will be compelled to remain for a period of eight years in the service of their present masters, who will act as their protectors, tending them when sick, paying them wages, and instructing the most capable. After the lapse of five years one fourth of the freed men will be completely emancipated from the control of the masters, the choice in this case being determined by lot; and on the expiration of the eighth year the power of the masters over the freed men will entirely cease. Corporal punishment will then be no longer permitted, and any offenses committed by the negroes will be dealt with by the public prosecutors, any act of rebellion being, however, punished by court-martial. In explaining the object and intention of the bill, the Minister said that slavery was contrary to the laws of nature, and could no longer be maintained in the civilized world. Owing to the impoverished state of the Spanish Exchequer, it was impossible to pay an indemnity to the owners of slaves, and the Government deemed it indispensable that the freed negroes should remain for a certain period under the patronage of their former masters; for by adopting this course the dangers which might ensue from the immediate and simultaneous emancipation of all the slaves would be avoided. He added that the Government considered that the scheme for the gradual enfranchisement of the slaves was contrary to the laws of 1870. Bills were also introduced by the Government for assimilating Cuba to the provinces of the kingdom, for tariff legislation, and other reforms. As it seemed impossible to obtain a majority in favor of these measures, the Ministry resigned, and a new one was formed on December 8th, under Canovas del Castillo. As soon as this Ministry

had assumed office, it substituted in place of the abolition bill of the former Ministry a new one, which provided for the gradual emancipation of the slaves in Cuba after eight years of provisional servitude under their present masters, in 1886, 1887, and 1888. In this shape it passed the Senate on December 26th, although the West Indian deputies declared that it would satisfy neither the owners nor the slaves. Both Houses then adjourned.

On November 24th the King was married to the Archduchess Maria Christine of Austria. The new Queen of Spain, who is the second wife of Alfonso XII., was born July 21, 1858. She is a daughter of Archduke Charles Ferdinand of Austria, who died in 1874. Her relationship to the Emperor of Austria is shown by the genealogical table given in the article **AUSTRO-HUNGARIAN MONARCHY**.

Juan Oliva y Moncasi, who attempted to assassinate King Alfonso in 1878, was executed on January 4th, in spite of numerous petitions for his pardon. Another attempt on the life of the King was made on December 30th. As he was driving from the palace with the Queen for his usual evening ride, two shots were fired at him by a man named Gonzalez. The would-be assassin, who was a waiter by profession and but nineteen years of age, was seized by the attendants.

A new rebellion broke out in Cuba in August. On the 27th of that month two insurgent bands appeared in the districts of Holguin and Santiago. General Blanco at once dispatched 2,000 men from Havana, and ordered the most energetic pursuit of the disturbers. The rebels were afterward joined by slaves who had demanded their liberty, and failing to get it had run away. The negroes soon assumed the lead, and began waging an indiscriminate war upon the whites, both Spaniards and Cubans. In imitation of what the Cubans did during the last insurrection, they constituted a so-called government in almost impenetrable woods and mountains, having at their head three mulattoes, ex-chiefs of the former insurrection—Maceo, Grombet, and Guillermon. Immediately upon the beginning of the disorders, Captain-General Blanco issued a decree in which he declared the province of Santiago de Cuba in a state of war. Another decree was published which, after describing the miserable condition of the inhabitants of the provinces of Puerto Principe and Santiago de Cuba in consequence of the last insurrection, directed that \$50,000 be appropriated for the assistance of the province of Puerto Principe and \$100,000 for that of Santiago de Cuba. The insurrection continued during the remainder of the year, although the Government denied that any importance was attached to it.

A new treaty with China regarding the immigration of Chinese to the island of Cuba was published in the "Official Gazette" of Havana in the beginning of July. Its principal points were as follows:

The immigration of Chinamen by contract is entirely prohibited; the immigrants will come to Cuba by their own free will, and both countries, China and Spain, bind themselves to prosecute those persons and vessels bringing Chinamen to Cuba against their will. Spain promises to treat the Chinese in Cuba with the same consideration as foreigners of the most favored nation. To this end the Chinese Government will provide with a passport every emigrant, and officials of both nations will visit every emigrant vessel leaving Chinese ports, in order to insure a full observance of this law. The Chinese Government will interpose no obstacle to the free emigration of Chinamen. The Emperor of China may appoint a consul at Havana and all other places on the island where consuls of other nations are stationed, and these consuls will enjoy the same prerogatives as their colleagues of other nations. Any Chinaman may leave Cuba whenever it pleases him, unless he is subject to judicial proceedings. All Chinamen can apply to the courts of justice, like any other foreigners; and if any of them have been treated contrary to law before this treaty was signed, their complaints will be examined and their rights accorded to them.

The treaty stipulates that a notification of one year must be given of desire of either party for any alteration of its provisions.

SWEDEN AND NORWAY, two kingdoms of northern Europe, united under the same dynasty. The King, Osear II., born January 21, 1829, succeeded to the throne at the death of his brother, Charles XV., September 18, 1872. He married on June 6, 1857, Sophia, daughter of the Duke of Nassau, born July 9, 1836. Their oldest son is Gustavus, heir apparent, Duke of Wermland, born June 16, 1858.

SWEDEN.—The executive authority is in the hands of the King, who acts under the advice of a Ministry, formerly called the Council of State. The composition of the Ministry at the close of 1879 was as follows: Baron L. de Geer, Minister of State and Justice; O. M. Björnstjerna, Foreign Affairs; J. H. Rosenswärd, War; Baron F. W. von Otter, Navy; H. L. Forsell, Finance; Dr. C. G. Malmstrom, Education and Ecclesiastical Affairs; Dr. L. T. Almqvist, Justice. Besides these there are two Ministers without portfolios: Dr. N. H. Vult von Steyern, and Dr. J. H. Lovén.

The area of Sweden, inclusive of inland lakes, is 170,741 square miles. The population of the several provinces or läns on December 31, 1878, was as follows:

LÄNS.	Population.	LÄNS.	Population.
Stockholm, City....	169,429	Elfsborg.....	290,766
Stockholm, Län....	143,763	Skaraborg.....	253,901
Upsala.....	108,541	Wermland.....	269,586
Södermanland.....	144,321	Oerebro.....	181,473
Ostergötland.....	270,823	Westmanland.....	127,586
Jönköping.....	195,328	Kopparberg.....	190,299
Kronoberg.....	169,890	Gefleborg.....	172,577
Calmar.....	243,600	Westernorrland.....	162,514
Gotland.....	55,011	Jämtland.....	79,764
Blekinge.....	185,639	Westerbotten.....	109,151
Christiansstad.....	292,116	Norbotten.....	87,681
Malmöhus.....	845,927		
Halland.....	185,411	Total.....	4,531,863
Gothenburg and Bohus.....	257,466		

Of the total population, 2,205,292 were males and 2,326,571 females. In 1877 there were 30,674 marriages, 142,674 births, 87,373 deaths, and 4,198 still-births.

The budget for 1880 estimates the revenue and expenditure at 72,630,000 crowns each (1 crown = 26.8 cents). Besides the budget, the Riksdag of 1879 voted 7,000,000 crowns for the construction of new railroads, and 1,500,000 crowns to increase the rolling-stock and other material of the existing roads. The expenses of the army, Church, and certain civil offices are in part defrayed out of the revenue of landed estates belonging to the Crown, and the amounts do not appear in the budget estimates. The public debt of Sweden on December 31, 1878, amounted to 212,548,240 crowns. The Swedish army in 1878 numbered 183,603 men. The navy consisted of 43 steamers, of 20,271 horse-power and 155 guns; 10 sailing vessels, of 105 guns; and 87 smaller vessels, of 113 guns.

The imports in 1877 amounted to 303,420,000 crowns, the exports to 215,913,000 crowns. The movement of shipping in 1877 was as follows:

FLAG.	ENTERED.		CLEARED.	
	Loaded vessels.	Tons.	Loaded vessels.	Tons.
Swedish.....	4,825	727,183	7,423	957,753
Norwegian.....	673	132,169	2,224	675,485
Foreign.....	4,941	723,552	5,161	972,207
Total.....	9,889	1,582,859	14,818	2,605,895

NORWAY.—In Norway the executive is represented by the King, who exercises his authority through a Council of State, composed of two ministers of state and nine councilors. Two of the councilors, who are changed every year, together with one of the ministers, form a delegation of the Council of State residing at Stockholm near the King. The Council of State was composed as follows in 1878: F. Stang, Minister of State; J. Holmboe, Finances and Customs; Dr. O. A. Bacheke, Justice and Police; J. L. Johansen, Navy; N. Vogt, Interior; R. T. Nissen, Education and Worship; C. A. Selmer, Army; C. Jensen, Revision of Public Accounts. The delegation of the Council at Stockholm consisted of O. R. Kierulf, Minister of State, H. L. Helliesen, and Major-General H. A. Munthe.

The area of Norway is 122,280 square miles, and the population according to the census of 1875 was 1,806,900. (For an account of the area and population of each of the provinces of Norway, see "Annual Cyclopædia" for 1876.) The movement of population in 1878 was as follows: Marriages, 13,825; births, 58,019; deaths, 29,541.

The receipts for 1878 amounted to 50,441,700 crowns (1 crown = 26.8 cents), the expenditures to 51,771,300 crowns. The public debt on June 30, 1878, amounted to 91,600,000 crowns. The imports in 1878 were valued at 140,348,000 crowns, and the exports at 91,630,000 crowns. The war navy in July, 1879, consisted of 30 steamers with 144 guns, and 92 sailing vessels with 149 guns. The commercial navy in 1877 consisted of 8,064 vessels, of 1,493,041 tons.

The railroads in operation in 1879 amounted to 1,059 kilometres. The number of government telegraph stations on December 31, 1878, was 127; length of lines, 7,617, and of wires, 13,711 kilometres. The number of inland dispatches sent was 466,766; of foreign dispatches sent, 115,254; of foreign dispatches received, 130,128; and of transit dispatches, 2,820; making a total of 714,968. The railroad telegraphs are not included in these figures. The number of post-offices in 1878 was 867; the number of inland letters sent, 9,137,754; of foreign letters sent and received, 3,410,936. The number of newspapers sent and received was 8,984,996.

The Swedish Riksdag was opened on January 18th. In his speech from the throne, the King stated that, owing to the depressed state of commerce, the revenue for 1880 was expected to fall below the usual estimates, and the Government therefore proposed to increase the duties on liquors and tobacco, and also on sugar and coffee. In the budget for 1880 the revenue and expenditures were each estimated at 74,650,000 crowns. In April both Chambers voted an increase of 20 ores (1 ore = 0.100 crown) per kanna (1 kanna = 2.76 quarts) in the tax on spirituous liquors. In May the Riksdag, in accordance with a Government proposition, passed a bill providing for the retirement of the notes of private banks of 5 and 10 crowns, and replacing them by notes of the Royal Bank. It was stated in support of the motion that over three quarters of all paper money is issued by the private banks, and that, while they had about 48,000,000 crowns in circulation, only one sixth of this amount was secured by coin deposits. In this way they drew interest to the amount of 3,000,000 crowns from a capital which did not exist, and which ought to pass into the Treasury of the state.

The Swedish Government in January returned to the French Government the 80,000 francs paid by the latter for the island of St. Bartholomew, for the purpose of founding a charitable institution on that island.

The Storting of Norway was opened on February 3d by the King in person. In his speech from the throne he stated that the depressed condition of commerce necessitated an increase of the direct taxes. Propositions to this effect would be submitted by the Government. Bills would also be submitted affecting the army organization and the city schools. The budget, as submitted by the Government, amounted to 46,000,000 crowns, but was reduced by 4,500,000 crowns by the Storting, the reductions principally affecting the army and navy. In consequence, numerous works on fortifications which had been begun had to be stopped. The general elections for the Storting, held in October, left its political complexion unchanged.

SWITZERLAND, a republic of central Europe, consisting of twenty-two cantons, three of which are divided into two independent half cantons each. The President of the Federal

Council for 1879 was B. Hammer of Soleure, and the Vice-President Dr. E. Welti of Aargau.

The area and population (according to an official estimate of July 1, 1878) of the different cantons are as follows:

CANTONS.	Square miles.	Population.
Zürich.....	666	298,642
Bern.....	2,069	630,606
Lucerne.....	580	183,605
Uri.....	415	17,188
Schwyz.....	351	49,756
Unterwalden ob dem Wald.....	183	15,221
Unterwalden nid dem Wald.....	112	12,093
Glarus.....	267	86,546
Zug.....	92	22,655
Freiburg.....	644	115,067
Soleure.....	808	78,907
Basel City.....	14	52,565
Basel Country.....	163	56,055
Schaffhausen.....	114	39,355
Appenzel Outer Rhodes.....	101	48,984
Appenzel Inner Rhodes.....	61	11,906
St. Gall.....	780	198,908
Grisons.....	2,774	98,307
Aargau.....	542	202,529
Thurgau.....	881	95,707
Ticino.....	1,088	122,586
Vaud.....	1,244	246,273
Valais.....	2,026	101,776
Neuchâtel.....	312	104,826
Geneva.....	108	101,686
Total.....	15,981	2,792,264

The movement of population in 1878 was: 20,550 marriages, 91,426 births, 68,904 deaths, and 3,593 still-births.

The total revenue of the Confederation for 1878 amounted to 41,536,226 francs, and the expenditures to 41,469,641 francs. The budget for 1879 estimated the receipts at 40,565,000 francs, and the expenditures at 42,028,000 francs. The liabilities of the republic amounted at the close of 1878 to 35,036,976 francs, as a set-off against which there was Federal property amounting to 41,197,439 francs.

The Federal army consists of the Bundesauszug, comprising all male persons between the ages of twenty and thirty-two, and the Landwehr, comprising all those between thirty-three and forty-four. In 1879 there were 578 officers and 119,419 men in the Bundesauszug, and 135 officers and 95,338 men in the Landwehr.

In 1878 there were 799 post-offices; number of internal letters sent, 47,530,128, and of foreign letters 20,201,012; newspapers, parcels of foreign and domestic printed matter, etc., 72,716,096. The length of the Government telegraph lines in 1878 was 6,523 kilometres, and of Government wire 15,960 kilometres; number of stations, 1,161; of dispatches sent, 2,476,988. The length of railroads in 1877 was 2,590 kilometres.

The principal question before the Federal Assembly in 1879 was the restoration of capital punishment. In March a bill was introduced restoring to the several cantons their liberty of action in this question. It was passed by the Cantonal Council on March 19th. In the National Council it was at first rejected, but was finally passed on March 28th. The ques-

tion was submitted to a popular vote on May 18th, when it was adopted by 196,197 to 177,263 votes. The cantons of Zürich, Bern, Basel City, Basel Country, Thurgau, Neuchâtel, and Geneva voted against it.

In December the Federal Assembly elected Dr. Welti of Aargau as President, and M. Anderwelt of Thurgau as Vice-President of the Swiss Confederation for 1880.

An important decision was given by the Fed-

eral Council in an appealed case on July 26th. The government of the Canton of Zürich in 1878 combined the Reformed and Catholic primary schools in one of its villages. The Catholic school officers appealed to the Federal Council against this action as unconstitutional. The Council disallowed the appeal, as the Federal Constitution simply provides that the public schools shall be open to children of all religious denominations.

T

TAYLOR, General RICHARD, the only son of General Zachary Taylor, born January 27, 1826, died in New York, April 12th. His ancestor, James Taylor, emigrated from England in 1682, and settled in southern Virginia. From him were descended two Presidents of the United States, James Madison and Zachary Taylor. Another distinguished scion, Richard Taylor, was lieutenant-colonel of the 9th Virginia regiment during the Revolutionary war. He married into the Strother family, and in 1791 removed to Kentucky. It was at his homestead, Springfield, near Louisville, Kentucky, that his grandson Richard Taylor, the subject of this sketch, was born. In the following spring he was taken to New Orleans, and the childhood of Richard Taylor was passed there or in frontier forts. His introduction to school life was at Fort Snelling, where he was the only white child in a school of half-breeds taught by a missionary. Soon after he was installed in the family of a life-long friend of his father, William C. Bullitt, with whose sons he attended the school of Robert N. Smith in Jefferson County, Kentucky. To that able and rigid instructor he was indebted for the foundation of his education. At the age of fifteen he was sent to Lancaster, Massachusetts, to be prepared for admission to Yale College. He entered the junior class in 1843, and graduated in 1845.

At the opening of the Mexican war in 1846 he joined his father, who was in command of the forces on the American frontier. Appointed his private secretary and aide-de-camp, he accompanied him through the campaign. He took part in the battles of Monterey, Resaca de la Palma, Palo Alto, Buena Vista, and others, where his father earned that military prestige which bore him triumphantly into the Presidential chair. During this period Richard Taylor went abroad. He was received everywhere with the highest distinction, which honors he accepted as intended for his country. His elegance of manner and conversational talent would anywhere, without adventitious aid, have secured his social success.

He afterward resided for some time near Rodney, Mississippi, on a plantation belonging to his father. In 1849 he removed to a sugar estate, Fashion Plantation, St. Charles Parish,

twenty miles above New Orleans, on the Mississippi River. In 1851 he married Miss Myrthé Bringier. The family of Bringier de Lacadière are of noble French blood. They emigrated to Louisiana, where they possessed the Houmas and other estates, more extensive and valuable than many European principalities. The lady whom Richard Taylor married shared with fortitude the fortunes of her husband during the civil war. Their property was confiscated after the fall of New Orleans in 1862. While a refugee, escaping before the advancing army with her little ones, they were stricken by scarlet fever. One of her boys died on the way, the other only lived to reach Shreveport. In 1875 she died in New Orleans, leaving three surviving daughters, her four sons having preceded her to the grave.

For many years Taylor lived the easy, hospitable life of a Southern planter. He was fond of society, a voracious reader, and singularly unambitious. Several minor offices he filled with credit to himself and the State, but he was indifferent to political preferment, which was clearly within his grasp. The events of 1860 roused him from his lethargy. He went as delegate to the National Democratic Convention held in Charleston in that year, and endeavored to bind together the discordant elements of the party. After the split in the Convention he was a delegate to Baltimore. In 1861 he was Senator from the parish of St. Charles in the State Legislature, and assisted in framing the act calling a State Convention, which met in March and passed the secession ordinance. Taylor was chairman of the Committee on Federal Relations and Defense, a difficult position under a Governor like Moore, economical of public money and wholly incredulous of the possibility of war.

After the investment of Fort Pickens, Taylor joined General Bragg at Pensacola. While there he was appointed colonel of the 9th Louisiana regiment. Hurried on to Richmond, the regiment arrived on the field the day after the first battle of Manassas. It was placed in the brigade of General Walker, who was soon after transferred to a Georgia brigade. Taylor was passed over the heads of the senior colonels and made brigadier-general. He unwillingly accepted this promotion, which was un-

popular with the brigade. Camp exposure had brought on an illness from which he was slowly recovering, and he had seen no service. The promotion was attributed to the partiality of President Davis toward the brother of his first wife, who was a daughter of Zachary Taylor. At the instance of General Joseph E. Johnston, Taylor went to Richmond to urge the adoption of that General's plan of army organization. During the Valley campaign of 1862 Taylor fought under Stonewall Jackson. The brigade bore its part well in many a fray, at Luray, Port Republic, Front Royal, and Winchester. On one occasion they captured a battery and turned it upon the enemy. General Jackson, in recompense of their gallantry, presented the battery to the brigade. When Jackson marched to the Peninsula, Taylor's command, still in Ewell's division, confronted McClellan, and was engaged in the seven days' fight around Richmond. Jackson recommended him for promotion. He received his grade of major-general while in Richmond, stricken with paralysis. Taylor was then assigned to command in Louisiana.

During the siege of Vicksburg, the *Indianola*, a heavily armed ironclad, passed the town and controlled the Mississippi River. The only boats at Taylor's disposal were the towboat *Webb* and an ordinary river-steamer, the *Queen of the West*, recently captured from the Northerners. The *Indianola*, with a coal-barge lashed on each side, was lying off a point sixty miles below Vicksburg. The attack was made at night. Both the vessels suffered severely, but the *Indianola* was struck four times, and then surrendered in a sinking condition. In a battle with General Banks at Mansfield, 2,500 prisoners, 200 wagons, and 20 pieces of artillery, besides side-arms and colors, were captured by Taylor. This success was speedily followed by the fight at Pleasant Hill, at which Banks and Taylor each claimed the victory. The report of Admiral Porter, bearing date April 14, 1864, says: "The army here has met a great defeat, no matter what the generals try to make of it. With the defeat has come demoralization, and it will take some time to reorganize and make up the deficiencies in killed and prisoners." General Grant from Virginia reported to Halleck in Washington: "You can see from General Brayman's dispatch to me something of General Banks's disaster."

At the close of the Red River campaign, General Taylor, believing that further operations in this quarter would accomplish nothing, asked to be relieved from duty. He was promoted to lieutenant-general and placed in command of Alabama and Mississippi. At Meridian Forrest reported to him, and was sent to impede Sherman's communications north of the Tennessee, and thus relieve Hood's army, then west of Atlanta. In December Taylor went to Tupelo to take command of the remnant of Hood's Army of Tennessee. The soldiers were moved as speedily as possible to re-

enforce Johnston in North Carolina. Taylor was left confronting Canby and hard pressed by Wilson's cavalry. On the 8th of May, 1865, he surrendered to Canby at Citronelle, and his military career terminated.

After four years' absence, he returned to New Orleans penniless. This lord of many acres now called nothing his own but his horses. These he sold for \$350, with which he began life afresh. He took charge of some important public works, among others of the Carondelet Canal. In January, 1873, he again visited Washington in the interest of his State, then torn in two by two rival Governors and Legislatures, and with the military overriding the civil power. His intervention proved vain. In May he was sent to Europe in the interest of some Northern capitalists, and was again received with the same kindness as when in the heyday of his father's glory he visited England. After the death of his wife, convinced that Louisiana was permanently blighted, he removed his family to Winchester, Virginia, the residence of Mrs. Dandridge, his sole surviving sister. He turned his attention to literature, and became a frequent contributor to periodicals, both French and English. He spoke both tongues with equal facility, and was wont to boast that he acquired "French in Louisiana, English at Fort Snelling, and American in the Old Dominion." Unfortunately, his sparkling wit and fund of anecdote are without record. His work on the war, "Destruction and Reconstruction," was written when the hand of disease was already upon him. He was in New York supervising its publication, when fatal symptoms manifested themselves.

TENNESSEE. The General Assembly met January 9th. The first question considered was that of reducing the emoluments of many of the officers of the State and counties. Functionaries who were paid by fees and perquisites were required to pay over to the State Comptroller, or to the County Trustee if a county officer, the amount of these fees which was in excess of \$2,000 per annum. Many opposed this measure on constitutional grounds, as embodying an unauthorized mode of taxation. Many officers receiving stated salaries had their stipends reduced. A bill requiring insurance companies to pay the full amount of insurance named in the policy in the case of the total destruction of property by fire, and to pay on the basis of the value named in the policy in the case of partial destruction, was vetoed by the Governor, on the grounds that in the first instance named it would prove an incentive to incendiarism, negligence, and fraud, and was thus opposed to public policy, and that in the second class of cases it would prove prejudicial to policy-holders, as they usually undervalue their property in insurance policies.

The question which engrossed the attention of the Legislature to the exclusion of all others for a great part of the session, and on which steps were taken for an adjustment for the first

time, was that of the settlement of the State debt. The interest on the bonds of the State has been in default since 1870, when the tax tariff was reduced from 60 to 20 mills on a dollar. In 1877 the creditors of the State agreed to compromise the debt at the rate of 60 cents on a dollar, at 6 per cent. interest. This was not accepted. The question of the adjustment of the debt finally became a political issue. Party lines were not strictly drawn, though the Republicans generally favored payment in full, or acceptance of the bondholders' proposed compromise at first, and afterward the settlement proposed by the Legislature at 50 cents and 4 per cent. interest. When the Legislature met, it was expected that the matter would be adjusted in some way. One party favored the acceptance of the bondholders' proposition; another, a settlement on the basis of 50 cents on the dollar at 6 per cent. interest; another advocated the basis of 33½ cents; and a fourth party declared itself in favor of total repudiation. This was made the leading issue of the popular elections, and many members of the Assembly had been elected upon it. Soon after the Legislature met, the question was taken up. It was referred to the Committee on Finance, Ways, and Means. Mr. Savage, chairman of the committee, submitted the majority report on the proposition regarding the settlement of the State debt on the 11th of March. The report was in the form of a bill embodying the following provisions:

1. That the Capitol bonds, amounting to \$493,000, the Hermitage bonds, amounting to \$35,000, the Agricultural bonds, amounting to \$18,000, the bonds held by Mrs. Polk, amounting to \$29,000, and the bonds held by the educational institutions of the State, upon which interest has been paid under a resolution of the last General Assembly, be settled and funded, with the accrued interest, at the rate of 60 cents to the dollar, at 4 per cent. per annum interest.

2. That the Union Bank bonds, amounting to \$125,000, the Bank of Tennessee bonds, amounting to \$214,000, the turnpike bonds, amounting to \$723,000, the Hiwassee Railroad bonds, amounting to \$280,000, the East Tennessee and Georgia Railroad bonds, amounting to \$144,000, the La Grange and Memphis Railroad bonds, amounting to \$63,000—all the above bonds, except bonds belonging to educational institutions, being bonds of the State debt proper—and the bonds issued under the internal improvement act of 1852 and amendments thereto, known as the ante-war railroad bonds, amounting to \$8,583,000, be settled and funded, with accrued interest, at 50 cents to the dollar, at 4 per cent. per annum interest.

3. That the bonds funded under the act of 1868, amounting to \$569,000, and the bonds funded under the act of 1873, amounting to \$4,867,000, be settled and funded with accrued interest at 33½ cents to the dollar, at 4 per cent. per annum interest.

4. That the Mineral Home bonds, amounting to \$63,000, and the bonds funded under the act of 1866, supposed to cover the war interest, amounting to \$2,246,000, be rejected and not paid.

5. That the railroad bonds issued since the war, amounting to \$2,263,000 now outstanding with accrued interest, be settled at the rate of 33½ cents to the dollar, and paid in the non-interest-bearing Treasury warrants of the State, in the denominations \$5, \$10, \$20, and \$50, neatly printed on good paper, which shall be receivable for taxes and all other dues to and from the State.

The new issue of bonds was to run nineteen years and be redeemable at the end of five years, the interest to be payable once a year at Nashville. The act was to be submitted to the people, who should vote upon it in a special election the first Thursday in August, and then passed upon finally by the Legislature after having received the popular approval. The committee gave the amount and character of the debt and the acts under which the several classes of bonds were issued, making a distinction between what they called the State debt proper, amounting to \$2,105,000, and the bonds issued under and subsequent to the act of 1852 and posterior acts, including the funding acts. As to the nature and extent of the State's obligation for the rest of the debt incurred by the State, they declared, if there was any obligation, it was secondary, as endorsers, as to \$11,221,000. Of these the law required certain conditions precedent and subsequent, which, in nearly every instance, were not observed. The greater part of the present debt they declared to be the result of a vicious policy and corrupt legislation. They denounced the acts for the sale of the railways and the payment of the purchase-money in bonds of any series, as having been procured by interested combinations. Setting out the requirements of the act of 1852, they concluded that seven of these were conditions precedent, and legal notice to purchasers of the bonds, and, having been violated, that \$11,221,000 of bonds issued in aid of railways under the act of 1852 were void, and any settlement thereof by the State rests not in a valid contract, but upon consideration of State policy.

Senator Clapp prepared a minority report, in which he contested the grounds advanced in favor of the rejection of any part of the bonded debt. The arguments put forward in favor of scaling down the debt included, besides, that of the inability of the State to raise the taxes necessary to discharge the obligations in full. The report assumes that the liability of the State upon bonds issued in her name rests for its decision on the law and facts of the case, as in a controversy between private persons. If the Legislature has not inherent power to make contracts, it can not communicate such power to its creatures, private and public corporations. The State is the primary and only party liable for its bonds. As a legal proposition, the report can not understand upon what ground the State expects to escape liability as surety or guarantor on its railroad bonds as the maker of a negotiable instrument. As to funding the war interest, the minority knows of no principle of international law that suspends interest on interest-bearing debt due by one of the belligerents to the other. As to the charge of voidness of post-war bonds because of corrupt legislation and illegality of the government, he showed that the vested rights acquired would not be invalidated were the charge proved; but he insisted that the proof

fails to show more than presumptive bribery and undue means, or to trace them to any member of the Legislature.

The bill, as it was afterward modified by amendments, embraced the proposition of funding the greater part of the debt at the rate of 50 cents on the dollar, with 4 per cent. interest. This settlement was to be subject to the acceptance of the bondholders and the approval of the people. The bill as amended was finally passed by a close vote on the 28th of March. Before the vote was taken the Governor had transmitted a message to the Assembly announcing a proposition from the managers of the different railroads to waive the immunity from taxation extended to the railroads in their charters, and contribute to the State taxes from \$80,000 to \$100,000 annually for the extinction of the principal and interest of the State debt. In accordance with this the actual burden of the debt would be reduced to 40 cents on the dollar and 4 per cent. interest if the compromise at 50 cents should be effected.

Governor Marks appointed B. A. Euloe and Nathaniel Baxter, Jr., to communicate with the holders of the State bonds and procure their acceptance of the compromise voted by the Legislature. Ex-Governors Porter and Brown and others were deputed by a mass-meeting of citizens to present the case to the creditors and citizens of the East. At a dinner in New York in the middle of April they received the approval of many bondholders, merchants, and bankers of the proposed settlement. The provisions of the bill required that the Governor should secure the acceptance of bondholders possessing an equal amount of bonds with those who had agreed to the proposition of 60 cents with 6 per cent. interest, before calling for a popular vote on the question. After fulfilling this condition, Governor Marks ordered the popular vote to be taken. On the 7th of August, the day appointed for this purpose, the proposed settlement was rejected by a large majority, 30,920 voting against it and 19,669 in its favor. This action of the people left the question of the final settlement still unresolved. Although understood to have been an expression of a popular sentiment in favor of total repudiation, it had only the effect of postponing the decision of the question, which belongs to the State Legislature.

The following is a statement of the funded debt and registered debt of the State on December 21, 1878: Registered (act of 1873), \$14,665,000, at 6 per cent. interest; \$292,300, at 5 per cent.; \$397,000, at 6 per cent., not required to be registered; and \$4,867,000 at 6 per cent. in funding bonds (1873). On the same day the unpaid interest amounted to \$4,201,902.50. The bonded debt, including unpaid interest under the present laws, would amount to about \$25,676,500 on January 1, 1880. This sum does not include the school-fund certificates (\$2,512,000), the railroad debt

due to the United States (\$671,045.45), the outstanding notes and debts of the Bank of Tennessee, or the debts due to laborers on delinquent railroads while the State government was running them. The last three items mentioned amount to about \$2,700,000. Should these sums be added to the State debt proper, it would amount to about \$31,560,000.

By the improvement act of 1852 bonds of the State, which constitute the greater portion of its present debt, were issued and loaned to the railroad companies on the condition of the completion of stipulated portions of their roads, as a credit to encourage improvements of public benefit. By the original act these bonds were made a primary lien on the railroad property. This lien was removed by subsequent action of the Legislature, and the railroads were permitted to redeem the bonds by delivering into the Treasury State bonds of equal amount of any series. At a time when the securities of the State were sold in the market at a discount of 60 per cent. and over, several of the railroads availed themselves of this permission and redeemed their obligations to the State by returning bonds of other series. Other roads were afterward foreclosed upon by the State authorities and resold to other parties. Many of the holders of the Tennessee internal improvement bonds, while the matter was awaiting the decision of the people and the Legislature, brought as a test case a suit of foreclosure against the railroads, upon the advice of Charles O'Connor of New York, upon the ground that the lien on the railroad property was a part of the original contract contained in the bonds, and could not constitutionally be revoked by any subsequent action of the Legislature. The following is the amount of bonds claimed to be secured by a lien on the railroads named under the act mentioned, and which are still outstanding against those roads: Roads operated under what is known as the Wilson system of railways—Cincinnati, Cumberland Gap, and Charleston, \$377,000; East Tennessee and Georgia, \$1,102,000; East Tennessee and Virginia, \$1,237,000; Memphis and Charleston, \$841,000; total, \$3,557,000. Roads included under the name of the Louisville and Nashville and Great Southern Railroad—Louisville and Nashville, main stem, \$308,000; Memphis, Clarksville, and Louisville, \$819,000; Memphis and Ohio, \$1,199,000; Tennessee and Alabama, \$479,000; Central Southern, \$364,000; total, \$3,169,000. Roads now embraced under the name of the Nashville, Chattanooga, and St. Louis Railway—Nashville and Chattanooga, \$120,000; Nashville and Northwestern, \$1,422,000; McMinnville and Manchester, \$360,000; Winchester and Alabama, \$479,000; total, \$2,381,000. Other roads—Mississippi Central, \$488,000; Mississippi and Tennessee, \$105,000; Mobile and Ohio, \$960,000. The St. Louis and Southeastern Railroad is sued for bonds issued to the Edgefield and Kentucky road. The amount of bonds originally issued toward the

construction of the above roads was \$29,251,-250; of this amount there are outstanding \$12,-453,000; amount of funded bonds now outstanding and claimed as a part of these secured by a lien, about \$2,423,000. Upon this amount there is an accrued interest of 21 per cent. The total amount claimed by the bondholders is between \$17,000,000 and \$18,000,000.

The basis of taxation and the receipts and expenditures are estimated by the Comptroller as follows:

BASIS OF PROPERTY OR AD VALOREM TAX.	
Tax aggregate.....	\$223,212,153
Less 18 per cent.....	29,917,572
Net.....	\$194,194,574
PERMANENT PRIVILEGES AND OTHER FIXED REVENUES.	
Circuit Court clerks, including redemptions.....	\$40,000
Other clerks, not including County Court clerks.....	20,000
Insurance companies.....	20,000
Penitentiary.....	70,000
Express, telegraphs, banks, etc.....	10,000
Railroads.....	100,000
Treasurers, agents, delinquents, etc.....	85,000
Total.....	\$295,000
ESTIMATED EXPENDITURES.	
Current expenses.....	\$525,000
Interest on school fund.....	150,750
Interest on State debt—\$12,000,000 @ 4 per cent.....	500,000
Total for one year.....	\$1,175,750

He estimates the receipts at different tariffs as follows: At 10 mills on a dollar, \$649,194; at 15 mills, \$761,000; at 20 mills, \$883,389; at 25 mills, \$995,583; at 30 mills, \$1,107,583; at 35 mills, \$1,219,680; at 40 mills, \$1,331,778.

The bankrupt condition of the finances of Memphis and several other towns and cities led to a number of special acts revoking or modifying the charters of these municipalities. At the request of the city of Memphis, which was laboring under the burden of a debt estimated at over one third of the taxable property, and had been depopulated and impoverished by the ravages of the yellow fever, the charter was taken away, and the administration assumed by the State government. By a subsequent act the Governor was authorized to appoint commissioners for the settlement of the debts of extinct municipal districts. At the instance of certain holders of the city's securities, an action was brought before Judge Baxter, of the United States Court at Memphis, calling for the appointment of a receiver. The Court delivered the opinion that the act of the Legislature repealing the charter was unconstitutional and void, as was also the act creating a taxing district. The Judge appointed Mr. Latham receiver, to take charge of the assets of the city, to the exclusion of receiver Meriwether appointed by the State authorities. The Supreme Court of the State afterward declared the laws repealing the municipal charter and constituting a taxing district valid and within the Constitution—Judges Cooper, McFarland, and Deaderick concurring, and Judges Freeman and Turney dissenting. The

debts of the city of Memphis amounted altogether to \$4,403,454, including the funded debt, consisting of the compromise bonds for \$1,104,-825 issued in lieu of the old funded debt of \$2,209,650, and the unfunded debt amounting to \$3,298,629. The nominal assets amounted to \$2,265,245, valued by a special committee at \$904,878. There were over two million dollars' worth of uncollected taxes due to the city.

Governor Marks called an extra session of the General Assembly for the purposes of granting Memphis the power to perfect and carry out completer methods of sanitation, of amending the charters of towns and cities so as to enforce sanitary regulations, framing a law for the prevention of the spoliation of graves and traffic in dead bodies, and extending the charter of the Memphis and Paducah Railroad. The Assembly met at the time appointed, the 16th of December, and proceeded to consider the questions proposed to it.

The apportionment of school-taxes requires \$75,375, distributed among the counties in proportion to their scholastic population. The total number of scholars in the State is 448,-917. Recent amendments of the school laws extend the school age to twenty-one years, and include the subject of agriculture in the curriculum of studies.

The first enforcement of the law against carrying deadly weapons was made by Judge Thomas D. Eldridge of the Bartlett Circuit, who sentenced a prisoner to a fine and three months' imprisonment for this offense.

The question of the constitutionality of the new law equalizing and reducing the pay of clerks, by requiring them to pay their fees in excess of a certain amount into the public Treasury, was brought before the Supreme Court, but was not decided on its merits in the absence of a real cause of action.

The yellow fever appeared again in Memphis in July, and continued until cold weather. The city was immediately deserted by all its inhabitants except a part of the poor and colored population. There was fear at one time that the deserted houses would be sacked, and that an anarchic condition would prevail. Governor Marks intrusted the duty of preserving order to the resident companies of colored militia. There were several hundred deaths by yellow fever during the season. It was principally to provide for extraordinary sanitary measures lest the disease should become endemic in this locality that the Governor called the special session of the Legislature.

TEXAS. The Legislature opened its regular session at Austin on January 14th, when the new Governor, Oran M. Roberts, was formally installed in office, and closed by final adjournment on April 24th.

A constitutional amendment adopted by the Legislature, exempting from taxation all agricultural products while in the farmer's hands, and all necessary supplies for his use, was voted

upon the first Tuesday in September. This measure was denounced by a large portion of the people and press in the State, because it discriminates in favor of the farmers to the prejudice of those engaged in other pursuits, who are allowed no similar exemption. In Harris County, which is divided into twenty-six election precincts, polls were opened in five precincts only on the election day, and all of the votes cast were for the amendment.

An act was passed endowing the Governor with power to remove officers and the superintendents of charitable or other State institutions at his discretion. A portion of the press in the State protested against this bill as despotic. It went into force on September 1st.

An act was passed authorizing the issue of State bonds to the amount of \$3,373,000, classified as follows: Bonds of \$1,000 each, \$1,373,000; of \$100 each, \$1,000,000; of \$10 and \$5 each, \$1,000,000. The bonds of the first two classes are payable in United States gold coin within thirty years from July 1, 1879, bearing interest at the rate of 5 per cent., payable semi-annually. The ten- and five-dollar bonds are payable in twenty years from July 1, 1879, bearing interest at 4 per cent. The interest coupons attached to the bonds are receivable for all State taxes.

The Governor vetoed the items in the general appropriation bill appropriating money for the payment of interest on the State debt, for the sinking fund, and for the public free schools, amounting in the aggregate to about \$1,000,000; and the Legislature adjourned without taking further action on the subject. The Governor's veto created intense excitement in the State; the more so because he had in a manner approved these appropriations in advance, as he had previously signed the tax bill in which a levy of taxes was ordered for each of those purposes. Enthusiastic mass meetings were held, and resolutions adopted expressing resentment against Governor Roberts for the injury he had done to the good name of the State and to education by depriving the public schools of that necessary support which the organic law has provided for their maintenance. Of the one hundred and two newspapers published in Texas, not more than two or three sustained the veto in full. It also threatened injury to the State's credit in the New York money market, as the holders of Texas bonds became apprehensive of the non-payment of the interest due them on July 1st. To allay their fears the State Comptroller wrote to New York assuring them that the State had ample means, and that the money to pay the interest on their bonds was ready. As these matters could not be delayed without detriment to the most vital interests of the State, the Governor, by a proclamation issued a few weeks after the close of the regular session, convened an extraordinary one for June 10th, chiefly to make the appropriations he had before vetoed; his proclamation beginning with the following

preamble: "Whereas, the Legislature which convened on the 14th of January, 1879, adjourned *sine die* on the 24th of April, 1879, without passing any law that is now in force making annual appropriations for the support of the free common schools, for the payment of the interest and sinking fund of the bonded public debt of the State, and for other objects necessary for the successful operation of the State government." The called session was opened at the appointed time, and passed the necessary appropriations, reducing that for the schools from one fourth to one sixth of the State revenue. By various messages sent in during its continuance, the Governor laid before the Legislature for consideration a number of subjects besides those mentioned in his proclamation.

A Sunday law was also passed at this session, the first and second sections of which provide that "any person who conscientiously believes that the seventh or any other day of the week is the Sabbath, and who actually refrains from business and labor on that day," may attend to business and labor himself, and employ others, on Sunday. The fourth section provides as follows: "Any merchant, grocer, or dealer in wares or merchandise, or trader in any lawful business whatsoever, who shall barter or sell on Sunday, shall be fined not less than twenty nor more than fifty dollars: *Provided*, this article shall not apply to markets, or dealers in provisions, as to sales made by them before 9 o'clock a. m. The preceding article shall not apply to the sale of drugs and medicines on Sunday." This law was very unfavorably commented upon by the press in the State; and the people assembled in meetings to condemn it on several accounts.

The financial condition of Texas is satisfactory, the State debt being inconsiderable and her revenue sufficient to meet all the public expenditures. Deficiencies have occurred in previous years, especially in 1876 and 1877, from defaulting sheriffs and collectors of taxes. It is estimated that nearly \$800,000 are now due to the State on this score; for much of which sum suits have been instituted and judgments obtained, though the recovery of the money is considered difficult. The defects in the laws which gave rise to these defaults were mostly cured by an act passed in 1876, which went into effect August 31, 1877.

Of the salable lands of Texas, in regard to quantities, location, price, and manner of purchase, accurate information is given by the following reply of the State Land Commissioner to a request of the Governor:

GENERAL LAND-OFFICE, AUSTIN, September 16, 1879.

Hon. O. M. Roberts, Governor of Texas.

SIR: In compliance with your request of the 13th inst., I append a brief statement of Texas State lands now for sale, with location, price, and mode of purchase:

1. Common-school lands, 12,800,000 acres. These are situated in various amounts in 210 of the 225 counties of the State, and consequently embrace every va-

riety of soil, climate, and production of our extensive territory. These lands are for sale at a minimum price of one dollar per acre, payable in ten equal annual payments, with interest. Each individual may purchase not less than 160 nor more than 640 acres of farming lands, or three sections of pasture land. Application to purchase must be made to the county surveyor.

2. University lands, 219,906 acres, situated in Cooke, Fannin, Grayson, Hunt, Collin, Lamar, McLennan, Shackelford, and Callahan Counties. These lands are in the richest and most populous portions of the State, and are for sale in tracts of 80 or 160 acres at a minimum price of \$1.50 per acre, on the same terms as the school lands. Application to purchase must be made to the county surveyor.

3. Asylum lands, 407,615 acres, situated in the counties of Callahan, Comanche, Eastland, Jones, Shackelford, Stephens, Taylor, and Tom Green. This section is settling up and improving more rapidly now than any other portion of the State. For sale in tracts of 160 acres, at same price and on same terms as university lands.

4. State Capitol lands, 3,050,000 acres, situated in Dallas, Deaf Smith, Castro, Cochran, Lamb, Bailey, Hockley, Hartley, Oldham, and Parker Counties. Three million acres of these lands are subdivided into tracts of one league (4,428 acres) each, and the field-notes returned to the General Land-Office. They are for sale at 50 cents per acre in such quantities as may be desired. The 50,000 acres are divided into surveys of 640 acres each, and are likewise for sale at 50 cents per acre in such quantities as may be desired, provided that no section shall be divided. Application to purchase must be made to the General Land-Office. No expense attaches to the purchase of these lands, other than the purchase money and patent fee. These lands will not be offered for sale before January 24, 1880.

5. Public debt reserve. Under the act of July 14, 1879, all the vacant and unappropriated public land within the territory bounded on the north by the Indian Territory, on the east by the 100th degree of longitude, on the south by the 32d degree of latitude, on the west by the 103d degree of longitude, all the unappropriated land within the Pacific reservation, and all tracts of 640 acres or less within the organized counties of the State, are offered for sale in tracts of 640 acres each, or less, at 50 cents per acre. Purchasers must apply to the surveyor of the county or district in which the desired land may be situated. He will survey the land and return field-notes to the General Land-Office, at the expense of the purchaser. Within sixty days from the filing of the field-notes in the Land-Office, the purchaser must pay into the State Treasury 50 cents per acre, or forfeit all right to the lands. I have the honor to be, very respectfully, etc.

W. C. WALSH, Commissioner.

Concerning these lands, forgeries and deceits of all kinds have been for a long time extensively practiced to the injury of purchasers, especially immigrants who intended to settle in Texas. The Legislature of 1879 appointed from its own members a Special Committee on Land Frauds, charged to investigate the matter thoroughly. The evil appears to be of such magnitude that, after having spent nearly every night for a month in hearing testimony and examining written evidence, the committee were made sensible that frauds without end had been practiced.

The aggregate number of teachers employed in the public schools of the State is reckoned at 6,000, chiefly home-born. Most of them are paid from the school fund for four months of tuition, the average school time in the year;

but a large number of them keep their schools open for six months more in communities that are able to support their schools by private contributions.

The State Hospital for the Insane, which had 300 inmates in March, 1879, has been conducted with good success in the professional treatment of its patients under the superintendence of Dr. D. R. Wallace, who has gained a national reputation in this position. The Governor has recently removed him, as well as Henry E. McCulloch, Superintendent of the Institution for Deaf Mutes, both of whom had filled their offices for many years with eminent satisfaction.

Crime in Texas has rapidly increased. The number of criminals committed to the State Prison is great; but much greater is the number of those at large, who have escaped from confinement or evaded arrest. Those committed to the penitentiary, as is the practice also in some of the other Southern States, are leased out in gangs as laborers. Each lessee keeps them under his charge in a camp at the place of his work; the guards also are in his employ, and the State has no immediate control over the convicts, and no means to check the lessee's possible abuse of his powers in overworking or otherwise maltreating them. A list compiled from the official records of the several counties on file at the Adjutant-General's office, and published under his name, shows the number of Texas criminals going at large to be 4,585, charged with the following offenses: Murder, 856; attempted murder, resulting in wounding or crippling, and not in death, 911; infanticide, 5; accessory to murder, 7; threatening human life, 30; arson, 20; perjury, 39; forgery, 55; embezzlement, 32; burglary, 81; cattle-stealing, 541; hog-stealing, 169; horse-stealing, 601; abduction, 9; swindling, 127. One of the first official acts of Governor Roberts was to revoke all offers of reward previously announced in the name of the State for the capture of criminals.

The sheriffs' annual convention, held at Austin on September 10th, and attended by about forty sheriffs, was addressed by ex-Governor Lubbock on the duties of executive officers, and by the tax-clerk in the State Comptroller's office on the laws governing the Tax Department. Resolutions were adopted to provide for the publication of a monthly register of criminals, giving the fullest description possible; and a committee of five, besides the *ex-officio* chairman, Sheriff Corwin of Travis, was appointed with power to devise ways and means for the arrest of criminals. A resolution was also adopted taxing sheriffs five dollars each, and deputies half that amount, to aid in the arrest of parties charged with killing sheriffs or their deputies while engaged in the lawful discharge of their duty.

In connection with this subject, the following facts seem worthy of record: In February Deputy Sheriff Llewellyn of Omaha, Nebraska,

secured at North Platte David Melisky and Charles Reed, *alias* Dud Douglas, a noted Texas murderer, for whom a large reward had been offered. Both men were confined in jail in Omaha. Several dispatches passed between the chief police officers of Omaha and Anstin, Texas, regarding the prisoners, establishing the identity of both beyond doubt. The first telegram from Texas stated that Melisky was under indictment for murder, and the second stated that no appropriation had been made for the officers' expenses, and consequently that they could not come for the prisoners. The third dispatch repeated this fact, and Melisky was finally released in the District Court on a writ of *habeas corpus*, even after having confessed to the murder of three individuals. Reed murdered three soldiers at Fort Griffin, Texas, two years ago, while they were attempting to arrest him. He is twenty-two years of age. He was also released after considerable telegraphic correspondence, ending with the following dispatch from Governor Roberts: "Sorry to say we have no money appropriated yet to pay expense, and no one to send after Reed. Have been trying to do so for a week." Great indignation was manifested against Governor Roberts for allowing these two murderers to be set free; and afterward, when he commuted to imprisonment the sentence of death which the courts had passed on two other notorious criminals, Ouard and Fields, the former convicted of murder in the first degree, and the latter of rape.

TURKEY, an empire in eastern Europe, western Asia, and northern Africa. The reigning sovereign is Sultan Abdul-Hamid II., born September 22, 1842. He succeeded his elder brother, Sultan Murad V., August 31, 1876. The heir presumptive to the throne is his brother, Mehemet Reshad Effendi, born November 3, 1844.

The area and population of the Turkish Empire, after the changes produced by the treaties of 1878, are as follows:

POSSESSIONS.	Square miles.	Population.
In Europe:		
Immediate possessions.....	72,132	5,044,000
Province of Eastern Roumelia.....	13,663	751,000
Bosnia and Herzegovina, administered by Austria.....	20,117	1,213,000
Tributary Principality of Bulgaria..	24,661	1,859,000
Total in Europe.....	130,573	8,867,000
In Asia:		
Immediate possessions.....	729,484	17,500,000
Tributary Principality of Samos....	212	37,080
Total in Asia.....	729,696	17,537,080
In Africa:		
Vilayet of Tripoli.....	344,495	1,010,000
Dependencies. } Egypt.....	669,388	17,886,000
} Tunis.....	45,716	2,100,000
Total in Africa.....	1,259,589	20,496,000
Grand total.....	2,119,808	46,900,000

The receipts and expenditures in the budget for the financial year 1295 (March 13, 1879, to

March 12, 1880) were estimated as follows by the Financial Commission (in piasters—1 piaster = 4 cents):

EXPENDITURES.	
1. Public debt.....	165,048,351
2. Dotations.....	205,757,243
3. Restitutions.....	575,000
4. Ministries.....	716,183,777
5. Police and gendarmes.....	116,716,901
6. Customs and indirect taxes.....	45,000,000
7. Archives.....	6,000,000
8. Forests and mines.....	12,000,000
9. Posts and telegraphs.....	30,000,000
10. Public health.....	7,105,169
Total.....	1,804,836,441
RECEIPTS.	
1. Customs.....	160,000,000
2. Egyptian tribute.....	76,500,000
3. Other receipts.....	1,158,082,000
Total.....	1,424,582,000

These estimates apparently leave a surplus of 120,245,559 piasters. This result, however, was obtained only by crossing out, in addition to the interest of which payment was previously suspended to the amount of 1,338,840,622 piasters, the interest on the loan of 1855 to the amount of 11,998,460 piasters, payment of which has been guaranteed by France and England. But, notwithstanding this operation, the surplus is only an apparent one; for if the new loan which it has been intended to make should not be brought about, one fifth of the taxes and other receipts—i. e., 237,616,400 piasters—would have to be used for the retirement of the paper money. There will also be another loss, as the remaining four fifths of the taxes will be paid in a depreciated coin, making in all a loss of 10 per cent., or 95,046,560 piasters. Finally, the customs are paid in silver, which is also worth from 5 to 6 per cent. less than gold. The total deficit may therefore be estimated at 342,272,960 piasters. The entire liabilities at the close of 1877 were estimated at 6,130,000,000 piasters.

The army in 1879 comprised 150,000 men, of whom 18,000 were stationed in and around Constantinople, 10,000 at Tchatalja, 30,000 in Eastern Roumelia and the territory evacuated by the Russians, 25,000 at Salonica, 17,000 in Albania, 30,000 around Kossovo, and 30,000 in Asia.

Nothing definite is known of the total commerce of Turkey. The total annual value of the imports is estimated at 537,500,000 francs, of the exports at 496,250,000 francs.

There are 1,243 kilometres of railroad in operation in European Turkey, and 274 kilometres in Asia. There are 334 post-offices and 417 telegraph stations. The length of the telegraph lines is 27,497 kilometres, and of the wires 52,142 kilometres.

The depreciation of the *caimés* (paper money) had already in 1878 produced considerable trouble, and in December of that year the price of a gold lira of 100 piasters suddenly rose to 420 paper piasters, and a crisis seemed imminent. The bakers, who were forced to sell their bread at a certain fixed price—a measure

which was adopted to satisfy the multitude—declared that they would rather close their shops. In this critical situation the Minister of Finance had some 10,000 lira worth of *caimés* bought on account of the Treasury on the Exchange, while the police kept a watch on the money-changers in the streets and bazaars, who by offering *caimés* for sale might disturb the operations on the Exchange. This measure had the desired effect, and in a single day the *caimés* went down from 420 piasters to 176. On January 27th Zuhdi Pasha, Minister of Finance, was dismissed, and his immediate predecessor, Kiani Pasha, was put in his place. Zuhdi had been appointed on the faith of his assurances that he would find ways and means for withdrawing the paper currency, or at least permanently raising its value; and as his efforts had been entirely unsuccessful he was dismissed. One more attempt was made to solve the paper-currency question without a foreign loan. For this purpose an imperial rescript was published about March 22d providing that henceforth four fifths of all sums due to the Government should be paid in coin, and one fifth in paper, calculated at one fourth of the nominal value. On the other hand, the Government would henceforth make all payments in gold and silver, except for debts previously contracted. The immediate effect of this measure was a new and very great depreciation of the paper money, the value of the gold lira rising from 480 to 600 piasters within a few days. In the latter part of April the Government ordered that henceforth *caimés* should be receivable for taxes at the rate of 400 paper piasters for one lira. On April 29th Kiani Pasha was dismissed from the Ministry of Finance, and his predecessor, Zuhdi Effendi, appointed in his place.

On July 23th an imperial *irade* was published suppressing the Grand Vizierate, and appointing Aarifi Pasha Prime Minister and Safvet Pasha Minister for Foreign Affairs.

The financial depression existing throughout the various branches of the Government led to an important step in October, when the Sultan ordered the disbandment of 90,000 regular troops, the Finance Minister threatening to resign unless the Sultan took this step.

A new Cabinet was formed on October 18th, composed as follows: Said Pasha, Grand Vizier; Sawas Pasha, Minister for Foreign Affairs; Mahmoud Nedim Pasha, Minister of the Interior; Aarifi Pasha, President of the Council of State; Safvet Pasha, Inspector-General of Administration; Jevdet Pasha, Minister of Justice; Cadri Pasha, Minister of Commerce; and Edif Effendi, Minister of Finance. Osman Pasha remained Minister of War.

In the beginning of November energetic measures were taken by the British Government to secure the introduction of reforms in Asia Minor, which had been promised by the Porte. Admiral Hornby, the commander of the British Mediterranean squadron, received

orders to take his squadron into Turkish waters by November 8th. Great excitement prevailed at the Porte in consequence, and Sir Austen Layard, the British Ambassador, having been requested by the Porte to explain the object of the dispatch of Admiral Hornby's squadron, semi-officially replied that the squadron would remain for the present at Voulah, but eventually might proceed to some other Turkish port, as England would not tolerate the oppression of the Christians in Asiatic Turkey. Sir Austen Layard said in a dispatch referring to a movement for the formation of an autonomous state in Armenia: "I have warned the Porte over and over again that unless it speedily introduced the reforms to which it has pledged itself in the Asiatic dominions of the Sultan, and can assure the protection and the just and equal government of the populations, the question of an Armenian nationality, and even of other nationalities, may be raised, which will probably end in further diminishing the authority and territory of his Majesty." The Porte, receiving no official explanations regarding the British squadron, telegraphed to Musurus Pasha, the Turkish Ambassador in London, instructing him to ask Lord Salisbury for information. The interview between Musurus Pasha and Lord Salisbury was a very stormy one. The result was that the dispatch of the fleet to Voulah was countermanded, the British Government at the same time stipulating for the fulfillment of certain conditions by the Porte. In its attitude England was supported by Austria, and even Russia was generally thought to have advised the Turkish Government that it would be necessary to introduce the required reforms. In view of the pressure brought to bear upon him, the Sultan concluded to take the steps demanded of him. On November 17th Baker Pasha was appointed the Sultan's representative to superintend the introduction of reforms throughout Asia Minor; and on the 18th an official declaration was published on the proposed measures. The document declared that formal orders had now been given to prepare and execute the measures best fitted for assuring to all classes of the population the benefits of equal justice and for developing in general the prosperity of the country. The Council of Ministers had arranged the necessary reforms in two categories. The first included a project of statutes for the administrative reorganization of the European provinces—statutes which had to be sent into the vilayets and to be there submitted to a preliminary examination by the local commissions. This category likewise included immediate execution of the reforms necessary for the reorganization of the administrative system in Asia and other localities of the empire. The second category comprehended the reorganization of the Ministry and of all branches of the public administration, so as to insure the speedy execution of affairs, the proper distribution of work by the various administrations according to

their respective competence, and the prompt execution of all reforms of a nature to develop the resources of the country. The result of the researches and labors of the Council of Ministers in each of these great categories, having been submitted to his Majesty, had received his supreme sanction. The reality and efficacy of these reforms would speedily be publicly proved by certain and brilliant facts.

In November the Sultan signed a decree providing that from January 13, 1880, 1,350,000 pounds Turkish will be annually appropriated to pay interest half-yearly on the home and foreign debt. This interest will be guaranteed by the revenues of Cyprus and Eastern Roumelia, as well as by the receipts from the duties on tobacco, spirits, stamps, fish, and silk, after a previous reduction from the receipts of 1,100,000 pounds to meet the claims of the Ottoman Bank and other creditors secured by mortgages. In case of a deficit, the Porte will undertake to make it good. Besides the sum of 1,350,000 pounds referred to, the Turkish Government cedes irrevocably to the bondholders the Bulgarian tribute and the Servian and Montenegrin contributions toward the Turkish debt; also one third of the proceeds of any new taxes, especially in the event of increased duties, and the receipts from patents; the mode of payment to be arranged with the creditors. This engagement is to be valid for ten years, unless modified with the consent of all parties interested.

The negotiations for a definite treaty of peace between Russia and Turkey were begun in the first days of January. A sudden end was threatened by a clause proposed by Russia declaring that the two contracting parties guarantee to each other the exact fulfillment of the Treaty of Berlin. This clause was opposed by Turkey, and eventually dropped by Russia. The treaty was finally signed on February 8th. It fixes the indemnity to be paid by Turkey at 802,500,000 francs, and provides for compensation to Russian subjects in Turkey for losses sustained during the war to an amount not exceeding 26,750,000 francs.

The evacuation of Turkish territory by the Russian troops began on March 5th. On that day General Todleben departed from Adrianople, and it was immediately occupied by Turkish troops.

The negotiations with Greece for a new boundary line continued during the year, without leading to a definite result. (See GREECE.)

On April 21st a convention was signed with Austria, relative to Bosnia, Herzegovina, and Novi-Bazar. (See AUSTRO-HUNGARIAN MONARCHY.)

The troubles in Crete were brought to a satisfactory close in June. Photiadès Pasha, Governor-General of the island, explained to the Council of Ministers the modifications in the organic statute desired by the Assembly, and the Sultan, having found them reasonable, determined to sanction them.

U

UNITED STATES. The only change in the Cabinet of President Hayes during the year consisted in the retirement of the Secretary of War, George W. McCrary. The vacancy was filled by the appointment in December of Alexander Ramsey of Minnesota, who was unanimously confirmed by the Senate without a reference to a committee. Mr. Ramsey was born in Dauphin County, Pennsylvania, in 1815. At the age of thirteen years he became a clerk in the office of the county register. He advanced from one place to another until he became secretary of the Electoral College of the State, and carried its vote to Washington. Then he was for several years Clerk of the Lower House of the State Legislature, and was next sent to Congress for two terms, from 1843 to 1847. In 1849 President Taylor made him the first Governor of the Territory of Minnesota. From 1849 to 1853 he made several important treaties with the Sioux and Chippewa Indians. Next he was Mayor of St. Paul, then Governor of the State for two terms. In 1862 he was elected a Senator in Congress, and again in 1869. His term expired in 1875.

Some changes were made in foreign missions, the most important of which was the ap-

pointment in March of Andrew D. White, President of Cornell University, to the vacancy occasioned by the death of Bayard Taylor at Berlin.

The general course of the Administration was uneventful, and the assault upon it at the extra session of Congress resulted in successes for the Republicans at the fall elections. The success of resumption and the abundant crops increased the prosperity of the people, and diminished their anxiety on financial issues.

The result of the extra session of Congress consisted in the passage of the appropriation bills without any provision for the payment of marshals and deputy marshals. An application was therefore made to Attorney-General Devens by the marshal at Detroit, asking whether the latter should continue to serve warrants in criminal cases. The Attorney-General on July 3d replied as follows:

DEAR SIR: I advise you to perform the duties of your office, which you are in no way forbidden to do, to the extent of your power. The law prescribes those duties and affixes certain fees as compensation therefor. No provision for the payment of the fees of marshals and their deputies has been made, nor can I make any contract or promise that this provision shall hereafter be made; but your performance of your duties, so far as the law contemplates that they are to be compen-

sated by fees, seems to me to constitute good ground of obligation against the United States. When the services of deputies are required, and the expenditures are to be made, I recognize the difficulties you may have to encounter. In all this matter, however, you will have to rely upon your expectation of future legislation by Congress that shall be just to you. All other expenses, except fees of marshals and their deputies, have been provided for.

(Signed) CHARLES DEVENS,
Attorney-General.

Under the instructions of this letter the marshals continued to serve as before the failure of the appropriation.

The conflict between the Democratic majority in Congress and the President on the Federal election laws, which necessitated the extra session, ended in the simple omission to vote appropriations for the pay of the United States marshals and their deputies. Having voted the appropriations for the army in a bill divested of the unusual and objectionable conditional legislative clause by which, with a simple constitutional majority, the Democratic members had sought to frustrate the veto power of the President, they embodied the same measure in a separate enactment, which was returned to them with the President's veto. The question in controversy was that of the right of supervision over Congressional elections given to the Federal Government by the statutes of Congress passed for the enforcement of the fifteenth amendment, particularly the act of 1870 entitled "An act to enforce the right of citizens of the United States to vote in the several States of the Union, and for other purposes." The repeal of these laws was made a prominent object of Congress. The vetoed bill, entitled "An act to prevent military interference with elections," provided that it should not be lawful to bring to or to employ at any place where a general or special election is being held in any State any part of the army or navy, unless such force should be necessary to repel the armed enemies of the United States or to enforce section 4, Article IV., of the Constitution, and the laws made in pursuance thereof, and repealing all provisions of law inconsistent with the purposes of the bill. Its object was to repeal the clauses in an act of 1865, and in sections 2,002 and 5,528 of the Revised Statutes, allowing the presence of troops or armed men at elections under the authority of Federal officers when necessary "to keep the peace at the polls." The veto of President Hayes was based principally on the grounds that the bill would prohibit the civil officers of the United States from employing adequate civil force to enable them to keep the peace and execute certain laws of Congress at national elections; and that as a measure to prevent military interference at the polls the bill was unnecessary, since the interference of the military or naval forces with elections was already forbidden by existing laws. The President also took the position that the bill would cripple the Executive in the enforcement of the

laws of the United States, and suspend on certain days and in certain places certain long-established laws, especially section 5,298 of the Revised Statutes. The majority of the Committee on the Judiciary, to which the President's veto was referred (of which Proctor Knott was chairman), held that these laws were no more affected by the proposed statute than by the above-mentioned act of 1865 making it a penal offense for officers of the United States to keep troops or armed men at the place where any general or special election is held, except to repel the armed enemies of the United States or to keep peace at the polls. The committee took the constitutional ground in their report that Congress has no power under the Constitution to confer any authority upon officers of the Federal Government to keep the peace at the polls, or to impose any such duty upon them, since the power to establish such police regulations as may be necessary for the preservation of domestic order and the prevention of violence and crime affecting life or property within their respective limits belongs exclusively to the several States, and the Federal Government can only intervene to protect the State in the execution of its own laws for that purpose upon application of the Legislature, or the Governor when the Legislature can not be convened. They protested against the distinction made by the President between State and national elections. The electoral privilege in all elections was declared to be derived from the governments of the individual States, and the mode of its exercise subject to their statutory provisions; all laws for the preservation of the public peace must also emanate exclusively from the States, and all police regulations and authority belong to the separate States by virtue of their general sovereignty.

The claims of the United States against the Southern States for the war levy of \$20,000,000, to which all the States were called upon to contribute at the beginning of the war of secession, have been remitted on the ground, taken by W. O. Tuggle of Georgia, in an argument before the Treasury Department, that no taxes or assessments lie against a State in its sovereign capacity, but only against the individual tax-payers. The claims, which amounted to about half a million dollars each for the Southern States, with interest, were partly collected by special agents from the tax-payers, but since reconstruction the State authorities have been held liable.

The question of the legality of the issue of United States legal-tender notes in time of peace was brought before the courts in a test case by General B. F. Butler and Congressman S. B. Chittenden of Brooklyn. A test case based on an actual mercantile transaction was presented to Judge Blatchford of the United States Circuit Court. The case was entitled Augustus D. Julliard against Thomas S. Greenman. The plaintiff had sold defendant in New

York one hundred bales of cotton, and had received a small sum on account, the balance to be paid in cash on delivery. The defendant tendered the amount in two legal-tender notes of the series of 1878, which the defendant alleged had been redeemed at the Sub-Treasury and reissued and kept in circulation, in pursuance of an act of Congress, approved May 31, 1878, entitled "An act to forbid further retirement of United States legal-tender notes." He stated that he was willing and ready to pay plaintiff in said notes. Judge Blatchford dismissed the complaint in a *pro forma* decision, Messrs. Butler and Chittenden—the latter of whom had intrusted the management of the case of the plaintiff to Senator Edmunds and William Allen Butler—intending to appeal the case to the United States Supreme Court.

The constitutionality of the Pacific Railroad act of May 7, 1878, known as the Thurman act, was confirmed in the decisions of the Supreme Court rendered in the cases of the Union Pacific Railroad Company, appellants, against the United States, and the Central Pacific Railroad *et al.*, appellants, against Albert Gallatin. The point to be decided was, in the opinion of the Court, "whether a statute which requires the company in the management of its affairs to set aside a portion of its income as a sinking fund, to meet its subsidy bonds and other mortgage debts when they mature, deprives the company of its property without due process of law, or in any other way improperly interferes with vested rights." In less than twenty years from the present time there will become due from the Union Pacific Company about \$80,000,000, secured by first and subsidy mortgages, besides the capital stock, representing \$6,000,000 more. With the exception of the land-grant, little if anything except the earnings of the company can be depended on to meet these obligations when they mature. These earnings the company, after paying the interest on its own bonds, has been dividing from time to time among its stockholders, without laying by anything to meet the enormous debt which is so soon to become due. Thus the stockholders of the present time are receiving in the shape of dividends that which those of the future may be compelled to lose. The United States occupy toward this corporation a twofold relation—that of sovereign and that of creditor. In their relation of sovereign it is their duty to see to it that the current stockholders do not appropriate to their own use that which in equity belongs to others. A legislative regulation which does no more than require them to submit to their just contribution toward the payment of a bonded debt can not in any sense be said to deprive them of their property without due process of law. The Court holds, therefore, that the legislation complained of may be sustained as a reasonable regulation of the affairs of the corporation, and promotive of the interests of the public and the corporators. It is also war-

ranted under the authority, by way of amendment, to change or modify the rights, privileges, and immunities granted by the charter. Chief Justice Waite delivered the opinion of the Court. Associate Justices Bradley, Strong, and Field dissented. Justice Field, in the course of his dissenting opinion, refers to the invasion of the law upon the rights of the State of California, and says: "The Central Pacific Railroad Company is a State corporation, and in creating it the State reserved the same control over it which it possesses over other railroad and telegraph companies created by it. It undertakes to control and manage it in all particulars required for the public service, and can there be any doubt in the mind of any one who has the least respect for the reserved rights of the State that over its own creations the State has supreme authority? I confess that I am utterly at a loss to find where authority on the part of the United States to interfere with the State in this respect and take such control from it is to be found, except in the theories of those who regard the General Government as the all-controlling power of the nation, to which States, even in local matters, must bend."

In view of the excessive accumulation of cases on the docket of the Supreme Court, which is now fully two years in arrears, and would require that time to clear its docket were no new cases to be added, it is proposed to create an intermediate appellate court which would relieve the Supreme Court of all but the weightier cases. The increase in the number of cases docketed in the successive years since 1840 has been as follows: In 1840, 92 cases; in 1841, 106; 1842, 170; 1843, 126; 1844, 168; 1845, 177; 1846, 182; 1847, 216; 1848, 230; 1849, 295; 1850, 252; 1851, 237; 1852, 156; 1853, 195; 1854, 158; 1855, 161; 1856, 256; 1857, 279; 1858, 314; 1859, 368; 1860 and 1861, 310 each; 1862, 336; 1863, 361; 1864, 388; 1865, 389; 1866, 451; 1867, 438; 1868, 538; 1869, 536; 1870, 636; 1871, 757; 1872, 676; 1873, 756; 1874, 831; 1875, 974; 1876, 1,046; 1877, 1,093; 1878, 1,133.

During the fiscal year which closed with June, the receipts from the sales of postage-stamps, stamped envelopes, and postal cards amounted to \$29,539,050, being an increase of \$971,866 over the receipts of the year 1877-'78. According to recent changes made by Congress in the laws regulating the postal service, domestic mail matter is rated in four classes. First-class matter includes letters or matter containing any writing in the nature of personal correspondence, and matter which is sealed against inspection. It is subject to the rate of three cents postage on each half ounce and fraction thereof. Second-class matter embraces matter sent by purchasers and news-dealers. Third-class matter embraces books, printed and blank, transient newspapers and periodicals, circulars and other matter wholly in print, proof-sheets and corrected proof-sheets and manuscript copy accompanying the same, prices current with

prices filled out in writing, papers of legal proceedings, deeds of all kinds, way-bills, bills of lading, invoices, insurance policies, handbills, posters, envelopes with printing thereon, engravings, lithographs, etc., printed blanks, printed cards, etc. There may be placed upon the cover or blank leaves of any book or of any printed matter of the third class a simple manuscript dedication or inscription that does not partake of the nature of a personal correspondence. All packages of third-class matter must be so wrapped with open sides or ends that their contents may be readily examined. The postage on third-class matter is one cent for each two ounces and fraction thereof. The limit of weight of packages is four pounds, except in cases of single volumes of books in excess of said weight. Fourth-class matter embraces blank cards, cardboard, flexible patterns, letter-envelopes and letter-paper without printing thereon, merchandise, models, ornamented paper, sample cards, ores, metals, minerals, seeds, cuttings, bulbs, roots, scions, drawings, plans, designs, original paintings in oil or water-colors, and other mailable matter not included in the first, second, and third classes. The postage rate is one cent for each ounce and fractional part thereof. Mailable matter of the first, third, and fourth classes can be registered. Unmailable matter embraces liquids, poisons, explosive and inflammable articles, putty, substances easily liquefiable, live or dead animals (not stuffed), insects and reptiles, fruits or vegetable matter, confectionery, and substances exhaling a bad odor; and every letter upon the envelope of which, or postal card upon which, indecent or obscene delineations, epithets, terms, or language may be written or printed; also matter which from its form or nature is calculated to injure the contents of the mail-bags or harm the persons of those employed in the postal service, unless securely wrapped to prevent such injury.

The Secretary of State addressed a circular to the United States ministers abroad instructing them to call the attention of the governments to which they were accredited to the laws of the United States against polygamy, and to whatever facts they might be informed of, through the consular agents or otherwise, concerning the emigration of Mormons from the respective country to the United States, and to prefer a request to the several governments to put in force what laws they have against the gaining of converts and the organization of emigration by the Mormon agents and missionaries. Some of the governments replied to the representations of the ministers that it was inconvenient for them to inquire into the religion of people leaving their shores, or their place of destination. Such letters were sent to the diplomatic agents in Great Britain, Germany, Norway, Sweden, and Denmark. It was intended to take active steps to prevent the landing of Mormon emigrants in United States ports. The circular letter expressed the

determined purpose of the United States Government to enforce the law against polygamy contained in section 5,352 of the Revised Statutes, the constitutionality of which had been recently sustained by a decision of the Supreme Court, and to eradicate the institution of Mormonism.

The intercession of the State Department was required in the case of the brothers Bersselier, natives of St. Louis, of German parentage, whose father had taken up his residence in Germany again while they were children. Before attaining their majority they returned to St. Louis, where they had since resided. When they attained the military age the German magistracy took steps to enforce penalties against the property of their father in Germany, after their failure to present themselves for enrollment. On a statement of the facts of the case by the Minister at Berlin, the German Government interfered to prevent the proceedings of the local magistrates against the property or heritage of the younger Bersseliers.

The causes of the decay of the American ocean-carrying trade were discussed by Senator James G. Blaine in a letter to a number of business men of New York who had invited him to express his views on that subject in a public meeting. He attributes the decline to the combined causes of the civil war, the substitution of iron and steam for wood and sails, and the inflation of prices brought about by a paper currency. In 1857 the entire foreign trade of the United States, export and import, amounted to \$723,000,000, and of this total \$510,000,000 was carried in American bottoms and only \$213,000,000 in the ships of other countries. When the country was precipitated into war in 1861 there followed a series of events the effect of which was utterly disastrous to the American carrying trade. Nearly 70,000 seamen were withdrawn from the merchant service and enlisted in the navy to maintain the blockade that stretched from Delaware Bay to the mouth of the Rio Grande. More than a million tons of American shipping were withdrawn from commerce to take part in the blockade and to supply the transportation needed for the maintenance of the armies that were called to the defense of the Union. Added to the direct loss, 800,000 tons of American shipping, to escape destruction at the hands of cruisers flying the Confederate ensign, but built in British yards and manned by British sailors, canceled their American registry and sailed under the flags of other nations, and when worn out their place was supplied by foreign-built ships. Just at this time the screw was generally substituted for the paddle, and the compound engine took the place of the simple one. Iron now became a general substitute for wood, and hulls were built that would last as long as the engines. A steamer of the old kind, capable of carrying 3,000 tons, might sail on a voyage so long that she would be com-

pelled to carry 2,200 tons of coal, leaving room for only 800 tons of freight; whereas one of the new kind, of the same capacity, would make the same voyage and reverse the figures, requiring only 800 tons of coal and carrying 2,200 tons of freight.

Under the continued operation of these causes, the American carrying trade has steadily declined, until in 1878, with an aggregate foreign commerce, outgoing and incoming, of well-nigh \$1,200,000,000, American ships carried but little over 300 millions and foreign ships carried nearly 900 millions; or, to be accurate and specific, American ships carried \$313,050,906, and foreign ships carried \$876,991,129. In 1857 American ships carried five sevenths of all we exported and all we imported, and ships of all other countries carried but two sevenths. In 1878 American ships carried less than two sevenths, and ships of all other countries more than five sevenths. The cargoes transported in American ships, with an increase of 70 per cent. in the amount of the foreign commerce, was 200 millions less in value in 1878 than in 1857. The profits on the carrying trade of American commerce have amounted since 1869 to nearly 1,200 million dollars, three quarters of which vast sum have gone to enrich Great Britain. The remedy for the poverty of American shipping Mr. Blaine does not look for in the repeal of the navigation laws and the free registry of foreign-built steamers, as such a course would make the United States entirely dependent on England for iron steamships, which require as many men on land to build and repair them as they do on the water to navigate them, and would leave America unprovided with the skill and knowledge necessary for the construction of war-ships. He recommends the example given by the European governments in subsidizing the ocean mail service, Great Britain paying for the last year to the various steamship lines \$3,700,000 besides ocean postage, France over \$4,500,000, Italy \$1,500,000, Austria \$500,000, and Belgium \$200,000. Wooden-ship building, he thinks, will always remain a valuable interest. "For wooden sailing ships no further aid is needed than these laws afford, if we will only seek in every way to lighten the burden of taxation on vessels. We can build wooden ships better than any other country, and we can build them as cheaply; but after they are launched and in trade they should not be worried and harried and burdened with every form of taxation, port-charge, and quarantine exaction at home, and maltreated and oppressed, as they too often are, by our consuls in foreign ports. They should have every facility for supply in our ports that England gives to her ships. Wooden ships will always be used so long as trees grow and winds blow, and they will form a large resource to our country. Indeed, it is almost the only resource we now have in foreign trade, and we should cherish the interest as one inwoven with our history

and prosperity as a people." For the encouragement and development of iron steamship construction, in which class of vessels the larger half of the world's commerce is now conducted, he proposes a general subsidy which he declares is less than the sums paid by the Government for transporting smaller mails equal distances on land. "I would prefer a general law that should ignore individuals and enforce a policy. For instance, enact that any man or company of men who will build in an American yard, with American material, by American mechanics, a steamship of 3,000 tons, and sail her from any port of the United States to any foreign port, he or they shall receive for a monthly line a mail allowance of \$25 per mile per annum, for the sailing distance between the two ports; for a semi-monthly line, \$45 per mile; for a weekly line, \$75 per mile. Should the steamers exceed 3,000 tons, a small advance on these rates might be allowed; if less than 3,000, a corresponding reduction; keeping 3,000 tons as the average and the standard. Provide that the steamships shall be thoroughly inspected by a competent commission under the direction of the Secretary of the Treasury, the Secretary of the Navy, and the Postmaster-General, and thus insure the very first class of construction for safety and for speed both for passenger and cargo."

At the time of the organization of the Forty-sixth Congress the Executive Committee of the National Greenback-Labor party, presuming that the nearly equal strength of the Republican and Democratic parties in Congress would place the balance of power in their hands, determined to manifest their strength in the organization of the House of Representatives. A letter, signed by James B. Weaver for the committee, dated March 14th, was sent to the Democratic and Republican members of the House, giving the names of a number of members from whom they were willing to select the Speaker, and containing the following declarations:

The Representatives of the National Greenback-Labor party feel that grave responsibility rests upon them in the organization of the House of Representatives. The Republican party is fully committed to the financial policy which has brought disaster and ruin upon all the industrial interests of the country. It is opposed to an exclusive Government money, is in favor of the issue of national-bank currency, and is the champion of monopolies. The Democratic party in its last National Convention proposed no remedy for existing financial evils, but, on the contrary, rejected propositions looking to currency reform. Both the old parties in many of the States, by earnest advocacy of our principles, have been able to defeat our party candidates and elect their own. The time has now come when devotion to principle must be tested and a suffering people be informed who are in favor of relief for them. We hold the balance of power, not only in the present House of Representatives, but in the States of Maine, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, and Michigan. In other words, in scarcely one of the Northern States has either of the old parties a majority. We intend to follow out our principles, and place the responsibility of their temporary defeat upon those who shall organ-

ize the House against them. There must be no mistaking our single and resolute purpose by our action to bring relief to our suffering constituents by giving full employment and adequate reward to labor, impart new life and vigor to the prostrate business industries of the country, and give hope to the despairing debtor.

The extraordinary growth of the local public debts in the United States has been recently animadverted upon as imposing an unbearable burden upon the industry and business of the country, and as constituting one of the chief causes of the late protracted commercial depression. The municipal debts of 130 cities of the Union are found to have increased between 1866 and 1876 from an aggregate of \$221,312,009 to \$644,378,663. The assessed value of the property of the same in 1876 was \$6,175,082,158, in 1866, \$3,451,619,831; annual taxation of the same in 1876, \$112,711,275, in 1866, \$64,000,914; population of the same in 1876, 8,576,249, in 1866, 5,919,914; increase in debt, 200 per cent.; in taxation, 83 per cent.; in valuation, 75 per cent.; and in population, only 33 per cent. The municipal debt alone of 130 cities, representing a population of only 8,576,249, exceeded in 1876 by over \$28,000,000 the county, town, and city indebtedness of the entire country in 1870. In six years the indebtedness of these cities had exceeded by over \$316,000,000 the bonded and floating indebtedness of all the towns and cities in the United States in 1870, which, according to the census, amounted to \$515,810,000.

The municipal and county debts in eleven States of the Union in 1878 are computed and compared with the same in 1870 as follows:

STATES.	Total local debt, 1873.	Total local debt, 1870.
New York.....	\$244,079,569	\$127,899,090
Massachusetts.....	69,601,158	40,940,657
Illinois.....	51,811,691	37,300,982
Ohio.....	41,205,840	12,539,910
Wisconsin.....	9,981,153	3,651,475
Minnesota.....	5,272,330	2,436,795
Kansas.....	13,473,197	4,843,976
Missouri.....	85,343,155	29,043,565
Connecticut.....	17,151,327	9,512,006
Georgia.....	26,130,351	15,209,212
Rhode Island.....	12,289,564	8,025,142
Total.....	\$546,259,523	\$286,179,060

The following is the valuation of the property in the above-named States for the two periods:

CROPS.	HARVEST OF 1878.		HARVEST OF 1870.	
	Quantities.	Value.	Quantities.	Value.
Wheat.....	420,122,400 bush.	\$326,846,424	443,755,000 bush.	\$499,008,000
Corn.....	1,383,218,750 "	441,183,105	1,544,609,000 "	580,289,000
Oats.....	413,078,560 "	101,945,830	864,258,600 "	120,855,000
Rye.....	23,842,790 "	13,592,826	23,640,500 "	15,553,000
Barley.....	42,245,680 "	24,483,815	40,184,000 "	23,605,300
Buckwheat.....	12,246,820 "	6,451,120	13,145,650 "	7,800,488
Cotton.....	5,216,603 bales.	190,854,641	5,020,387 bales.	231,000,000
Tobacco.....	892,548,700 lbs.	22,187,473	854,089,659 lbs.	21,454,591
Hay.....	89,608,098 tons.	285,243,752	85,648,000 tons.	325,831,250
Potatoes.....	124,126,650 bush.	78,059,125	131,860,000 bush.	75,971,000
Total.....	\$1,488,570,566	\$1,904,450,659

STATES.	Total assessed valuation of property, 1878.	Total assessed valuation of property, 1870.
New York.....	\$2,755,740,318	\$1,967,001,158
Massachusetts.....	1,508,988,210	1,591,983,112
Illinois.....	1,201,123,110	482,869,515
Ohio.....	1,574,645,763	1,167,781,697
Wisconsin.....	428,596,290	833,209,883
Minnesota.....	220,930,629	64,135,382
Kansas.....	187,826,648	92,125,963
Missouri.....	614,726,225	556,129,909
Connecticut.....	344,406,977	425,433,237
Georgia.....	235,659,530	227,219,519
Rhode Island.....	256,052,818	244,278,854
Total.....	\$9,338,696,515	\$7,172,148,179

Incomplete returns from other States show the municipal debt of twenty cities in Pennsylvania to aggregate \$87,329,180; nine cities in New Jersey, \$36,502,722; two cities in Maryland, \$34,000,000; five cities in Louisiana, \$20,000,000; and five cities in Kentucky, \$12,000,000. According to this calculation, the total local debt of the country at the close of the year 1878 was \$1,051,106,112, exclusive of State debts.

The estimates of the year's crops, made in December, compared with the returns of the foregoing year, show an increase of over 6 per cent. in quantities and 26 per cent. in values. There was an increase of 12 per cent. in the acreage sown to winter wheat; the Hessian fly injured some of the early-sown crops, and the later-sown suffered from drought; nevertheless, the general prospects were above the average. The tobacco-crop showed but a slight improvement in average quality over the crop of 1878, though a marked improvement was observed in some of the States. The oat-crop was 12 per cent. less than in 1878. The area sown to potatoes was 3 per cent. greater than the previous year; the yield per acre was 98 bushels, against 69 in 1878 and 94 in 1877. The acreage under winter rye was 3 per cent. less, but greater in New England, Texas, and the States north of the Ohio River; the condition of the crop was generally above the average. The hay-crop was 10 per cent. less, New England and the Gulf States only having increased their area; the crops of the Southern inland States and north of the Ohio were injured greatly by drought, and showed a falling off of 20 to 30 per cent.; the average price per ton was \$9.24, against \$7.21 in 1878. The total estimates are as follows:

V

VERMONT. The term of office of the Governor, Redfield R. Proctor, expires in 1880. The other State officers are as follows: Lieutenant-Governor, Eben P. Colton; State Treasurer, John A. Page; Secretary of State, George Nichols; Deputy Secretary of State, Charles W. Porter; Auditor of Accounts, E. H. Powell; Sergeant-at-Arms, T. C. Phinney; Inspector of Finance, William H. Dubois. All these officers were elected on the Republican ticket. The representatives of the State in the United States Senate are George F. Edmunds, whose term expires in 1881, and Justin S. Morrill, whose term expires in 1885. The Legislature is divided between the political parties in the following proportions: Senate—Republicans 29, Democrat 1; House—Republicans 175, Democrats 43, Nationals 9, Independents 5.

There was on hand in the State Treasury on the 1st of August the sum of \$68,750.39, with liabilities of \$206,136.95. Of the latter \$135,500 consisted of the Agricultural College fund, due in 1891. The ordinary expenses paid during the year were \$451,841.33; and in addition a temporary loan of \$125,000 was paid and bonds of the State to the amount of \$36,000. There remained outstanding, besides the Agricultural College fund, State bonds to the amount of \$4,000, on which interest ceased December 1, 1876. Court expenses form \$102,446.73 of the sum expended, being less by about \$10,000 than those of each of the two preceding years.

The decennial increase in the population of the State for eighty years has been as follows:

CENSUS.	Population.	Increase.	Percentage.
1790.....	85,416
1800.....	154,465	69,049	80.84
1810.....	217,718	63,248	40.95
1820.....	235,764	18,051	8.20
1830.....	280,652	44,888	19.04
1840.....	291,945	11, 96	4.02
1850.....	314,120	22,172	07.59
1860.....	315,116	996	0.32
1870.....	331,000	15,884

In answer to questions asked him by farmers in the Dairymen's Association with regard to the effect on the freight-rates on their competition with Western produce, ex-Governor Smith stated that although Western butter comes at very low rates from Chicago eastward, it pays as heavy a freight before reaching that city as Vermont butter pays in going to Boston. He declared that local freights had not been advanced on the Eastern lines to make up for losses on through freights. Local freights on the roads passing through Vermont are nevertheless reported to have been raised in the course of several years, whatever the motive may have been. The number of different lines to which freight must be transferred in

going to market is supposed to work unfavorably for Vermont producers; and the consolidation of the different main lines passing through the State under a single management is spoken of as a measure which would enable them to compete in fruits and other produce in the Boston market. Governor Smith has attempted to consolidate different roads by leasing, but without success.

Some statistics as to the relative cost and profits of farming in Vermont and in the West have been collected by Professor Dale. In the Government report for 1877 the yield of Indian corn per acre, value per bushel, and value of the crop per acre were given for the below enumerated States as follows:

STATES.	Average No. of bushels per acre.	Price per bushel.	Value per acre.
Vermont.....	89	\$0 77	\$80 13
Michigan.....	81	0 89	12 09
Iowa.....	82.05	0 25	8 01
Kansas.....	86.05	0 21	7 37

The cost of cultivation in Vermont per acre is as follows: Plowing and harrowing, \$2; manure, \$10; planting, \$1.50; cultivating and hoeing, \$5; cutting and harvesting, \$5; husking, \$2.25; in all, \$25.75, to which must be added \$3 for interest on land, making \$28.75. To the value of the corn-crop \$15 per acre is to be added for the value of the stalks for fodder, making the total value of the harvest \$45.13 per acre. The profit per acre in Vermont is thus \$16.38. In Kansas the cost of cultivation on stubble-land is as follows: Plowing, \$1; planting, 20 cents; cultivating, \$1.50; husking, \$1.25; interest on the land, \$1; total, \$4.95. Deducting this from the value of the crop, \$7.37, there remains a profit of \$2.62. The value of the stalks in Kansas does not more than market the corn, if it does that. Land fenced and under cultivation is reckoned worth \$12 an acre, a low estimate. What is true of Kansas is true of Iowa. In Michigan the cost of producing is nearly the same, except that the land is held at a much higher value, and manure is frequently used. The cost of cultivation is probably \$9.25; value of crop, \$12.09; profit, \$2.84. If these estimates are correct, an acre of corn in Vermont will pay 20 per cent. profit, in Kansas 15, and in Michigan not quite 3 per cent. In the older of the Western States the average yield of corn has decreased 20 per cent. in the last fifteen years. In estimating the cost of manure in Vermont, the amount is taken at what it would cost to restore to the soil the phosphoric acid, potash, and nitrogen taken from it by the grain-crop alone, supposing the stalks to be fed or used upon the ground. Nitrogen is valued at

25, phosphoric acid 12, and potash 6 cents per pound. In the West the stalks are not taken from the ground, but are plowed under in the spring, much to the discomfort of the man holding the plow. Experiments show that only a small percentage of the nitrogen found in the crop is absorbed from the soil; and, as that is the highest-priced ingredient in all commercial manures, it would very much lessen the cost of raising corn if a considerable part of it could be omitted.

The following is the reported yield and value of the wheat-crop in the respective States for the same year:

STATES.	Bushels per acre.	Price per bushel.	Value per acre.
Vermont.....	17	\$1 60	\$27 40
Michigan.....	17·5	1 22	21 85
Iowa.....	14·5	87	11 75
Kansas.....	18·5	85	11 05

The cost of raising wheat in Michigan, where good land is held at \$80 to \$100 per acre, and where no manure is used and the crop is alternated with clover, is as follows: Plowing and harrowing, \$2; seed, \$2.44; harvesting, \$2; threshing, \$1.75; interest on land, \$5. This makes a total cost of \$13.15, leaving a profit of \$8.20, which, however, is only to be counted once in two years, as the crops are only taken off the land every alternate year. In Iowa the cost of plowing, harrowing, harvesting, and threshing is \$5.25, of seed \$1.74, and the interest on the land \$1, making the total cost of cultivation \$8.99 and the profit \$2.76. In Kansas nearly the same figures hold true. In Vermont the cost of growing and harvesting is estimated at \$19.95, making the profit \$7.45.

In an agricultural meeting at Montpelier, Professor Collier of Washington described some experiments he had made in raising sorghum. He tried five kinds—early amber, Chinese, white Liberian, Honduras, and pearl-millet. He made analyses of the cane at several stages of its growth. The pearl-millet yielded the best results, which were better than any published analysis of the sugar-beet, and equal to that of Louisiana sugar-cane. The juice analyzed between the 15th of August and the 1st of November showed 14·67 to 17 per cent. of crystallizable, and from 65 to 154 per cent. of non-crystallizable sugar. The Honduras variety yields the heaviest crop of cane, but will only grow in the Southern States. The early amber, which will grow wherever Indian corn can be raised, will produce with good cultivation two tons of sugar to the acre. Professor Collier has made many experiments also with corn-stalks. Stalks when ripe, after the corn has been harvested, yielded 10·90 per cent. of good sugar. From the results of forty-five experiments in making sugar from sorghum-cane, he believed that wherever Indian corn will grow the cane will yield an average of sugar per acre equal to or above that of the sugar-lands of Louisiana. The process of ex-

tracting the juice and making the sugar is not at all difficult. There should be a good strong mill to get out the juice, which as soon as got out should be heated nearly to the boiling-point, and slacked lime mixed to the consistence of thick whitewash should be added; after which it should be brought to boiling, and the scum taken off as is usual in maple-sugar making. After this it should be taken off and allowed to cool and settle, where the clear liquid could be drawn off and then boiled down in an ordinary pan or evaporator; and by this process nineteen twentieths of the sugar could be secured. He would not advise the farmers to make sugar, but sell the sirup to the refiners, who could do the work more cheaply and effectively. The refiners would now buy 100,000 barrels of high-grade sirup at good prices. After the juice is pressed from the corn or sorghum stalks, he believes, analysis shows them to be worth ton for ton as much as before they were pressed, though of course the amount would be much less. The pressed stalks or "bagasse" were just in the condition for feeding or for putting up in "silos" used for preserving corn-fodder green. Professor Collier expressed the opinion that in ten years the United States, instead of importing 811,767 tons of sugar as in 1877, might export a million tons; the State of Illinois might yield an amount equal to the entire present import.

The State Grange, at a meeting in Montpelier, gave expression to the old grievance against the railways in the following memorial to be presented to Congress:

To the Honorable the Senate and House of Representatives of the United States of America, in Congress assembled:

We, the citizens of — county, State of —, do most earnestly and persistently insist that the Congress of the United States enact such laws as will alleviate the oppressions imposed upon us by the transportation monopolies that now control the interstate commerce of our country. Railroads, or railways, as they are severally styled, exact fluctuating and excessive rates of transportation both for freights and passengers, and in all such arbitrary exactions are a law unto themselves, being beyond the reach of State legislation, and heretofore unrestrained by Congressional enactments.

While general prosperity pervades the land, agriculture, the corner-stone of our national progress, is depressed. The surplus of our farms is wrenched from us to enrich these giant monopolies. A buoyant market instantly enhances the freight-rates of transportation, robbing the producer of well-earned profits, and levying upon the consumer unjust taxation. A depressed market maintains the previously enhanced freight-rates, and in neither case do these common carriers attempt to promote the public weal.

The patience of an industrious, law-abiding people is sorely tried, and with anxiety they look for relief to your honorable bodies, from whom alone relief can come. That it will come in the near future, we have every reason to hope. To hasten its coming, we respectfully urge upon your bodies the enactment of such laws as will prevent fluctuations in freights, and unjust discriminations in transportation charges.

And your petitioners would ever pray.

Merino-sheep breeding is again becoming profitable, and very high prices are paid for

the finest animals. A new breeders' association, with E. S. Stowell for president, called the Vermont Atwood Merino-Sheep Breeders' Club, has been formed in opposition to the Vermont Merino-Sheep Breeders' Association, with which fault is found owing to the admission on its register of sheep outside of the State.

A contention arose in November between the students and the faculty of Middlebury College. A student in the second year received demerits for some trifling breach of the rules, and afterward an additional number of demerit marks given to the whole class alike in consequence of a disturbance. The total was sufficient to suspend the student. His classmates considered this an injustice, and refused to attend college unless he were received back. The faculty tried to assert their authority by suspending the whole class, whereat the other classes joined the rebellion and refused also to go on with their studies unless the faculty yielded. The affair finally ended in a compromise.

The Burdett-Estey organ suit, which has been for a long time before the courts, was ended by the award of about \$150,000 to the plaintiff by ex-Governor Stewart, Master in Chancery. The suit was brought in the name of Riley Burdett, whose rights had been transferred to Silas M. Waite, against Jacob Estey, Julius J. Estey, and Levi K. Fuller, for infringement of a patent on an arrangement of extra reeds in organs, which by being tuned a little above or below the diapason produce the wavy effect called by the plaintiff the "harmonie céleste" and by the defendants the "vox jubilante." On this contrivance, used in the manufacture of the Estey organ at Brattleboro, it was claimed that the plaintiff possessed letters patent. The case was first brought in the United States Circuit Court of Vermont, December 30, 1871. It was heard successively by Judges Smalley (in 1874), Woodruff, and Johnson, all of whom died before rendering a decision. Early in 1878 it was argued before Judges Blatchford and Wheeler at New York by distinguished lawyers, including Senator Edmunds, William M. Evarts, and E. W. Stoughton. Judge Blatchford affirmed the validity of the patent in part, and an accounting to determine the profit made by the Esteys on the improved mechanism was ordered, the result of which inquiry was the report of the Master in Chancery awarding the sum named, subject to the approval of the Court.

The case of James R. Langdon *et al.* vs. the Vermont and Canada Railroad Company *et al.* came up before the Supreme Court. This was a bill in chancery brought to establish the priority of the liens upon the trust property, or, in other words, to have the Supreme Court determine which should be paid first out of the avails of the Central and Canada roads and their property, the accrued rent due the Vermont and Canada, or the receiver's indebted-

ness, so called, which, in the shape of floating debt, equipment bonds, Stanstead, Shefford, and Chambly bonds, guaranteed bonds, and income and extension bonds, amounts to about \$6,000,000.

The Bennington village election was made the subject of a legal dispute. An action of *quo warranto* was carried before the Supreme Court. The State set forth in the complaint that, by reason of the mob capturing the village meeting in April, 1879, no legal election was held. The defense answers that the said noise and confusion was no greater than usual on such occasions, and that a legal election was held. The moderator whose election was contested was S. F. Harris.

A new State workhouse has been built at Rutland. It is a brick building with walls 20 inches thick, the walls between lines of cells being of the same thickness. A corridor runs between the outer tiers of cells and the wall of the building. The cells are 72 in number and disposed in three double tiers. The cells are 7 feet by 5, and are ventilated by tubes communicating with the outside air at the roof.

VIRGINIA. The question of the settlement of the State debt still engrosses the public mind. The citizens are divided into two parties on this issue, called the Debt-Payers and the Readjusters. In the early part of the year a funding bill passed the Legislature by a considerable majority and received the approval of the Governor. The proposed method of funding the debt was accepted by a syndicate, composed of a Council of Foreign Bondholders and the Funding Association of the United States, representing nearly all the holders of Virginia State securities. The bill, which is known as the McCulloch bill, aroused the liveliest dissatisfaction after it had become a law. A strong agitation was set on foot for its repeal by the Readjusters. This was made the main issue on which members were elected to the General Assembly in November. The plan for funding the debt embodied in the McCulloch bill is to issue registered and coupon bonds dated January 1, 1879, the principal payable in 1919, with interest at 3 per cent. for ten years, 4 per cent. for the next twenty years, and 5 per cent. for the last ten years, payable at Richmond, New York, or London on January and July 1st in each year until the principal is redeemed. The State has the option to redeem any or all of the bonds by paying the principal and accrued interest at any time after the expiration of ten years from January 1, 1879. The coupons will be receivable at maturity for all taxes, debts, dues, and demands of the State. The holders of registered bonds are entitled to receive a certificate for interest, and this certificate will be good for taxes or other demands due the State. The bonds, coupons, and certificates are non-taxable. The law was to be binding if, on or before May 1, 1879, the Council of Foreign Bondholders and

the Funding Association filed their assent with the Governor; and they might present for funding at least \$8,000,000 of the outstanding obligations of the State on or before January 1, 1880. Every six months thereafter they may fund \$5,000,000 until the whole debt of \$34,000,000 is funded. In the year 1885, and annually thereafter until all the new bonds are issued, there will be collected a tax of 2 cents on the \$100 of the assessed valuation of all property for a sinking fund.

The position of the Readjusters in their opposition to the funding scheme was defined in the following resolutions adopted at their convention held in Richmond, February 25th:

1. That Virginia fully recognizes her just liability for her fair proportion of the public debt contracted before her territory was divided.

2. That Virginia can never recognize liability for that portion of the debt which should attach to West Virginia.

3. That in any settlement with the State's creditors, the annual interest of the recognized indebtedness must be brought within her revenues under the present rate of taxation.

4. That the capacity of these revenues to meet such interest must be determined by deducting therefrom the necessary expenses of the government, the apportionment to schools, and reasonable appropriations for the support of the charitable institutions of the State.

5. That these limitations should be carefully ascertained and guarded so as in no event to allow the primary obligations of the government and people to be subordinated to any other demands whatever.

6. That a settlement within the limitation designated is the utmost stretch of the people's ability to pay, and should be satisfactory to the creditor as the furthest exaction he can fairly insist on.

7. That any settlement, to be final, must rest upon the sovereignty of the State, and find its best security in the good will, good faith, and honor of the people of Virginia.

8. That the sovereignty of the State can not be pledged nor delegated except for public service, and when so pledged or delegated is at any time revocable by the Legislature.

9. That any self-executing lien upon public revenues, such as is given by tax-receivable coupons, is against public policy and degrading to the State and people.

10. That no discrimination between creditors can be made or sanctioned by the State, in any readjustment that may be consummated.

11. That Virginia should deal directly and frankly with her creditors, and should never place either their claims or her revenues and obligations in the hands of intermediaries who are not completely under her control and direction.

12. That all exemptions from taxation not authorized by the Constitution are intolerable, and can not be afforded in the present condition of the State's finances.

13. That the rate of taxation is as high as can be borne, and, instead of entering into an undertaking that may necessitate an increase of taxation, a diminution in public burdens should be provided for.

14. That public free schools should be protected and sustained to the fullest extent.

15. That reform and economy should be energetically pressed in the administration of affairs of State and country.

16. That full recognition of these principles and declarations by the people of Virginia and her creditors is absolutely essential to any amicable readjustment, and no readjustment in which they or any of them shall have been neglected can be final, certain, and satisfactory.

The amount of the debt funded in accordance

with the McCulloch bill was \$8,491,961 at the time of the meeting of the Assembly on December 3d, the sum of \$8,000,000 required to make the contract binding having been reached before the 1st of October. The total revenue of the State, based on the returns for 1878, is \$2,762,519, derived from the following principal sources: Tax of 50 cents per \$100 on total value of real estate (assessed as \$244,563,717), \$1,222,818; tax of 50 cents per \$100 on personal property (assessed as \$71,013,105), \$355,065; tax of 1 per cent. on incomes exceeding \$600 (aggregating \$2,971,263), \$29,712; capitation tax of \$1 per head on male citizens over twenty-one years old (whites 175,970, colored 109,401), \$285,371; licenses (regular merchants \$332,717, licenses and registered sales under Moffet liquor law, less expenses and rebates, \$340,766), \$673,484; taxes derived from railroads, banks, insurance companies, etc., \$120,000; revenue derived from other sources, \$75,000. Deducting from the gross revenue the expenses of collection, errors in assessment, and defaults of insolvents and delinquents amounting to \$237,951, a net revenue remains of \$2,524,568, or, with the tax on coupons added, \$2,586,078. The estimated expenses of government are \$701,118, and the amount estimated to be due to the public free schools annually is \$487,442, leaving an annual surplus applicable to the payment of interest on the debt, and to the extraordinary expenses of government (averaging for nine years \$74,369 per annum), amounting to \$1,397,517.

The state of the debt and interest charge stood on the 1st of October, 1879, as follows: Amount of bonds funded at 3 per cent. under the act of March 28, 1879 (dollar bonds \$7,674,449, sterling bonds \$375,000—\$8,049,449, less \$105,134 bought in by the Commissioners of the Sinking Fund), \$7,944,314, the annual interest on which amounts to \$238,329; principal of sterling bonds outstanding, \$1,472,805, the interest on which at 5 per cent. amounts to \$73,640; amount of dollar bonds issued under act of March 30, 1871, still outstanding, \$20,250,184, the interest on which at 6 per cent. amounts to \$1,215,011. The total principal under both acts amounted to \$29,667,304, and the interest due annually thereupon to \$1,526,980, which, deducted from the net revenue, stated above, applicable to the payment of interest, leaves a deficit of \$129,463. Adding the interest at 5 and 6 per cent. on the debt held by the literary fund (principal \$1,428,245), amounting to \$84,349 per annum, the deficit increased to \$213,813; if the interest on the literary fund is reduced to 3 per cent., the deficit is reduced to \$172,310. Were the entire debt funded under the act of March 28, 1879, including one half of the interest in arrears on the bonded debt and full interest on the college and literary funds, the total principal would amount to \$31,227,083; the interest on the refunded debt at 8 per cent. would amount to \$936,812 per annum, the full interest payable under existing

laws to colleges to \$54,572, and the full interest due to the literary fund, as stated above, to \$84,349, making a total interest charge of \$1,075,735; this sum, deducted from the estimated net revenue stated above, minus the tax on consolidated bonds which would be lost on refunding (which amounts to \$61,509 per annum, leaving a future net revenue of \$1,336,007 applicable to interest payments), would leave an annual surplus revenue of \$260,272. If the entire debt, including the consolidated bonds and the debt held by the literary fund and the colleges, were refunded, with half of the arrears of interest added, the bonded debt of the State would amount altogether to \$32,881,695, on which the interest at 3 per cent. would amount annually to \$986,450; this, deducted from the revenue available for interest, would leave an annual surplus in the Treasury at the present rates of taxation of \$350,924.

Governor Frederick W. M. Holliday in his message expressed his views on the subject of funding the debt as follows:

I am not of those who believe that a heavier rate can not be borne to accomplish so grand an object as the fulfillment of the State's obligation and the preservation of her credit—objects which, in a republic like ours, far transcend every private consideration; indeed, which elevate private considerations, and make them partake of the strength and virtue of the Commonwealth itself. The investment of more taxes in such a cause would yield a far greater revenue than that invested in any war in which our ancestors ever engaged for the vindication of the right, both in the material development of our resources, and the hardy, robust, and honest growth of our people's character. That increase, however, need not be resorted to now. With the present laws properly enforced, the revenues will meet the requirements of the act, and leave a handsome surplus in the Treasury. . . . Whatever may be the views of some, I feel that should the present funding bill by any means be stopped in its execution, it would be a great misfortune. It has been regarded by the world as a fair and honorable settlement between the Commonwealth and her creditors; and though the funding under it has progressed with remarkable rapidity, considering the impediments that have been thrown in its way, we have every reason to believe that had no opposition been manifested, and its repeal not been mooted, the bonds by this time would have been well-nigh all brought in to be funded under its provisions.

The popular vote in the November election, which depended on the State issue of the settlement of the debt, was divided between the Debt-Payers and Readjusters into 69,763 of the former (62,074 Conservatives and 7,689 Republicans), and 77,070 of the latter (58,644 Conservatives and 18,426 Republicans). The total vote cast for members of the House of Delegates was 147,115. The composition of the new House of Delegates was as follows: Conservative Debt-Payers, 42; Conservative Readjusters, 40; Republicans (white), 6; Republicans (colored), 11; tie vote in Portsmouth, 1; total number of delegates, 100.

A convention of colored citizens, consisting in great part of inhabitants of Richmond and the vicinity, met in that city May 19th, and adopted the following resolution:

Resolved, That we recommend to our race throughout the State to organize themselves into emigration societies for the purpose of leaving the State; and provided, our condition is not bettered by the authorities of the State.

A Citizens' Association was organized in Richmond, July 25th, for the object of obtaining modifications in the State and municipal Sunday laws which require the closing of all places where drinks are sold between midnight on Saturday and sunrise on Monday morning.

The James River and Kanawha Canal has been repaired by the labor of the convicts in the penitentiary, who have been employed also on the Clifton Forge and other railroads. There were 52 convicts less in the penitentiary at the close of the year, and a daily average of 32 less, than in the preceding year. The cost of their keeping per man was \$62.47 for the year, or an average of 17 cents per diem. Of those who have been hired out under contract to railroad companies and other corporations, 42 have escaped. The mortality in the camps of convicts thus employed is twice as great as in the prison. The following are the statistics of the penitentiary: Maximum number of prisoners during the year, 1,070; minimum, 1,013; average, 1,041; average age of convicts now in prison, 26 years, 3 months, and 1 day; average sentence of convicts now in prison, 8 years, 2 months, and 10 days; per cent. of decrease from September 30, 1878, to September 30, 1879, 5½ per cent. Number of prisoners for first conviction, 921; for second conviction, 91; for third conviction, 3; total, September 30, 1879, 1,015.

The following statement shows that the number of schools and attendance of pupils declined in 1878 to nearly one half of what they were in the preceding years: Number of schools (counting each grade in graded schools as a separate school) in 1879, 2,491; in 1878, 4,545; in 1877, 4,672. Pupils enrolled in 1879, 108,074; in 1878, 202,244; in 1877, 204,974. Average daily attendance in 1879, 65,771; in 1878, 116,464; in 1877, 117,843. The average number of months taught in the 2,491 schools (1,816 white and 675 colored) which were opened in 1879 was 5.36. The total school population was 483,701—280,849 white, 202,842 colored. Of the white schools 95 were graded, of the colored 33; together, 128. Of the 108,074 enrolled pupils, 72,306 were white, 35,768 colored; of the 65,771 in average daily attendance, 44,540 white, 21,231 colored. The falling off in schools and attendance was owing to the fact that in some districts the debts had been allowed to accumulate until the local boards determined to open no schools, but devote the income to paying off the debts; in others the supervisors had diminished the school levies. Under the bill passed by the General Assembly called the Henkel bill, the sum of \$459,515 applicable to the support of public schools is obtained.

A writ of *habeas corpus* being applied for in

the United States Circuit Court in the case of a negro, Edward Kenney, and his wife, Mary Hall, a white woman—convicted under the law of March 14, 1878, prohibiting the intermarriage of races, and confined in the penitentiary—it was refused by Justice Hughes on the ground that the United States courts have no jurisdiction over questions of marriage, on which each State has sovereign and complete authority to make laws for its own citizens. The laws of Virginia make miscegenation a penal offense, and prohibit citizens from going outside the State for the purpose of contracting an unlawful marriage. The defendant was married to the white woman in the District of Columbia, and they returned and cohabited in Virginia.

The United States grand jury, under the instructions of Judge Rives, brought a bill of indictment against nine county court judges for violating the civil rights act in habitually refraining from placing colored citizens on the jury lists.

In answer to a petition from colored citizens requesting that colored men be selected for jurymen in cases where negroes were accused of crime, Judge Christian of the Hustings Court declared that he was enjoined by the law to select only such as he considered "well qualified to serve as jurors," and that to place colored men on juries on the ground of their race would be a violation of the fourteenth amendment.

W

WEST VIRGINIA. The composition of the Legislature of 1878-'79 according to parties was as follows: Senate—Democrats 21, Republicans 2, National 1; House—Democrats 40, Republicans 8, National 17. The Governor is H. M. Matthews, whose four years' term expires March 4, 1881. The names of the other State officers are as follows: Secretary of State, Sobieski Brady; Superintendent of Public Schools, W. K. Pendleton; Auditor, Joseph S. Miller; Treasurer, Thomas West; Attorney-General, Robert White. The election for the Legislature and all the State officers occurs October 12, 1880.

The Legislature assembled January 8th. George H. Moffett was elected President of the House, and D. D. Johnson President of the Senate. The session was marked by the passage of a large number of acts, some of them very important in their scope and bearings.

An act was passed making it a misdemeanor for a lawyer to receive moneys in trust for a client and fail to account for them within six months without good and sufficient reason. An accused lawyer may testify in his own behalf; on conviction he is to pay a fine and to be disbarred. Another act permits the Supreme Court to reopen in the regular term cases decided in the special term for the correction of clerical errors.

A law for the protection of farmers against spurious and adulterated fertilizers enables them to have samples analyzed free of charge by the Professor of Chemistry in the State University at Morgantown.

An act prohibits members of the county court, overseers of the poor, district-school officers, or any member of any other county or district boards, or any county or district officer, from being pecuniarily interested in any contract or service, in the award or letting of which he, as such member or officer, has any control.

An act imposes a penalty upon persons who

transact the business of insurance without authority.

An act of 1875, providing for the inspection of tobacco, was repealed.

An act was passed prescribing regulations for the transportation of petroleum or other oils and liquids by railroad companies or transportation companies, or through pipes of iron or other material constructed for that purpose.

A usury bill, being a reënactment of the old Virginia interest law, fixing the rate at 6 per cent. per annum, and making a lender at usurious interest forfeit the entire interest, but not the principal of the debt, after much discussion, was defeated.

A bill was passed for the regulation of coal-mines and protection of persons employed in them.

A bill provided for the use of convict-labor on works of public improvement, including railroads.

A laborer's lien act was passed, giving mechanics and laborers a lien upon property for work performed in its construction or improvement. Every workman or laborer doing work for an incorporated company is given a prior lien for the amount of his wages on all the personal and real property of the company.

A resolution was adopted instructing the members of Congress to advocate the passage of the Texas Pacific Railroad subsidy bill. Earliest efforts were subsequently made to have it reconsidered, as several members who had voted in the affirmative desired to change their votes.

The extension of the normal schools by the preceding Legislature led to a reaction in the public mind, which manifested itself in a large reduction in the appropriations for these institutions. They were considered to have proved relatively of more advantage to the localities in which they were established than to the general common-school system of the State. By an amendment in the school laws, the selection

of teachers is conferred upon the district boards of education, instead of being intrusted to the trustees of the sub-districts as formerly. The salary of the county superintendent is reduced to a mere nominal sum. The classification of teachers is altered, making three instead of five grades. Graduates of the normal schools may be required to undergo an examination. A school-book bill provides that the retail prices of school-books, not to exceed the present wholesale rates, shall be printed on the covers of the books and posted on the walls of the school-rooms, and requires the publishers to deal with the school authorities in the sale of their books.

A proposal for a constitutional amendment reforming the judiciary system was adopted. The amendment is to be submitted to the vote of the people in 1880. Its object is to transfer the functions of the county courts to the circuit courts. The number of the latter is to be increased. The jurisdiction of the county court, which will consist of three commissioners, is to be confined to police and fiscal matters. The amendment proposes also to increase the judicial functions of justices, revoking the right of a defendant in a case involving more than twenty dollars to remove it on his simple motion to the county court. The ability of justices to hear jury cases is extended. Their jurisdiction is extended to cases involving not above three hundred dollars. The amendment provides for the establishment of courts of limited jurisdiction in any incorporated town. The number of the circuits is to be increased from nine, each with one judge, to thirteen, with fourteen judges.

The committees of inquiry into the freight-rates of the Baltimore and Ohio Railroad made their reports to the Senate and House on January 15th. The reports accused the company of making unjust and unauthorized discriminations in its freight schedule in favor of through traffic and against way traffic. In view of the fact that the road had made material reductions in its charges for transportation within the State since the appointment of the committees of investigation, no action was taken on the reports by the Legislature. Johnson N. Camden was summoned before the bar of the Senate to answer charges of contempt in refusing to declare to the Committee on Railroad Freight the amount of the rebates allowed by the Baltimore and Ohio Railroad Company to the Camden Consolidated Oil Company in the transportation of oil. Projects of laws regulating the freight-rates on the Baltimore and Ohio Railroad were introduced by the committee and others, and discussed with much heat. By a joint resolution a new joint committee of five was appointed to confer with the managers of the road and ascertain what reductions of freight-charges should be carried out, and whether the company conformed to the provisions of its charter and the laws, and to report any contravention of the same to the At-

torney-General, who should institute proceedings against the railroad to compel the forfeiture of its charter, by means of a writ of *quo warranto* or otherwise.

The following account of the present condition of the State was communicated by Governor Matthews to a newspaper reporter:

The present population of the State is estimated at 500,000, a gain of about 60,000 since 1870, chiefly a natural increase, there having been very little immigration. The salt-works interest in the Kanawha Valley, which has been much depressed, is now picking up rapidly. The oil industry is not making much headway, and the business has lost its speculative character. The glass-works at Wheeling are prosperous, and new discoveries of valuable iron deposits are reported on New River, on the line between Virginia and West Virginia. The coal-fields are being worked to a much greater extent than formerly since the opening of the Chesapeake and Ohio Railroad, and West Virginia has more coal, and a much greater variety, too, in proportion to territorial extent, than any State in the Union. The State government is economically administered. The cost of feeding penitentiary convicts is only 6½ cents per day, and the entire cost of food, clothing, guards, and salaries of officials is only 25 cents per day for each convict; while the cost of maintaining each inmate of the Insane Asylum, including all expenses, is only \$2.33 per week. Governor Matthews says there is no State debt, and the people are willing to settle with Virginia by allowing West Virginia to be charged with all public improvements within her borders, and with her proportion of the current expenses of the State government since 1824, and to be credited with all taxes paid into the State Treasury by the counties of which she is composed since that date. Upon that basis, Governor Matthews says, it has been estimated that Virginia would be indebted to the new State about \$500,000. The public schools are in good condition and improving, and the rate of State taxation is 20 cents on the \$100 for State purposes, and 10 cents for the school fund. There are only 17,000 colored people in the State, not enough to form an important element of its population.

The railroad facilities are being so extended as to promise a speedy development of the natural resources of the State, which, though little exploited, are counted not inferior to those of scarcely any State in the Union. The Weston and Clarksburg Railroad has been completed. The Bellaire and Southwestern has also completed its track. The Pittsburgh Southern Railroad is being carried through the central part of the State. A company has been formed for the construction of a narrow-gauge road between Wheeling and Parkersburg, traversing one of the finest iron-ore fields on the continent.

A band of law-defying characters in Wetzel County, called the Red Men, who had terrorized the community for years by their arbitrary and violent deeds, taking vengeance upon all who refused to submit to their rule, and not shrinking from the most desperate and bloody acts, were proceeded against by the authorities. Seven of them, named John Ullom, George Ullom, Amos Hemeleck, John Steward, John Hostaller, Eloy Butcher, and John Lough, were arrested in the beginning of June. The organization originated in an act of Lynch justice perpetrated in 1870 on John Jennings, who had collected a band of desperate characters

similar to that which the Red Men subsequently became. The lynchers who shot Jennings had stained their faces with red earth; hence the name. The prisoners were arrested on the charges of riot and house-breaking. Threats were uttered against any justice of the peace who would issue warrants for the arrest of the Red Men. About fifty of the band were still at large. They were all of the class of farmers and fairly educated. The organization extended into Marion County. A similar company of conspirators had formed also in Monongalia. The ringleaders of this gang were also arrested and brought to trial on the charge of conspiring against the liberty, property, and lives of citizens. The acts of these lawless bands were all prompted by some motive of supposed justice; thus they had lynched several persons on an accusation of adultery, and had driven two men off a farm on account of an alleged faulty title; they had also frightened a justice of the peace, one of whose decisions displeased them, out of the State.

An interesting decision was rendered by the Court of Appeals on the construction of the statutes relating to the separate estate of married women. The case was William Radford and Henry Light, appellants, against Martha A. and James Carwile, appellees. The appellant Radford had purchased of one Johnson a piece of land and sold it to the appellees, the deed being made out directly to Martha A. Carwile by Johnson to save the expense of a double transfer, and the appellees executing their joint and several bond to Radford for an unpaid balance. The lower Court held that the bond was no charge upon the separate estate, created by the deed, of the appellee Martha. The Court of Appeals sustained the decision, ruling that the separate personal estate of a married woman, including rents and produce of real estate, is liable for debts incurred during coverture, but that the common-law doctrine regarding the realty of married women, which exempts it from all liabilities incurred by debts or contracts made during coverture, is still in force.

The case of the United States against James M. Mason, in chancery, involving the privilege of operating a ferry across the Shenandoah at Harper's Ferry, was decided by Judge J. J. Jackson of the United States District Court. The defendant claimed that the United States could not acquire a ferry because that species of property was not conducive to any of the objects for which the General Government was created. The Court ruled on this point as follows:

This proposition, if sound, virtually denies to the United States the power to furnish itself with means of transportation of any character whatever. They could not purchase and hold steamboats, railroads, wagons, or any other means of transportation. . . . It is a right incident to and inherent in all governments to purchase and hold what property they think is necessary for the due exercise of all powers belonging to them. No restriction is imposed upon the Govern-

ment of the United States by the Constitution as to the character or kind of property it may purchase and hold.

The decision of the Court was delivered in the following terms:

The right of the United States in the ferry franchise purchased from Fairfax became forfeited by operation of law, and therefore she had no such right that she could sell or transfer; it also appears that the State had no power to establish a ferry for the defendant across the river Shenandoah, to and from the lands of the United States, and therefore, so far as the defendant Mason or his agents, or those claiming under him, attempt to operate a ferry from the 684-acre tract of land on the east side of said river, purchased by the United States from Fairfax, to the lands of the United States on the west side of said river, at Harper's Ferry, and to which the vendee of Neer & Co. hold an equitable title by purchase from the United States, the said Mason, his agents, or those claiming under him, are perpetually enjoined and inhibited from so doing until the assent of the United States is first obtained. But the defendant Mason is not inhibited or restrained from operating a ferry over the Shenandoah River, to and from any lands he may own, which ferry right he claims title to under the laws of this State.

In the case of Thomas Strander, plaintiff in error, against the State, the plaintiff, who had been convicted of murder in the Ohio County Circuit Court in 1874, and whose conviction had been confirmed by the Court of Appeals, was brought before the United States Circuit Court. The plaintiff appealed the case to the United States Court on the ground of the unconstitutionality of the jury law of West Virginia, under which the jury was impaneled which convicted him, as no colored person is eligible as a grand or petit juror in the State, in accordance with the following provision: "All *white* male persons who are twenty-one years of age and not over sixty, and who are citizens of this State, shall be liable to serve as jurors."

WHITTINGHAM, WILLIAM ROLLINSON, Bishop of the Protestant Episcopal Diocese of Maryland, born in New York, December 2, 1805, died at Orange, New Jersey, October 17th. At the early age of twenty he graduated from the General Theological Seminary in New York. In 1827 he was ordained a priest, and four years thereafter took charge of his first important parish, St. Luke's in New York. In 1835, after a trip to Europe taken for his health, he was chosen Professor of Ecclesiastical History in the General Theological Seminary. He was during this period quite active as a writer and editor of various publications. He edited the "Family Visitor" and "Children's Magazine," monthlies, "The Churchman," a weekly Church paper, "The Parish Library," Palmer's "Treatise on the Church," a translation of the Commentary of Vincent of Lérins, and Rattram on the Lord's Supper. When a student he assisted Dr. Turner in the translation of "Jahn's Introduction." He was associated with Drs. Schroeder, Turner, and Eastburn in the authorship of "Essays and Dissertations in Biblical Literature." In 1840, after a sharp

contest among the friends of several candidates, he was elected Bishop of Maryland, and consecrated at St. Paul's Church, in Baltimore, September 17th. Through the efforts of Bishop Whittingham several educational and charitable institutions were founded in the diocese, such as St. James College, Hagerstown; the Church Home and Infirmary, Baltimore; an order of deaconesses; and the Sisterhood of St. John, in Washington. In 1869 the Diocese of Easton was divided from that of Maryland. In 1870 the Rev. Dr. William Pinkney was appointed to relieve Bishop Whittingham of a part of his labors. Dr. Whittingham was a representative of the American Church at the Lambeth Conference in Great Britain, and also in 1872 at the meeting of Old Catholics at Bonn, Germany. He engaged in several controversies with the clergy on points of church government; among which were his presentation in 1876 for not bringing to trial the rector of Mount Calvary for reading prayers for the dead, and the earlier contest with the Rev. Dr. Trapnell of St. Andrews concerning the prior right of the Bishop to celebrate communion at confirmations. He was a pronounced High Churchman, but came to modify his ritualistic views somewhat in his later life. He took an interest in the Old Catholic movement, and gave a glowing account of its objects in his report of the Bonn Conference. During the war he adhered strongly to the cause of the Union, and rebuked his clergy for omitting the prayer for the President. Bishop Whittingham was an invalid for many years before his death. His last official act was performed November 7, 1878. At the time of his consecration he was the youngest bishop in the United States, and at the time of his death he was the senior bishop but one, having been thirty-nine years in the episcopal office.

WISCONSIN. The Legislature met at Madison January 8th, and adjourned March 5th. Coming together directly after the new Revised Statutes went into effect, there was a disposition to avoid changes in the general body of the statute law. Besides the election of a United States Senator and the levying of the State tax, there was little important business to attend to. Lieutenant-Governor James M. Bingham presided over the Senate the greater part of the time. Assemblyman Kelley was the Speaker of the House. About 400 bills were introduced in the Assembly, and about 200 in the Senate; and 256 of the whole number became laws.

A law was enacted providing that tramps should be either sentenced to six months' hard labor in the county jail where arrested, or be put in close confinement on bread and water for thirty days, in the discretion of the judge; or, in case of refusal to work, to be sent to State Prison for a term not exceeding two years. The Supreme Court declared unconstitutional those portions of the assessment law which regulated the reassessment of property

after litigation. This decision was confirmation of one rendered by the lower Court. On February 4th Chief Justice Ryan delivered the decision to the Judiciary Committee of the Legislature, who immediately framed a new assessment law in conformity with the doctrine laid down by the Court, but not otherwise changing the general features of the law, which was passed without difficulty. Provision was made for regulating and to a certain degree restricting the adulteration of food, drugs, etc. A Board of Emigration was established, to consist of five persons, of whom the Governor and Secretary of State are *ex officio* members. Most of the acts are local in their character, and a large majority of these relate to the logging interests. Seymour and Ahuapee were incorporated as cities, and two new counties were erected, viz., Price and Marinette. The charters of some fifteen or twenty cities were amended. In the city charters of Fond du Lac, Oconomowoc, and Seymour, a departure from all previous legislation of doubtful constitutionality was injected, viz., the limitation of the right to hold office to freeholders. An important local measure was passed, to the effect that at municipal elections in Milwaukee, electors shall be registered as at general elections. Prominent Milwaukee lawyers regard this law as likewise unconstitutional.

The appropriations made amounted in all to \$299,177, a saving of about \$40,000 over those of 1878. The chief items were: State Hospital for the Insane, \$80,747, including \$22,100 for improvements; Northern Hospital for the Insane, \$71,457; Industrial School for Boys, \$52,000; Deaf and Dumb Institution, \$30,000; Institution for the Education of the Blind, \$18,500. The receipts into the State Treasury during the fiscal year ending September 30, 1879, from all sources, were \$1,812,682.80; the balance on hand September 30, 1878, \$403,288.29; making the total receipts \$2,215,971.09. The disbursements during the same period for all purposes were \$1,627,146.49; leaving a balance, September 30, 1879, of \$588,824.60. The receipts into the general fund during the fiscal year were \$1,249,338.02; balance from previous year, \$79,055.98; total, \$1,328,394. Of this sum there was derived from direct State tax, \$682,388.99; railroad companies, license-taxes, \$395,886.46; insurance companies, fees and license-taxes, \$45,772.76; miscellaneous sources, \$125,289.81. The disbursements from this fund were as follows:

Interest on the public debt.....	\$157,560 00
School fund.....	7,088 86
High schools.....	25,000 00
State University.....	41,810 30
Salaries and other permanent appropriations...	109,028 62
Legislative expenses.....	84,801 61
Benevolent and penal institutions.....	875,815 72
Miscellaneous purposes.....	252,012 90
Total.....	\$1,055,112 51

The disbursements from this fund, which represent the actual expenses of the State,

have been for several years past as follows: 1872, \$1,076,442.96; 1873, \$1,191,966.01; 1874, \$1,038,703.34; 1875, \$1,260,168.39; 1876, \$1,137,788.65; 1877, \$1,204,900.40; 1878, \$1,047,796.23; 1879, \$1,055,112.51.

The aggregate indebtedness of the State remained as at the close of the last fiscal year, and consists of

War bonds outstanding.....	\$11,000
Certificates of indebtedness to trust funds.....	2,241,000
Currency certificates.....	57
Total.....	\$2,252,057

The indebtedness of the counties, cities, towns, villages, and school districts in the State amounts to \$10,115,898, according to the returns made to the Secretary of State. More than usual efforts were made to secure accuracy in these returns. The total public indebtedness of the people of Wisconsin is therefore \$12,367,955, or at the rate of about \$8.50 per capita of estimated population, and 3¼ per cent. of the assessed valuation.

The value of all property in the State subject to taxation, as returned by the assessors for the past two years, is as follows:

PROPERTY.	1878.	1879.
Personal property.....	\$96,077,208 00	\$83,127,940 00
City and village lots.....	108,399,469 75	58,545,746 50
Other real estate.....	255,563,904 57	292,620,498 50
Totals.....	\$455,340,582 32	\$406,908,185 00

This shows an apparent decrease in valuation of \$49,037,397.32, but is an indication of the zeal with which communities seek to avoid the payment of their just proportion of the public expenditures.

The total taxes levied in the State for the year 1878 amounted to \$7,969,859, which is \$61,769 less than for the previous year, and was at the rate of \$1.93 on each \$100 of the State assessment for that year. The purposes for which these taxes were levied, and the respective amounts and rates, are as follows:

KIND OF TAX.	Amount.	Rate, mills.
State tax.....	\$631,889	1-65
County tax.....	1,770,451	4-30
Town tax.....	2,428,997	5-57
School tax.....	1,998,742	4-54
Road tax.....	1,090,050	2-64

These figures represent only the direct taxes levied upon property. Quite large amounts were collected by the State, and cities, villages, and towns, in addition, by way of licenses and otherwise. The total State tax, direct and indirect, is represented by the payments into the general fund, and these amounted to \$1,120,837.81 in the fiscal year ending September 30, 1878 and to \$1,249,338.02 in the fiscal year ending September 30, 1879. The State tax for 1879 was \$455,871.89, which is \$226,517.10 less than was apportioned for collection in 1878, and more than 23 per cent. less than the least tax in many preceding years.

The Secretary of State estimated that the

expenditures for the calendar year 1880 would be \$968,305.54, and the receipts under existing laws as follows: Taxes, \$207,855.54; railway companies, \$395,000; insurance companies, \$45,000; miscellaneous sources, \$29,600; total, \$677,455.54. According to this estimate, a tax levy of \$290,850 would be ample for all purposes.

The total amount of money expended for the support of the common schools during the year was \$2,152,788.15, 74 per cent. of which was for teachers' wages. The number of pupils in attendance was 293,286; of teachers, 9,875; of schoolhouses, 5,626. The estimated value of the schoolhouses is \$4,319,445.81; of sites, \$738,520.95; of apparatus, \$157,012.30; making an aggregate investment for common-school purposes of \$5,214,979.06. The total number of children over four and under twenty years of age is reported at 484,353. The expenditures for the four normal schools were \$72,708.07, of which \$57,498.40 were paid to instructors. The attendance during the year aggregated 1,803 pupils. The catalogue of the State University shows 481 different students in attendance during the year. The Board of Regents report \$70,558.18 paid out during the year for current expenses, of which \$40,206.77 were received by instructors.

The whole number of boys in attendance at the Industrial School for Boys, in Waukesha, during the fiscal year, was 435, and the average attendance 425. The number admitted was 125, as against 151 in the last year, and the number discharged 113. The current expenses were \$42,866.72, or at the rate of \$100.86 per inmate, as against \$114.52 in 1878. The amount paid for salaries and wages was \$13,810.36, and for subsistence \$11,097.41. The sum of \$13,800 has been paid toward the erection of new buildings. An epidemic of typho-malarial fever broke out in the institution in the summer, which elicited much discussion; the total number of cases was 30, of which 6 terminated fatally.

The number of convicts confined in the State Prison, September 30, 1879, was 309, 37 less than at the same date in 1878. The average number in confinement was 328, 9 less than the average for the preceding year. There were only 130 commitments during the year, as against 213 for the year ending September 30, 1878. It does not follow, however, that there has been a decrease in crime, as, under the change in the law relating to larceny, many are now sentenced to county jails who were formerly sent to State Prison. Of the 130 convicts committed during the year, only 20 had theretofore been in prison, and 17 were without the rudiments of an education. The total cost to feed, warm, clothe, guard, instruct, and discharge the prisoners was \$40,270.08, or \$2.36 each per week. The principal items of disbursements were: for salaries and wages, \$15,535.75, and for subsistence, \$14,367.02. The total receipts from all sources were \$46,-

619.23; disbursements, \$47,183.24; cash balance at the close of the year, \$11,090.44. The expenses for the next fiscal year are estimated at \$42,825, of which the prisoners' earnings are not expected to pay more than three fourths.

The whole number of children cared for in the Soldiers' Orphans' Home since March 31, 1866, when it was adopted by the State, has been 683, and the total cost to the State has been \$342,300.

At the Northern Hospital for the Insane, 757 patients have received treatment, of whom 65 were discharged recovered and 68 improved. The daily average of patients was 553. The total expenditures were \$132,452.62, of which \$21,985.56 were for additions, repairs, and improvements, leaving as current expenses the sum of \$110,467.06, or at the rate of \$200 for each patient. The current expenses for the next hospital year are estimated at \$122,991.96.

The Wisconsin State Hospital for the Insane has given treatment to 607 patients during the year, and reports 37 discharged cured and 35 discharged improved. The average number under treatment was 425, and the total expenditures were \$135,555.82, of which \$30,951.83 were for additions, repairs, and improvements, by which the capacity of the hospital has been increased to accommodate 180 additional patients. The current expenses were \$104,603.99, an average of \$246.12 for each patient. The current expenses for the next hospital year are estimated at \$121,550.

At the Institution for the Education of the Blind, 90 pupils were in attendance, the average expense per scholar being \$207.26.

At the Institution for the Education of the Deaf and Dumb, 187 names were upon the register at the close of the fiscal year. The total disbursements were \$30,318. The articulate system of teaching was introduced with very satisfactory results. The main building of the institution was totally consumed by fire on September 16th.

There were completed 89.90 miles of new railroad in Wisconsin during the year, making the aggregate number of miles in operation 2,923, inclusive of 107 miles of narrow-gauge track. The total number of miles of road operated by the companies reporting to the Commissioner is 4,765. The cost of these roads and their equipments, as represented by capital stock and outstanding bonds, is \$205,185,806.88, and the net earnings are reported at \$12,691,006.90, being an average of 6.2 per cent. on the assumed cost. The total number of passengers carried on all the lines was 5,336,688, and the freight carried amounted to 7,997,399 tons. The number of personal casualties in Wisconsin was 133, as against 196 the previous year. On the entire lines of these roads, in all the States, there were 284 casualties. Two passengers were killed, neither of them in this State, and eight injured.

The condition of the trust funds and of the public lands, as revealed in a review of all the

books by the Commissioners of Public Lands, is as follows: The number of acres of land held by the State September 30, 1878, was reported at 1,538,825.07. The increase by forfeiture during the year was 24,051.88; the increase by error in former reports, 27,550.50; the increase from school-land indemnity, 37,089.09; making the total number of acres 1,627,516.54. The decrease by sales during the year was 52,827.21; leaving 1,574,689.33 acres held by the State, September 30, 1879. The productive trust fund was \$4,166,866, an increase over the amount in 1878 of \$67,204. The income of the trust funds was \$353,241, which is \$26,561 more than that of the preceding year.

The National party held their Convention at Watertown on July 15th. Reuben May of Vernon County was made temporary and permanent President. The following candidates for State officers were nominated: For Governor, Reuben May; for Lieutenant-Governor, W. L. Utley; for Secretary of State, George W. Lee; for Treasurer, Peter A. Griffiths; for Attorney-General, George B. Goodwin; for Superintendent of Public Instruction, W. H. Searles. The following resolutions were adopted:

Whereas, A money despotism has grown up which controls the law-making power of our country, dictates judicial decisions, wields an undue influence over the Executive of the nation, in consideration of laws passed for the benefit of the people, thus enabling the money power to carry on its schemes of public plunder, under and from which colossal fortunes have been gathered in the hands of the ambitious and unscrupulous men whose interests are at war with the interests of the people, hostile to popular government, and deaf to the demands of honest toil; therefore, we, the representatives of the Union Greenback-Labor party of Wisconsin, adopt the following as our platform of principles:

Resolved, That we demand the immediate calling in and payment of all United States bonds in full legal-tender money of the United States, gold and silver coin now in the Treasury for redemption purposes, and beyond such metal money in greenback full legal-tender money, to be created, issued, and protected as full legal-tender money of the United States; and that the United States Government never issue another bond of any kind or class.

Resolved, That we demand the abolition of the national banking system, and the prohibition of all banks of issue, either State or national.

Resolved, That the issue of greenback money be limited in value to the sum required to meet the just obligations of the Government, less the sum of coin money in the Treasury for resumption purposes.

Resolved, That we demand unlimited coinage of gold and silver as legal-tender money of the United States.

Resolved, That the rate of interest on money should not exceed the rate of profit derived from the productive industries of the country, and should be fixed by national law.

Resolved, That we denounce and condemn the efforts of both the old parties to create a solid North or a solid South, thereby sectionalizing the country, arraying one section against the other; that we know no North, no South, no East, no West; that we demand the government of our country be so administered as to secure equal rights to all our people, be they high or low, rich or poor, black or white.

Resolved, That convict-labor in our penal institutions be so arranged by law as not to interfere with free

labor, and that prison-labor be utilized by the State, with no intermeddling of contractors.

Resolved, That we inflexibly oppose all fusion or coalition with either of the old parties, and invite honest men of all parties to unite with us in the interests of the wealth-producing, tax-paying classes of the United States.

There were thirty counties represented in the Convention by 130 members.

The Republican State Convention assembled at Madison on July 23d. J. B. Cassidy of Rock County was chosen permanent President. The following State officers were nominated: For Governor, William E. Smith; for Lieutenant-Governor, James M. Bingham; for Secretary of State, Hans B. Warner; for Treasurer, Richard Guenther; for Attorney-General, Alexander Wilson; for Superintendent of Public Instruction, William O. Whitford. The following platform was adopted:

The Republicans of Wisconsin, by their representatives assembled in State Convention, declare their adhesion to the following propositions:

1. The Republic of the United States is a nation, not a confederacy of sovereign States, and its Government is clothed with permanent authority for the regulation of all subjects of national concern.

2. The elections of members of Congress are national elections, and as such the whole country is interested in having them fairly and peacefully conducted, so that every voter may be afforded an opportunity to exercise his right of suffrage freely and without fear of personal violence, to vote once, and only once, at a given election, and to have his vote honestly counted and returned. It is the duty of the national Government to enforce this right. The Republican party is opposed to any military interference with the elections, except when it is necessary to maintain the public peace and protect the constitutional rights of citizens. In no instance under a Republican administration have the United States troops interfered with the exercise of free suffrage on the part of the people. The Democratic party, by the votes of its Representatives in Congress against the proposition to prohibit the presence in the vicinity of the polls, not only of United States troops, but of all men armed with deadly weapons, have clearly shown the bad faith and hypocrisy of its affected horror of bayonets at the polls. It would permit an armed mob of its own partisans to surround the ballot-box, but would prohibit the employment of United States soldiers to protect peaceful citizens from intimidation and violence at the hands of the mob.

3. The refusal of a mere majority in Congress to make appropriations of money already collected by the tax from the people for the ordinary and legitimate expenses of the Government, for the purpose of compelling the President by such refusal to approve a measure which he regards as unwise and wrong, was revolutionary in principle, subversive of the Constitution, and deserving the condemnation of all good citizens.

4. The practice of attaching what are popularly termed political riders to appropriation bills is wicked legislation, and should be prohibited.

5. The thanks and grateful recognition of the people are due to President Hayes, and to the Republican members of Congress, for their firm and successful resistance to the attempts made by the Democratic party to disarm the national Government on election days, and to repeal all the laws for protecting the security of the ballot-box, and providing for the detection and punishment of fraudulent voting.

6. The successful resumption of specie payments has vindicated the wisdom of the Republican policy on that subject, and afforded a signal illustration of the lack of honesty of the statesmanship which led

the Democratic party to oppose resumption, and to declare that it was impossible. It has already borne precious fruits in enabling the Government to fund its debt at four per cent. interest, or an economy of many millions per annum, and in promoting a feeling of confidence and security that is already giving a powerful impetus to business and industry and enterprise. The interests of all classes of people are best promoted by a currency possessing or representing intrinsic value, such as we have at present, and bearing a fixed relation to the world's money and that of commerce. All attempts to modify existing laws in a way to introduce a depreciation or fluctuation in the value of the money of the country should meet with a firm and determined resistance.

7. That it is the duty of Congress to enact laws to carry out the provisions of the Constitution with its amendments, and to secure to the people of the States the rights guaranteed by it; and that laws, when enacted, are supreme and must be obeyed and enforced, and the recent attempts of the Democratic Congress to repeal and strike from the statute-books such laws, some of which were placed there by our fathers and have been enforced nearly a century, has no parallel in the history of the country.

8. That our Governor and State officers are entitled to the thanks and approval of the people for their wise and faithful administration of the public trusts committed to them.

The Democratic State Convention met at Madison on September 9th. James R. Doolittle of Racine was chosen President. Alexander Mitchell was nominated for Governor, with the understanding that if he declined the nomination the nominee for Lieutenant-Governor, William J. Vilas, should be substituted in his stead. The latter declined the nomination, and was replaced upon the ticket by George H. King. The remainder of the ticket was made up as follows: For Secretary of State, Samuel Regan; for Treasurer, Andrew Hahen; for Attorney-General, J. Montgomery Smith; for Superintendent of Public Instruction, Edward Searing. The platform adopted, besides other resolutions denouncing the rule of the Republicans in the South, condemning the inauguration of President Hayes, and deprecating the dangers of centralization, contained the following:

That the Democratic party adheres to the financial doctrine which it established when in power, that the constitutional currency of the country, and the basis of all other, should be gold and silver coin; and so we maintain that all national Treasury notes and authorized currency should be convertible into the same on demand.

That the Democracy does not forget that to the promptness, valor, endurance, and noble devotion of the patriotic volunteers of the army and navy in the late war this country is indebted, under Providence, for the salvation of its form of government and the constitutional liberty and prosperity now enjoyed by all its citizens, and again thankfully acknowledges the debt of national and individual gratitude which is due to the living and dead heroes of the nation, an obligation which increases with years, and which entitles the survivors to receive all the marks of appreciation and honor which a grateful people can properly bestow.

That the administration of State affairs ought to be conducted with greater economy, and greater efforts be made to diminish the burden of taxes; that all official salaries and fees and all expenditures for State charitable, educational, and penal institutions, raised to meet the necessities of high-priced times, must now be correspondingly reduced, and all useless boards

and commissions abolished, and that the candidates of this Convention pledge their best endeavors to pursue a course of retrenchment in public expenditures.

We should protect our naturalized citizens as we do our native-born in every part of the civilized world, and we should resist all improper claims upon them by governments to which they no longer owe allegiance.

That as the Democratic party, being founded on those principles which best support the liberty and welfare of the citizen, has hitherto survived all former adversaries, so, by faithful adherence to its time-honored doctrines and the selection of honest and competent men for public offices, it looks forward with abiding confidence to its final and complete triumph over all who now oppose these principles.

The result of the November election was the continuance in office of the Governor, William E. Smith, and the Lieutenant-Governor, James M. Bingham, and the reelection of the other State officers: Hans B. Warner, Secretary of State; Richard Guenther, Treasurer; Alexan-

der Wilson, Attorney-General; W. C. Whitford, Superintendent of Public Instruction; J. Turner, Railroad Commissioner; P. L. Spooner, Jr., Insurance Commissioner. Owing to the fact that the *ex-officio* State canvassers, the Secretary of State, Treasurer, and Attorney-General, were candidates for office, the Chief Justice, E. G. Ryan, appointed in their stead Judges David W. Small, Alva Stewart, and H. S. Conger. The votes cast for the different gubernatorial candidates were as follows: Smith, Republican, 100,535; Jenkins, Democrat, 75,080; May, Greenback, 12,996; Bloomfield, Temperance, 387; electing Governor Smith by a plurality of 25,505 votes. The composition of the Legislature of 1879 was as follows: Senate—Republicans 25, Democrats 8; Assembly—Republicans 70, Democrats 27, Greenbackers 2, Independent 1. The next election takes place November 2, 1880.

Z

ZOOLOOS, a branch of the Caffres, residing in southeastern Africa. According to A. H. Keane, in his treatise appended to Keith Johnston's "Africa," the Caffres form a branch of the great "Bantu" family. To this family also belong the Matabele and other Betchuana populations of the interior, near the Zambesi, and in the regions visited by Dr. Livingstone in his earlier travels, and even the Suaheli and Wanyamwesi of the coast opposite Zanzibar and the Tanganyika region, and the nations inhabiting the shores of the Mozambique Channel. They are not negroes in the proper sense of the word, but East Africans. Their color is not black, but a dark brown; their eyes are black and brilliant; the hair is not so woolly as that of the negroes, and their features are of an Eastern type. The Caffres in southeastern Africa are divided into three distinct groups: the Amaxoso, located in British Caffraria or the Trans-Kei Territory, and including the Galekas and Gaikas, the Tembus, and the Pondos of St. John's River; the Basutos, who inhabit the country beyond the Drakenberg range; and the Zooloos, who are almost equal in number to all others put together. The Zooloos, numbering about 600,000, are almost equally divided between those living under British rule in the province of Natal and those forming the independent native kingdom to the north of Natal known as Zoolooland, of which Cetywayo or Ketchwayo was the ruler.

Zoolooland is bounded on the north by the country of the Amatongas, on the east by the Indian Ocean, on the southwest by Natal, and on the west by the Transvaal. Its area is about 15,000 square miles, and its population 300,000. The seacoast is low and flat, differing in this respect essentially from the shores of British Caffraria about the St. John's River, which abound with beautiful wooded hills and grassy

downs. The coast-line is indented by a series of lagoons and marshes, which tend to make the neighborhood decidedly unhealthy. About fifteen miles from the sea the land begins to rise in terraces, which are covered with rich grass, and are followed by two or three mountain-ranges successively, one above another. The principal river of Zoolooland is the Umvolosi, which empties into the Indian Ocean at St. Lucia Bay. It is formed by the confluence of two mountain-streams, the Black and White Umvolosi, near the center of Zoolooland. The border with Natal is formed by the Tugela River, and farther up by the Buffalo River, while in the north the most important is the Pongolo River. Between the Umvolosi and the Tugela are a number of smaller streams. The banks of the rivers are for the most part thickly wooded, or at least covered with thick bush, while the lower plains, where they are not swampy, are covered with scrub. The country is not subject to drought in any season. The rivers, which in summer are greatly swollen by the heavy rains in the highlands, dwindle away in the winter, from March to September, becoming insignificant streams, with here and there a deeper pool. There is no malaria in the hilly districts on the side toward Natal; but the lower parts are dangerous alike to man and beast, and the jungle is then infested by the tsetse fly, whose bite is fatal to horses and oxen.

The word Zooloo in the native language means heaven. The history of the Zooloo kingdom begins with Chaka, who was born in 1787. As his mother had fled with him from his father's kraal to the Umtetwas, a neighboring coast tribe, he was educated by the chieftain's orders, and here he learned all the Caffre accomplishments as a prince and a warrior. It was here that he met some English

sailors who had been cast ashore in St. Lucia Bay, who told him of the deeds of Napoleon, then at the height of his power in Europe. Young Chaka listened attentively, and resolved to become the African Napoleon. Upon the death of his father he became ruling chief after turning out one of his half-brothers. A large portion of the Umtetwas, desiring a more warlike policy than that of their own ruler, joined the Zooloos. Chaka now entered upon an unchecked career of conquest. The whole male population of the Zooloo nation was subject to compulsory military service. He created an imperial guard of twelve or fifteen thousand prime warriors, who were kept ready at an hour's notice to march fifty miles in any direction without a halt, and to destroy a town, a chief, or a tribe in two or three days. He built numerous fortified kraals to be occupied as permanent camps by as many regiments of his army. The troops were drilled in a system of manœuvres not before practiced by African soldiers. By these means he succeeded in establishing the most formidable military power that has been wielded in modern times by any native African monarch. With this power he conquered all the surrounding countries, extending his sway from the Limpopo in the north to the St. John's River in the south. There were few or no Europeans in those parts. As for the natives, they were either entirely destroyed—the work of extermination being carried on so successfully that when the Dutch Boers came to Natal, in 1837, they found that country quite empty—or he obliged the conquered nations to take the name Zooloo, and to form part of the new compact and rigidly governed nation over which he ruled. The people of various tribes were divided up, and distributed here and there, in order to efface their original connections. Fifty or sixty tribes were thus dealt with in the course of Chaka's reign, and of these about forty have been resuscitated to a certain degree by collecting their survivors under British protection in Natal. His reign, as may be readily conceived, was marked by the most unheard-of cruelties, whole regiments with their wives and children being massacred in punishment for having suffered defeat. It was one of these outbursts of cruelty that cost Chaka his life. A regiment which he had sent out against one

of his neighbors having been unsuccessful, he determined to punish them by murdering some two thousand wives they had left at home. Among these were the wives of two of his brothers, Dingaan and Umhlangane, and they in revenge hired one of his attendants to murder Chaka. This deed was performed on September 23, 1828, and Dingaan, having murdered his other brother a few days after, ascended the throne. His reign from 1828 to 1840 was different from that of Chaka, inasmuch as he did not pretend to be a great warrior. But his government at home was cruelly tyrannical, and large numbers of his miserable subjects fled the kingdom to escape its merciless law, thousands going to Natal, where the British coast settlement at Durban had been founded in 1835. In 1838 the Boers came to the country, and a terrible massacre of them took place. For a time Dingaan was even successful against the Dutch and British in Natal and on the Orange and Vaal Rivers; but in February, 1840, he was disastrously defeated and killed. This defeat was mostly due to the defection of his brother Panda, who now ascended the throne and ruled until 1872. The rule of Panda was, according to Sir Theophilus Shepstone, "incomparably milder and more merciful" than that of Dingaan, which was principally due to the influence of the Dutch Boers. During his entire reign he regarded them with "feelings of grateful attachment and loyalty." His kingdom was tolerably quiet, as the systematic despotism established by his predecessors had effectually suppressed all internal disaffection, while the new European colonists on his borders were contented to let him alone. The history of Panda's relations with his neighbors is the same as that of the Boers and of the different British provinces of South Africa. Upon his death in 1872 he was succeeded by his son Cetywayo, who was installed by Sir Theophilus Shepstone, the Secretary for Native Affairs of Natal. King Cetywayo, upon whose accession great hopes had been built, early showed that he was animated by the same sanguinary and despotic spirit as his predecessors Chaka and Dingaan, and he soon came into conflict with his neighbors, which eventually resulted in war. (For an account of these difficulties and the war, see CAPE COLONY.)

INDEX OF CONTENTS.

A

- ABD-EL-KADER.**—An Arab chief and Mohammedan leader—birth and history, 1; his wars with the French, 1; defeated in Morocco, 1; his retirement at Damascus, 2.
- Abyssinia.**—Territorial extent, 2; King John, 2; boundary dispute with Egypt, 2; rebellion of Menelek and Woid-Mikall, 2.
- Adulteration.**—Laws to suppress food-adulteration, 2; extent of adulterations in groceries, 2; in drugs, 3; facing teas, 3; fraudulent coffee, 3; glucose in sirup, 3; alum in bread, 3; oleomargarine, 3; poisonous confectionery, 4; arsenic in colors and dyes, 4; perils from wall-paper, 4; lead-poisoning from vessels of sheet-tin containing lead, 4.
- Adventists, Seventh-Day.**—Statistics of the denomination, 5; General Conference, 5; Educational Society, 6.
- Afghanistan.**—History of British exploration in Afghan territory, 6; boundaries, 6; provinces, 6; the cities, 6; character of the people, habits, and education, 7; British war in Afghanistan, 7; capture of Jelalabad, 7; Yakooob Khan placed in control, 7; dealings with Russia, 7; British take Candahar, 7; description of Candahar, 7; advance of General Roberts, 8; occupation and abandonment of Khost, 8; escape to Russia and death of Shere Aii, 9; guerrilla warfare, 9; the treaty with Yakooob Khan, 10; Cavagnari's mission to Cabool, 10; massacre of the British envoys, 10; assurances of Yakooob Khan, 11; advance of the British on Cabool, 11; meeting between Yakooob and General Baker, 12; British army attacked before Cabool, 12; proclamation of General Roberts on entering the city, 13; scene of the massacre, 13; military trial and execution of conspirators, 14.
- Africa.**—Increase of Mohammedanism, 14; decay of Catholic missions, 14; statistics of Protestant missions, 14; table showing Christian population, 15; abdication of the Khedive, 15; Zooloo war, 15; Algerian affairs, 15; seizure of Matagong by the French, 16.
- Agriculture.**—(See UNITED STATES, the several States, and COMMERCE.)
- Alabama.**—Vote for State officers, 16; for Congressmen, 16; acts of the Legislature, 16-19; bill to prohibit the sale of seed-cotton, 16; defense of its constitutionality, 17; decided unconstitutional by the Court, 17; discussion of finances and taxation, 17; report on abuse of authority by Federal officials, 18; discussion on repealing the law requiring ballots to be numbered, 18; provisions for the public-school revenues, 19; the schools, 19; the University, 19; the charter of Mobile extinguished, 20; provisional government for the city, 20; the legal question of repealing municipal charters, 20; commercial decline of Mobile, 21; its debts, 21; delinquent taxes, 22; State finances, 22; State institutions, 23; judicial opinions on the ironclad oath, 24; extortions of revenue officers, 24; decision under a local freight law, 24.
- Alaska.**—Relations of inhabitants to the United States Government, 25; organization of a civil government in Sitka, 25; disposition of the Indians, 26; resources and prospects of the country, 26.
- Alcoholic stimulants,** cost and consumption of, in the United States, 24.
- ALEKO PASHA.**—Governor of Eastern Roumelia, 26; his life and character, 26.
- ALEXANDER I.**—Prince of Bulgaria, 26; his lineage, 26; life and military services in the Turkish war, 26.
- Algeria.**—Area and population, 26; ex-Governor Chanzy on the administration of the colony, 27; Governor Grévy announces his policy, 27; disturbances in Aures, 27; the projected Sahara railway, 27.
- ALLEN, WILLIAM.**—Governor of Ohio, 27; his life and political career, 27, 28.
- America.**—Protection in Canada, 28; United States affairs, 28; South American difficulties, 29.
- AMES, Bishop EDWARD R.**—His life and clerical services, 29.
- Anglican Churches.**—List of bishoprics, 30; Church statistics of the British Empire, 30; proceedings of the Convocation of Canterbury, 30, 31; do. of the Convocation of York, 31; question of the revision of the Prayer-Book, 31; overtures to the Old Catholics, 32; the Mackonochie case, 32; another ritualistic case, 32; the construction of the Church discipline act, 33; missionary society meetings, 33; episcopal changes, 34; church societies, 34; the Church Congress, 35; the Irish Synod, 36.
- Animal-Plants and Plant-Animals.**—Experiments with insectivorous plants, 36; peptones found in plants, 36; chlorophyll and its action in certain lower animals, 37.
- Animals, Live.**—American exports of living animals, 168.
- Argentine Republic.**—The members of the administration, 37; financial statements, 38; commercial statistics, 38; the Patagonian question, 38.
- Arkansas.**—Vote for Governor, 33; investigation of attempted bribery in the election of a United States Senator, 39; cruelty to animals act, 39; a law concerning mortgages, 40; resolution on the investigation of the Teller Committee, 40; financial condition of the State, 41; the "Loughborough bonds," 41; resolution on repudiating the railroad and levee bonds, 42; white settlement of Indian Territory demanded, 42; table of the different tribes and reservations, 43; the condition of the Territory, 43; proclamation of President Hayes regarding the agitation looking to the appropriation of the Indian lands for white occupation, 43; railroads, 44; homestead rights of settlers extended, 44; public schools, 45; militia, 45; Hot Springs reservation, 45; colored convention, 45; election returns for 1878, 46.
- Army of the United States.**—Its numerical strength, 46; the

- Ute tribes, 46; the Ute outbreak in Colorado, 46; the Indian administration, 47; question of its transfer to the War Department, 48; statistics of the reservations, 48; expenditures of the War Department, 48; mortality in the army, 48; surveys of the Territories, 48; ordnance trials, 49; the Fitz-John Porter case, 49.
- Arcental poisoning* from wall-paper, 4.
- Asia*.—Afghan difficulties, 50; Burma's threatening attitude, 50; Russian movements in Turkistan, 50; Russia restores Kulja to China, 50; Japan obtains the Loochoo Islands, 50; England and Asiatic Turkey, 50; religious movements, 51; table of the Christian population, 51.
- Astronomical Phenomena and Progress*.—Sun-spots, 51; discoveries of minor planets, 51; comets, 51; Jupiter's spots, 51; density of Saturn, 52; meteoric showers, the August and the November meteors, 52; origin of the latter, 52; fire-ball seen in England, 53; meteorites seen in Minnesota and Indiana, 53; Professor Hall awarded the British medal, 53.
- Atacama, the Desert of*, 82.
- ATKINS, J. D. C.—Representative from Tennessee, 193, 251; on the judicial appropriation bill, 244-246; on the bill in extra session, 274; presents an amended appropriation bill, 291.
- Audiphone*, an instrument for making the deaf hear, 54.
- Australasia and Polynesia*.—Increase of population in British colonies, table, 54; religious statistics, 55; public affairs of New South Wales, 55; International Exhibition at Sydney, 55; Victorian affairs, 56, 57; question of imperial control, 56; Parliamentary proceedings, 56; islands attached to Queensland, 57; New Zealand Parliament, 57; difficulty with the Maoris, 57; censuses of New Zealand, 58; the Chinese question, 58; revolt in New Caledonia, 58; missionary labors, 58, 59.
- Austro-Hungarian Monarchy*.—The imperial family, 59; members of the Government, 59; biographical sketches of the ministers, 59; area and population, 60; vital statistics, 61; the universities, 61; finances, 61; the debt, 61; commerce, 62; shipping, 62; railroads, 62; army and navy, 62; the occupied Turkish provinces, Bosnia and Herzegovina, 62; the Reichsrath, 62, 63; debate on the Treaty of Berlin, 62, 63; question of the unity of the empire, 63; Cabinet changes, 63; the elections and the formation of the new Cabinet, 64; opening of the new Reichsrath, 64; the speech from the throne, 64; the Lower House, 65; meeting of the delegations, 65; Andrassy resigns, and Baron Haymerle appointed Prime Minister, 65; administration of the occupied provinces, 66; convention with Turkey, 66; military occupation of Novi-Bazar, 66; commercial treaty with France, 66; conferences between Andrassy and Bismarck and the two Emperors, 67; a Protestant church in Innsbruck, 67.
- B.**
- Baptists*.—Statistics of the denomination, 67, 68; missionary societies, 68; Southern Baptist Convention, 69; German Baptists, 69; Scandinavian Baptists, 70. Free-Will Baptists: statistics, 70; allied associations, 70; church societies, 70. Seventh-Day Baptists: statistics, 71; Conference, 71. Brethren or Tunkers: rite of feet-washing, etc., 71. Canadian Baptists, 72. British Baptists: statistics, 72, meetings and societies, 72; the Scotch Union, 73; General Baptists, 73. German Baptists, 73.
- BARRY, General W. FARQUHAR.—Life and military services, 73, 74.
- BATTLE, Judge WILLIAM HERN.—Life and services, 74.
- BAYARD, THOMAS F.—Senator from Delaware, 193, 249; on resolutions to investigate the freedom of recent elections, 201, 204, 205.
- BECK, JAMES B.—Senator from Kentucky, 193, 249; on the judicial appropriation bill, 243; on the amended appropriation bill, 292.
- Beet, New Product from the Sugar*.—Utilization of the refuse for cattle-food, rum, potash, 75; new mode of obtaining chloride of methyl, 75; its remarkable refrigerating properties, 75.
- Belgium*.—The royal family, 76; population, 76; religious and vital statistics, 76; Treasury statement, 76; commercial movement, 77; the question of primary education in the Chambers, 77; the Church and the new school law, 77.
- BITTER, K. H.—Prussian Minister of Finance, biographical notice, 740.
- BLAINE, JAMES G.—American statesman, 78; life and career, 78, 79; speech on his resolution for an inquiry into the practice of intimidation at elections, 193-196; debate on the same, 201, 202, 203, 204; on the army appropriation bill in extra session, 260-262; on the bill to prevent military interference at elections, 270; letter on the decline of American shipping and proposal of measures to encourage ship-building, 337, 338.

CAREY, HENRY CHARLES.—An American political economist, 129; his life and writings, 129.

CASSAGNAC, PAUL DE.—His violent language in the French Chamber, 891.

Cassequeres.—A race of white negroes, 406.

CAZOT, T. J. J.—French Cabinet Minister, biographical notice, 356.

Cereals.—Production and exports of different countries, 165-167.

CHALMERS, J. R.—Representative from Mississippi, 193, 250; on the army appropriation bill in extra session, 253, 254; on the judicial appropriation bill in extra session, 277, 278.

CHANDLER, ZACHARIAH.—United States Senator, 129; his life, political career, and death, 129; speech against the bill to prevent the presence of the army at elections, 270, 271; historical parallel with the repeal of the Missouri Compromise, 271; on the judicial appropriation bill, 287, 288; a much-cited letter, 288; reminiscences of secession times, 288; the South demands to rule or ruin, 288.

Chemistry.—Draper's discovery of oxygen in the sun, 130, 131; explosive gelatine, 131; its superiority to nitroglycerine, 132; its improvement by Abel, 132; aniline salts, 132; the constitution of the elements, 133; former doubts of their elementary character, 133; Lockyer's spectroscopic evidence of their compound nature, 133; the hotter a star the simpler its spectrum, 133; solar substances identified with hydrogen, 134; composition for preventing iron from rusting, 134; spectrum of the sun's corona, 134; nitric acid produced by the electric light, 135; water-analysis and sanitation, 135; nature of indigo dye, 135; solubility of solids in gases, 136; detection of organic matter in drinking-water, 136; discoveries of new metals, 137; a new alkaloid, 137.

CHEVALIER, MICHEL.—A French political economist, 137; his life, works, and doctrines, 137.

Chili.—The Patagonian question, 139; population statistics, 139; the system of administration, 139; army and navy, 139; revenue and expenditure, 139; inflation of the currency, 140; government issue of paper money, 141; commerce and shipping, 141; railroads and telegraphs, 141; the system of public education, 142.

China.—Area and population, 142; commerce, 142; the opium-trade, 142; Chinese supremacy in Nepal and Burmah, 143; steam cotton-milling introduced, 143; diamond-mining in Shantung, 143; the rebellion of Li-Yung-tsai, 143, 144; revolt on the island of Hainan, 144; reasons for the Russian occupation of Kulja, 144; Hakim Khan attempts to seize Kashgaria, 145; barbarous treatment by the government of the sons of Yakohog Beg, 145; Kuo-Tung-tao, the late ambassador to Great Britain, 146; General Grant in China, 146; improvements in the diplomatic service, 146; the conquered rebels of Yunnan offered ailments to change their religion, 146; Protestant missions in China, 147.

Chinese Emigration.—Anti-Chinese movement in Australasia, 58; Chinese disfranchised by the Californian Constitution, 104; corporations forbidden to employ Chinese labor, 107; vetoed bill to restrict emigrants to fifteen on a ship, 213-224.

Chloride of Methyl.—A remarkable refrigerating agent, obtained from the sugar-beet, 75.

COCHERY, LOUIS ADOLPHE.—French Cabinet Minister, biographical notice, 386, 387.

COFFROTH, A. H.—Representative from Pennsylvania, 251; on the judicial appropriation bill in extra session, 274, 275.

COLLINS, Judge THOMAS WHARTON.—Biographical sketch, 147.

Colombia.—Members of the Government, 147; revenue and expenditures, 148; proposed customs reform, 148; the debt, 148; commerce, 148, 149; coffee culture, 149; a new railway, 149; mineral prospects, 149; riot in Bucaramanga, 149; difficulties of national Government without a Federal capital, 150; the Liberals elect the next President, 150.

Colorado.—Results of the State election, 150; election of United States Senator, 150; Congress petitioned to remove the Utes from their reservation, 150; its value and extent, 150; the code *versus* common-law practice, 151; civil-damage temperance act, 151; public irrigation system, 151; the grant of the Government lands demanded for the development of the irrigation-works, 152; educational suffrage qualification discussed, 152; the School of Mines sustained, 153; woman suffrage, 153; cattle law, 153; fish-preservation act, 153; law of placer claims, 154; the State debt, 154; assessment law, 154; public schools, 155; public lands, 155; agricultural progress, 155; mining development, 155; election of a Judge and the party platforms, 155, 156; tax valuation, 156; live-stock and railroad valuations, 156; growth of Leadville, 156; sanitary neglect and ignorance, 157; railroad feud, 158; victory of the Santa Fé line, 158; the Grand Cañon railroad war, 159; engineering on a war footing, 159; legal and military railroad tactics, 160; the grandeur of the gorge and its engineering difficulties, 160; Leadville's carbonates, 161.

Commerce, *International*.—Growth of modern commerce, 161; annual increase of British exports, (1836-'72), 161; increase of French exports, 161; of American (1835-'72), 161; influence on commerce of the gold discoveries, 162; the present aggregate commerce of the world, 162; table of *International* commerce, 162; the late crisis, 163; attributed to contraction, 163; the world's stock of precious metals, 163; evils of silver demonetization, 164; demonetization imperils the solvency of debtor nations, 164; the public debts of the world, 164; the signs of depression in France, 164, 165; exceptional prosperity of food-producing countries, 165; the international grain-trade, 165-167; England's food requirements, 165; table of grain exports from the United States to England, 166; production and exports of European countries, 166; do. of Australia and India, 167; the potato-trade, 167; the *International* trade in provisions, 167, 168; American meat exports, 167; hams and bacon, 167; lard, 167; pickled meat, 167; British imports of butter, 167; international cheese-trade, 168; American exports of fresh meat and live animals, 168; the sugar-trade, 169; production in the different countries of cane-sugar, 169; European beet-sugar product, 169; consumption of the leading nations, 169; wine-trade and production, 169; the different European crops, 169; champagne consumption, 169; French wine-culture, 169; crops and exports of other lands, 169; the tobacco-trade, 170; production and exports of the United States, 170; Havana elgars, 170; Manila cheroots, 170; the European crop, 170; European crops, 170; average consumption of different countries, 170; the German product and demand, 170; takings of the Italian Régle, 171; the cotton-trade, 171, 172; depression in 1873, 171; comparative statement of British manufacture and exports, 171; table of comparative cost and prices of manufactures, 171; table of the consump-

tion of raw and of manufactured cotton in all lands, 172; comparative table of manufacture in the leading countries, 172; the wool-trade, 172, 173; Australian wool, 173; comparative European imports, 173; woolen trade in 1877, 173; the silk-trade, 173; the world's production, 173; decreased export of French manufactured silk, 173; the coal and iron trade, 173, 174; retrospect of British coal-mining, 173; the world's product of raw iron, 173; do. of manufactured, 174; table giving the increase of manufactures in all countries, 174; the British puddling-trade, 174; Bessemer production, 174; the petroleum-trade, 174, 175; British trade review, 175-178; signs of depression in England, 175; failure of the City of Glasgow Bank, 175; Parliamentary investigation of the Stock Exchange, 176; comparative prices of leading commodities, 177; recent fluctuations, 177; values of British imports in 1878 compared with 1877, 177; export and import trade for nine months of 1879, 178; growth of the foreign trade of France, 178; French trade in 1878, 179; exports and imports for eight months of 1879, 179; fluctuations of values on the Bourse, 179; Belgian trade in 1877, 179; review of trade in Germany, 180; classified table of exports and imports for three years, 180; the new German tariff, 180; Italian trade in 1877, 181; statistics for six months of 1879, 181; the foreign trade of Egypt, 181; the trade of British India, 181, 182; table of exports and imports for twelve years, 182; British imports of silver and shipments to the East for twelve years, 182; the foreign commerce of Canada, 182; table for ten years, 182; the trade of 1878, 182.

Commerce of the United States.—Its magnitude, 182; oscillations of the balance of trade, 183; enormous recent excess of exports, 183; growth of American commerce, 183; decline of American shipping, 184; recent development in the exportation of raw materials, 184; crops of 1879, 184; free trade or protection, 184; table of exports of manufactured products, 185; table showing American commerce with the different countries for a series of years, 185; table showing the share of the different countries in American commerce in 1873, 186; character of the trade with the different countries, 186, 187; America's exports of finished products, 188, 189; the neutral markets, 188; honest goods, 188; tasty packing, 188; American cottons, 188; American hardware in England, 188; new products, 189; trade for nine months of 1879, 189.

Communists.—The French amnesty bill, 389; the number pardoned, 393.

Congregationalists.—Statistics, 189; missionary meetings, 190, 191; missionary labors among the Indians, 190; Chinese immigration favorable to evangelization, 190. British Congregationalists: statistics, 191; annual meetings, 191. Irish, Scotch, and French Congregationalists, 192.

Congress, United States.—Third session of the Forty-fifth, 193; list of Senators and Representatives, 198.

In the Senate, resolution to inquire into the late elections, 194; the white Southern population alone represented in Congress, 194; allegations of fraud and violence in Southern elections, 194, 195; charges of violation of the fourteenth amendment, 195; Thurman's counter-amendment touching dismissions from office on account of politics, party assessments, and deputy marshals and supervisors, 196; his speech, 196-198; Lamar's reply to Blaine, 199, 200; the solid South not in antagonism with the country, 199; dispute on the question of unequal representation, 200, 201; the investigation to include the conduct of State and Federal election officers, 201; to be referred to a special committee, 202; open sessions objected to, 202; Southern Senators demand open doors, 203; their amendment lost, 204; customary to leave to

the discretion of investigating committees the question of public or secret sessions, 205; a second amendment requiring open sessions rejected, 206; the amended resolutions, 206; denunciation of roving investigating commissions, 206; the resolutions agreed to, 207.

In the Senate, text of the bill to regulate the counting of Presidential vote, 207, 208; the Constitution on the subject, 208; the right to appoint electors inheres in the individual States, 208, 209; after the electors are selected in the manner determined by the Legislature a State has no control over their action, 210; they are then officers of the United States, 210; the bill defines the mode of procedure in the legitimate action of Congress regarding the count, 210; the power of counting and determining the validity of electoral votes not a function of the President of the Senate, 211; every executive act implies an exercise of judgment, 211; the bill assumes that a power of authenticating the votes rests with the two Houses of Congress, but does not define its extent, 212; the procedure in the case of imperfect or conflicting returns, 213; action upon objections of members of both Houses to counting a vote, 213; it is competent to the States to settle election disputes in their own tribunals, 213; the language of the bill offers an opportunity to fraudulently disqualify a proper return, 213; evil of leaving the country in suspense as to the actual results of an election, 214, 215; two rules for returns according as they are or are not adjudicated upon in the States, 216; danger of allowing a Senator and a Representative to challenge returns, 216; legislation on the subject unconstitutional, 216; the language of the Constitution clear and conclusive, 217; a joint rule all that is called for, 217; improbable that the deciding power was delegated to the President of the Senate, 218; the motive of the bill to confirm the rights of States to legitimate electors, 218; the bill passed, 218.

In the House, text of a bill to restrict Chinese immigration, 218; Congressional legislation can rescind treaty obligations, 219; the courts upon the subject, 219, 224; previous efforts to prevent the influx of Chinamen, 219; defects of the Burlingame treaty, 220; hardship of Chinese competition, 220; memorial of Californian workmen, 220, 221; case of special pledges not to legislate on a treaty, 222; the bill passed, 222; the Chinese bill in the Senate, 222; amendment providing for a new treaty with China, 222; only a question of expediency, 222; bad faith of abrogating the treaty, 223; amendment lost, 223; passage of the bill, 224; veto message of the President, 224-226; failure of the House to pass the Chinese bill over the veto, 226.

In the House, the army appropriation bill, 226; the question in previous Congress of attaching general measures to appropriation bills, 227; the action of the special sessions, 228; the question of reorganization and economy and the *posse comitatus* clause, 228; the latter should be revised, not repealed, 229; section 2002 of the Revised Statutes on "keeping the peace at the polls," 229; the British statute forbidding the presence of soldiers at elections, 229; provisions of British mutiny act, 230; amendments of sections 2002 and 5528 of the Revised Statutes attached to the appropriation bill, 230; struck out in the Senate, 230; the clause allowing troops at the polls a war measure dangerous to popular liberty, 231; previous conference negotiations on the measures in dispute, 232; time enough for the proposed legislation in the next Congress, 232; the obnoxious laws were directed against interference with elections, 233; they have not prevented free elections, 233; Republicans accused of legislative filibustering, 233; the bill fails to pass, 234.

In the House, the legislative, executive, and judicial

appropriation bill, 234; amendment abolishing and refusing pay to deputy marshals and supervisors of elections, 234; Democratic interests involved in the measure, 234; Republican arraignment of the Democratic party, 235; limited suffrage in Rhode Island, 235; Democratic counter-charges, 235; the colored vote not the property of the Republican party, 236; it is time that war measures were repealed, 236; Davenport's arrests of voters in New York, 236, 237; the act decided illegal in the case of a duly naturalized citizen, 237; dangers of similar arrests to defeat fair elections, 238; three propositions contained in the amendments, 238; removing the limitations on jury-panels, 238; making jury-trial political, 238; destroying the safeguards of the ballot-box, 238; demanded by the South, 238; the laws to be repealed obnoxious to the constitutional sovereignty of the States, 239; the statute conferring the powers of marshals and deputies at elections, 239; its tyranny, 239; the demanded repeal not a Southern measure, 240; Republican determination to uphold the laws, and Democratic responsibility for the emergency of an extra session, 240; arbitrary power and acts of marshals adjoined, 241; Democratic declaration that appropriations shall be withheld until the grievances are redressed, 241; the amendment carried, 241; the second amendment appointing a commissioner of opposite politics from the clerk of a court to select half the names to be drawn for juries, 241; amendment carried, 242; the next amendment, abolishing supervisors and deputy marshals, carried, 242; the bill passed with the amendments, 242; the bill and amendments in the Senate, 243; the clause requiring jurors to be drawn from both parties stricken out, 244; a conference committee, 244; no agreement on the repeal of the juror's test-oath, 244; nor on the repeal of the laws appointing marshals and deputies, 245; the evil effects of these laws, 245; impossible for the House majority to recede from their position, 246; the evils of an extra session, 246; a bill already passed by the Senate repealing the test-oath, 247; Democrats charged with the purpose of precipitating an extra session, 247; answer that a motion to suspend the rules and pass the repeal measures was defeated by a solid Republican vote, 247; the Speaker's adjournment speech, 247; review of the conference presented to the Senate, 248; Democratic agreement that if an extra session should be necessary separate bills embodying the repeal measures should be immediately brought forward, 248; the Senate refuse to withdraw from their position, 249.

Extra Session.—The President's proclamation calling an extra session, 249; his message defining its objects, 249; list of Senators and Representatives of the Forty-sixth Congress, 249-251.

In the House, bill making appropriations for the army presented, 251; the same bill that was considered in the regular session, 251; the clauses forbidding the presence of troops at the polls, 251; the calling out of troops to suppress insurrection different from keeping peace at the polls, 251; a marshal calls for troops as a *posse comitatus*, not as the army, 252; no such use of troops known until after the war, 252; the import of the repealing clauses, 252; let the vestiges of the war be effaced, 252; Congress may declare that the Executive shall not use the army for a particular purpose, 252; the law which it is desired to amend was originally introduced by a Democrat, 253; the words "to keep the peace at the polls" were added as an amendment, 253; the amendment was accepted by the Democrats, 253; not approved, as alleged, by eminent Democrats, 254; the custom of appending general measures to appropriation bills inaugurated by a Republican Congress, 254; Republican coercive measures in 1856

and 1867 adduced, 254; legislation in appropriation bills should never be resorted to except in extreme cases, 254; recapitulation of the differences between the Senate and the majority of the House, 253; the right to incorporate general legislation in appropriation bills settled, 255; the use of troops at the polls interferes with the voting power whose control is guaranteed to the States by the Constitution, 255; recent Supreme Court decision denying any right of interference except in the case of a breach of the fifteenth amendment, 255; interpretation of Article I., section 4, of the Constitution, 256; the time, place, and method of voting only can be determined by Congress for Congressional elections, 256; troops can only be called out to repel invasion, or at the request of a Governor to suppress domestic violence, 256; the supervisors of elections have the power to interfere also in local elections, 256; the supervisors may arrest on suspicion of an intention to commit an offense, contrary to the principles of common law, 257; the proposed repeal prevents United States officers from summoning an armed posse to preserve peace at the polls, 253; the United States authorities have jurisdiction to insure rights which the United States has guaranteed, 258; the United States has bestowed on voters for the State Legislature the right to vote for members of Congress, and is bound to secure them in that right, 258; the power which it is proposed to abrogate net military but civil, 255; the President and the Senate represent the people equally with the House of Representatives, 259; coercion by withholding supplies unconstitutional and revolutionary, 259; the bill passed, 259; the bill in the Senate, 260; amendment offered making it penal to carry weapons at the polls, 260; the reenactment of the section of the Revised Statutes without the obnoxious words declared to be a Democratic *ruse* to convey the impression that it is a fresh measure, 260; insignificant number of troops stationed east of Omaha, 261; the question a manufactured issue, 261; calculated to impair the good name of the country abroad, 261; the measures concocted in a party caucus, 262; civil officers restrained from enforcing the election laws by the proposed repeal, 262; the measure defended on account of the principle involved, 263; not designed to avert an immediate danger, 263; question of the dangers of military encroachment as viewed in the early days of the republic, 263; the arbitrary arrests in New York again, 264; the bill passed, 265; the President's veto of the bill, 265-268; there can be no military interference at elections under existing laws, 266; the effect of the bill is to prevent civil officers from employing adequate civil force to carry out a number of United States laws, 266; the bill makes a material change in the election laws which have nothing to do with the use of the army, 267; the attachment of legislative measures to appropriation bills is a new principle changing the system of the United States Government, 267; calculated to destroy the independence and equality of the different branches, 268.

In the House, the bill failed to pass over the President's veto, 268.

In the House, a new appropriation bill brought forward, 268; a clause forbids the payment of money to troops employed as a pellee force at the polls, 268; passed by both Houses and approved by the President, 269.

In the House, a bill to prevent military interference at elections, 269; a substituted bill allowing the presence of troops to suppress forcible obstruction of a free election, 269; the substitute defeated, 269; the original bill passed, 270.

In the Senate, an amendment to punish the carrying of concealed weapons at elections withdrawn, 270; the high

tide of State rights marked, 270; a reaction against the spirit of the Union, 270; repetition of the tactics of the repeal of the Missouri Compromise, 271; caucus dictation, 271; Northern sentiment aroused in opposition, 271; the bill passed, 272; the President's veto of the bill, 272, 273; no legislation needed, 272; ancient and fundamental statutes whose enforcement is prevented by the bill, 272; operation of statutes relating to extradition, neutrality, Indian reservations, etc., also likely to be defeated, 273; subordination of national authority, 273.

In the House, failure to pass the bill over the veto, 274.

In the House, legislative, executive, and judicial appropriation bill, 274; the previous House bill with the money appropriations agreed on in conference, 274; the statute creating supervisors of elections, 274; the statute authorizing appointment of deputy marshals with powers to arrest without warrant, 274; the Constitution on personal liberty, 274; Congressional report on the failure of the act to secure fair elections, 274; the number and cost of supervisors and deputy marshals in 1876, 274, 275; evil character of the men, 275; the United States a nation, not a confederacy, 276; Congress appointed by national electors, 276; the Constitution adopts the State voters, but the right of suffrage emanates from the nation, 277; the fourteenth amendment specifically creates United States citizens, 277; the constitutional provision empowering Congress to regulate the place, time, and manner of elections implies the doctrine, 277; the supervisors law different for cities and for the country districts, 277; the purpose of the bill to obliterate this distinction, 278; passage of the bill, 278; the bill in the Senate, 278; the bill a party manoeuvre, 278; violence in the South, 279; conciliatory sentimentalism, 279; leniency to secessionists after the war, 280; fewer Unionist than Secessionist soldiers in Congress, 280; a solid North against a solid South, 280; Southern Senators a majority in the Democratic caucus, 280; alleged signs of Southern aggression, 281; idea that civil rights must be protected by military power, 281; no standing army necessary to protect the people from domestic violence, 282; movement to kindle sectional jealousy, 282; false representations to induce colored people to emigrate, 283; alleged design to consolidate the North against the South, 283; reported efforts to procure the Presidential veto, 283; which party refused the appropriations? 284; the general legislation attached to the bills proper in form and correct in principle, 284; does New York call for military protection? 285; the war of secession a conflict between nationalism and federalism, 285; sectionalized by slavery, 285; secession an exploded heresy, 285; the Democrats in the war, 285; extravagant claims of the extreme nationalists, 286; no treason to demand a return to true American principles, 286; the motives of secession, 287; the South demands the Union of Madison and Webster, 287; Chandler's famous letter, 288; secession times recalled, 288; rule or ruin, 288; the bill passed, 289; veto of the President, 289, 290; the general clauses destroy all control of the Government over Congressional elections, 289; validity of the election laws, 290; irregularities in New York elections, 290; stricter national supervision of elections required, 290; bill not passed over the veto, 291; a substitute bill in the House, omitting the general legislation and omitting judicial appropriations, 291; the bill passed, 291; amended in the Senate, 292; settled by a conference, 292.

In the House, a supplemental judicial appropriation bill, 292; payment of deputy marshals withheld, 293; contracts pledging future appropriations forbidden, 293; the Junior's test-oath repealed, 293; Attorney-General's unusual method of reporting the expenses of the office,

- 298; the bill passed, 294; passes the Senate, 294; the President's veto, 294.
- CONKLING, ROSCOE.**—American statesman, 295; life and career, 295, 296; speech on resolutions to investigate recent elections, 201, 202; amendment to Chinese immigration bill, 222; on the judicial appropriation bill in extra session, 278-281.
- Connecticut.**—Governor and State officers elected by the Legislature, 297; United States Senator elected, 297; winter sessions unpopular, 298; laws recommended by the Governor, 298; act to simplify legal processes, 299; a tramp-law, 299; laws on behalf of women defeated, 299; defeat of constitutional amendments, 300; election for the Legislature, 300; State finances, 300; savings-banks, 300; education, 300; public institutions, 300; militia, 300; divorces, 301; the New York boundary difficulty, 301.
- CORONINI, Count FRANZ.**—President of the Austrian Reichsrath, 301; life and political career, 301.
